Crops.—Cacao commences to bear fruit about the fifth year, two crops a year being then gathered. The "Spring" crop picked in May, June, and July is small. The main or "Autumn" crop is gathered in November, December, and January. The period from the blossom to the ripe pod is five months. The average crop per acre varies considerably in Ceylon. The general average is about 3½ to 4 cwt. per acre, although the yields from some well-cultivated estates have reached the very high annual average of 8½ cwt. per acre.

Cultivation.—The usual method of cultivation is to fork the soil every two years, and apply about 700 to 800 lb. per acre of artificial manures two to three months later. The manure used is a general mixture containing nitrogen, phosphoric acid, and potash.

Pruning and Removing Suckers.—Suckers are removed as soon as they appear on the cacao trees, and periodical pruning is done when the foliage becomes too thick and heavy.

Weeding.—Cacao estates are kept clean weeded from the time of opening, the average cost of weeding is about Rs. 6 per acre per annum.

Picking.—The flowers and fruit of the tree grow in a characteristic manner direct upon the trunk and branches of the trees. The fruit

* The average prices for 1928 to 1936 are for top grades only. Averages for other years represent the lowest and highest overall weekly quotations received for all grades.

is ellipsoidal and of considerable size, and the beans are covered with pulp or mucilage. Ripening is generally indicated by a change of colour on the outside of the pods. The fruit on the stems and main branches is picked by means of an ordinary pruning knife, while that on the higher parts of the tree is dealt with by cacao hooks. The picking gang goes round as often as necessary, the period generally being between a fortnight and three weeks. The pods are cut down by men or boys, who are followed by women, who gather the pods and heap them together. The fruits are opened the same day, and the beans carted or carried to the fermenting shed. One labourer will pick 1 to 1½ bushels of wet beans per day. This is equal to about 37 lb. of the cured product.

Fermentation.—At the fermenting shed the beans, covered with mucilage, are heaped into boxes or vats for fermentation. This process is accompanied by rise of temperature and by decomposition of the pulp surrounding the beans. During the fermentation the pulp becomes more liquid and gradually flows away, the bottom of the fermenting boxes being perforated and raised off the ground to admit of this. The period of fermentation in Ceylon is about 36 hours. After 12 hours the beans are given a light washing and turned over into another box. They are again given a heavier washing at the end of the fermenting period of 36 hours, when they are carried or carted to the barbecue or curing house.

Curing.—The best method of curing is the gradual drying of the beans in the sun on barbecues covered with coir matting. By this method the best quality is obtained. The period varies from five to seven days, according to the temperature. Most of the picking has, however, to be done during the wet season, and a greater part of the crop is cured by artificial means. The most popular curing house is a two- or three-floor building, the floors being constructed of strips of wood covered over with coir matting, on which the freshly-fermented beans are spread. The building is heated with hot air conducted by pipes placed under each floor, the hot air being obtained by means of a fan, which drives the air through the heating apparatus and then through the pipes. The temperature in the building during the curing process is kept between 110 and 120 degrees Fahrenheit.

Grading and Sorting.—After the beans are cured, they are sorted into different grades: first quality, which is composed of only the large round beans; second quality, flat and small beans; and third quality, known as garblings, consisting of the shells and broken beans.

Packing.—Cacao after grading is packed in bags (112 lb. to a bag) when it is ready for export. Most of the cacao from Ceylon is shipped, in this form.

Prices.—The 1935/6 main crop was a partial failure but this was offset to some extent by an abnormally large intermediate crop in the second and third quarters of 1936. The July to November average prices were much above export values, Colombo dealers and shippers heavily discounting the subsequent improvement in world cacao prices. The 1936/7 main crop opened in September, earlier then usual, with the promise of heavy harvesting which has since been bourne out by results.

From the production point of view the season is understood to have been most satisfactory, but from the traders' point of view it has been disappointing with prices mainly held above the correct parity and sudden heavy fluctuations.

During the year steps were introduced by Government towards improving the quality of small holders cacao. These efforts have met with some success and will no doubt be continued. Government have also installed a cacao fumigatorium in Customs premises to comply with the regulations of the Philippine Islands.

The yearly average price for 1936 of Rs. 33·72 is very satisfactory. It is hoped that this improvement will continue.

With regard to the export figures it will be noted that since 1930 exports to the United Kingdom have shown considerable variations. Many estates in the Island follow a policy of consigning their crops unsold to London when London prices are good as a result of small London stocks of Ceylon, and of selling locally when London prices are poor as a result of heavy Ceylon stocks there. This policy is thought to be responsible for the wide price fluctuations for Ceylon cacao and consequently for the large variation in the quantity exported from year to year. It is therefore suggested that it estates sell all their cacao in Colombo better and steadier prices would be obtained as a result of the proper distribution of supplies by the Colombo exporters to the best markets at the time.

Canada has been a good supporter of Ceylon cacao and provided Ceylon prices are kept at the proper parity, this market should continue and increase.

Exports to Denmark, Italy, and Germany show a considerable decline over the last few years and this must be mainly attributed to financial restrictions in these countries.

Business with Mexico is at a standstill owing to the difficulty of competing with the high protective duty favouring Tabasco cacao.

Ceylon's principal destination, the Philippine Islands, has taken far less cacao than usual, the imports in 1936 being down by over a million lb., as compared to the previous few years. This is attributed to the higher prices now asked by Ceylon. Manila has held off, waiting for lower prices, and has even imported some Accra cacao in place of Ceylon.

Average of the monthly quotations recorded by the Ceylon Chamber of Commerce for 1936 :—

(Estate No. 1 per cwt.)

	Rs. c.		Rs. c.
January	18 25	July	42 0
February	23 40	August	41 55

April	26 50	October	41 95
May	28 75	November	39 94
June	34 94	December	40 69

The annual average market prices* in certain years were :—1925, Rs. 32·17 per cwt. ; 1926, Rs. 30·41 ; 1927, Rs. 52·22 ; 1928, Rs. 58·89 ; 1929, Rs. 53·46 ; 1930, Rs. 37·51 ; 1931, Rs. 29·71 ; 1932, Rs. 27·71 ; 1933, Rs. 25·09 ; 1934, Rs. 22·99 ; 1935, Rs. 18·37 ; 1936, Rs. 33·72.

The value of the exports of cacao is shown in Diagram No. 9.

Cinnamon.

Cinnamon, once the main export, still occupies a place—though a minor one—in the trade of the Island. Plantation in earliest days was mainly confined to the Western Province, of which Negombo was

* The average prices for 1927 to 1936 are for top grades only. Averages for other years represent the lowest and highest overall weekly quotations received for all grades.

the most important centre. Much of this area was replaced with coconuts in subsequent years, but the extension of cultivation took place in the Southern Province where at the present time it is estimated that there is more land under cinnamon than in the Western Province. The approximate total acreage is 26,000 acres, of which 58 per cent. is in the Southern Province (Galle District 40 per cent.) and 41 per cent. in the Western Province (Negombo area 30 per cent.)

The industry is entirely in the hands of Ceylonese. The number of large properties of 100 acres and over in extent is limited and these receive systematic attention. The majority of plantations are small areas of 10 to 25 acres in extent.

The Tree.—The cinnamon tree may grow to the height of 20 to 30 feet, and the trunk may be upwards of 3 feet in circumference. The trees cultivated to produce the cinnamon of commerce are coppiced, and long willowy shoots are produced, growing to a height of about 10 feet and to the size of a fair-sized walking stick. The shoots are cut and the bark is peeled off, and rolled into quills, which constitute the cinnamon of commerce.

Cinnamon Cultivation.—If the soil is good, branches may be cut for barking from the fourth year. The tree blossoms in January, in April the fruit is ripe, and the cutting is done from May to October. When the tree is seen to bear fruit well it is in good health, and the bark will peel without difficulty. The sticks are gathered by boys and tied into bundles with coir strings ; they are then removed to the peeling stores.

The object of the methods employed is to make the bark up into quills, a quill being a rod of cinnamon resembling a thin cane 4 feet in length ; the pieces of bark when stripped are therefore placed round the sticks, both with a view to preserving their shape and as a convenience for the next operation.

Skinning.—They are now allowed to remain for three to six hours, when fermentation takes place, and the bark is ready for skinning. This treatment of the bark leaves only that part which has the desired delicate taste ; it is of a pale yellow colour and a parchment-like texture. The bark is now left to ferment and dry, which if the weather be favourable takes about 30 minutes.

The next process is that of forming the quills. The smaller pieces are inserted into the larger, and in the process of drying the quills form rods. They are afterwards rolled into shape and made up into bundles.

Cinnamon oil is distilled from the chips and trimmings of the quills as well as from the leaves.

The commercial cinnamon products are the quills, the chips, and the oil. The best quality is fine cinnamon prepared from tender bark.

The chips are prepared by scraping or chipping the bark after removing the outer bark.

Prices.—The year under review started with a revival of demand. After a rise over the New Year prices for all grades fluctuated within narrow limits during the first six months. During this time there was a regular demand from all markets which improved with the increase of supplies in May and June. During the two months following, orders from America improved to such an extent that coarse cinnamon, mainly No. 2, was taken up at daily rising rates.

Copyright Photograph *Lionel Wendt.*

COLOMBO MORNING.

Although the crop was better than in 1935 No. 2 touched at its highest 38 cents per lb., as against 35 cents per lb. the previous year. In several districts this demand led to harvesting in August and September which resulted in a decrease of arrivals during November and December, but even this did not prevent the usual drop of prices towards the close of the year.

The American market which showed itself to be more and more the biggest influence on the trade reduced its ideas in December to 28 cents for No. 2. This, however, was not generally met at this end.

While the market for coarse cinnamon can be regarded as having taken a normal course during 1936, conditions for fine cinnamon (0/0000) were less favourable. Spain being the principal buyer for these grades, the demand from that quarter dropped to a minimum with the outbreak of Civil War. Fortunately producers were just about able to get rid of the crops collected during May and June and a considerable pressure of arrivals was therefore not felt too seriously. Small quantities were taken up by shippers during the last three months of the year at declining prices.

Exports in 1935 to Spain amounted to about 7,500 bales which decreased to 3,300 bales in 1936.

If the Civil War continues, a further drop will be inevitable which is not likely to be offset by an increase in demand from other countries, and producers will probably have to face very unfavourable conditions.

The market for cinnamon chips has been well supported by regular demand and prices rose steadily during the year. Exports increased from 7,537 cwt. to 7,974 in 1936.

Average of the monthly quotations recorded by the Ceylon Chamber of Commerce for 1936 :—

	Quills (Fine 0-0000 per lb.) Rs. c.	Chips* per candy of 5 cwt.) Rs. c.		Quills (Fine 0-0000 per lb.) Rs. c.	Chips* per Candy of 5 cwt. Rs. c.

The annual average market prices† of quills in certain years were :—1925, 88 cents per lb. ; 1926, Re. 1·14 ; 1927, Re. 1·35 ; 1928, Re. 1·29, 1929, Re. 1·15 ; 1930, 59 cents ; 1931, 37 cents ; 1932, 28 cents ; 1933, 25 cents ; 1934, 29 cents ; 1935, 35 cents ; 1936, 37 cents ; of chips : 1925; Rs. 84·54 per candy ; 1926, Rs. 93·79 ; 1927, Rs. 102·77 ; 1928, Rs. 105·72 ; 1929, Rs. 96·86 ; 1930, Rs. 56·41 ; 1931, Rs. 38·92 ; 1932, Rs. 26·40 ; 1933, Rs. 20·64 ; 1934, Rs. 30·64 ; 1935, Rs. 27·69 ; 1936, Rs. 33·75.

An acre will yield about 120 lb. quills.

Citronella Oil.

Citronella oil grass is a large coarse grass growing 3 to 4 feet high, cultivated in Ceylon (and of late years in Java) for its essential oil, which is obtained from the leaves by distillation. The grass grows in

* Sifted free from sand and dust (in bags of 56 lb. nett).

† The average prices for 1927 to 1936 are for top grades only. Averages for other years represent the lowest and highest overall weekly quotations received for all grades.

any ordinary soil, and thrives best in a moist and hot atmosphere. It flourishes up to an elevation of 2,000 feet, but its cultivation is confined entirely to the Southern Province where the acreage under this crop is estimated to be 33,000 acres, of which 62 per cent. is in the Matara District and the remaining 38 per cent. in the Hambantota District. Cultivation is in the hands of the Ceylonese. The grass is readily propagated by division (seed being rarely produced), and may be planted about 2 by 3 feet apart in rows. Permanent shade is unnecessary, and the cultivation is very simple, weeding being the chief requirement. The clumps are ready for cutting in about eight months from time of planting. Two cuttings a year may be obtained, and about 40 lb. of marketable oil per acre is an estimated annual yield. The oil is of a strong aromatic odour; it is exported for use in scenting soaps, perfumery, &c., and is also a preventive against the bites of mosquitoes and leeches.

Prices.—For the first seven months of the year the market was very weak, showing a steady fall month by month.

Prices opened at 38 cents per lb. in January, falling in February to 37 cents, and in March/April to 35 cents. In May, June, and July the ruling value was 33–34 cents. In August the market improved to 37 cents and in September to 44 cents, remaining at about that level till the end of October. In November there was a further rise to about 64 cents and the year closed with a strong market, the price rising rapidly to 75 cents per lb. at the end of December.

Shipments were 1,271,039 lb. in 1936, against 1,399,764 lb. in 1935, exports to the United Kingdom, Australia, and India all showing a falling off.

Tobacco.

Acreage and Localities.—The estimated acreage under this crop in the Island is 14,000 acres, of which a little over half is found in the Jaffna District of the Northern Province, where great care is given to cultivation. The methods adopted are peculiar to this area and the manufacture of the leaf gives rise to the most important industry in the district. Another variety of leaf is grown in the Central Province which claims about 21 per cent. of the total acreage under the crop. Dumbara in the Kandy District is a particularly favoured area, while in the Matale District the crop is of some importance to the peasant, besides there being a small manufacture of cigars and pipe tobacco from the local leaf as in the case in Dumbara. Tobacco is also grown to the

extent of about 1,500 acres in the Kurunegala District where the method of manufacture to produce a chewing tobacco differs from that adopted in Jaffna. Elsewhere cultivation is carried out in the North-Central and Eastern Provinces to less extents.

Dumbara Tobacco.—A high grade of Ceylon tobacco is grown in the Kandy District. The cultivation in this district begins with the slight showers of the early months of the year, and depends for its success upon the light rains which fall in April, May, and June with the advent of the south-west monsoon. Tobacco is rarely grown in this district upon the same land in two consecutive years, it being customary to cultivate the land in other crops and then to allow it to lie fallow for some years before another tobacco crop is taken off. In very dry weather, if water is available, hand watering is resorted to. Otherwise the crop depends entirely upon rainfall for its success, and is a speculative one. Fairly satisfactory attention is given by some growers to curing and fermentation, but a finer product would be procured if greater care were given to manufacture.

The leaves of the Dumbara tobacco burn with a good white ash, and are manufactured in the Island into cigars, which command a ready sale, and would be in greater demand if they were more uniform in quality. A large portion of the Central Province crop is sold to local manufacturers of cigars for use as wrappers for the Jaffna types. The leaves are smaller and of finer texture than the Jaffna types, and have good burning qualities.

The Dumbara types of tobacco are also grown in other districts. The system of curing and fermenting differs somewhat in different areas, and the final product is not of such high quality as that produced in the Central Province.

Jaffna Tobacco.—The Jaffna types consist of two kinds. These are locally known as the smoking and chewing kinds. Both are large-leaved, coarse tobaccos, the chewing type being of more vigorous and coarse growth than the smoking type.

Jaffna Cultivation.—The cultivation of tobacco at Jaffna is an interesting study. The lands are well ploughed and manured with cattle or sheep manure or with green leaves, and reduced to a fine tilth. Nurseries for seedlings are well prepared, and the seedlings planted out carefully and systematically. Work begins with the north-east rains, and during the early part of the growing period the rainfall may be sufficient to maintain satisfactory growth. During dry weather and from the end of December onwards the tobacco plants are irrigated by wells. In the middle of the growing season this irrigation has to be thoroughly carried out. During the early part of the growing period thorough cultivation of the land is carried on, so as to prevent its becoming " caked " and to allow of the maximum growth for the plants. All plants, except those required for seed purposes, are topped at a height of about 4 feet, and when they begin to yellow they are harvested. The whole plant is cut down and allowed to " quail " for a day in the sun. In the afternoon the plant is separated into individual leaves, each being left attached to a piece of the stem. These are then taken for withering in an open shady shed. Fermentation differs slightly in different localities in its details, and the curing of the smoking and chewing types requires different treatment. Chewing types are harvested by cutting of the leaves, commencing from the top of the plant. All inferior broken leaves and those

portions of the stalks which are not attached to the leaves are either sold to the manufacturers for making nicotine extracts or are used for manurial purposes. Conditions of sale demand that portions of the stalk should be attached to the leaves in the majority of cases.

There are certain lands on which the chewing type alone can be cultivated, while others are well known for their production of high grade smoking types. Tobacco from certain localities always commands higher prices than the ruling market rates, while elsewhere only a low grade tobacco is produced. The smoking tobaccos are sold to manufacturers for the local manufacture of what is known throughout the whole Island as the " Jaffna cheroot ". Some of the chewing types are sold locally for chewing with the betel leaf, lime, and arecanut, but the bulk of this type is exported to Travancore, where the Jaffna tobaccos are eagerly sought after. Travancore has fixed a quota for Jaffna tobacco. Jaffna tobacco growers have organized themselves into a co-operative society and plans are being made to establish a selling agency at Travancore.

In 1936, more than 99 per cent. of the exports of unmanufactured tobacco went to British India, while manufactured tobacco was exported mainly to the Maldive Islands.

The costs of cultivation of a tobacco crop in the Jaffna District are heavy, considerable sums being expended upon manures, cultivation and irrigation. In seasonable years, when prices are high, the profits are large. In other years expenses are barely covered, but in general the better lands will yield average profits of between Rs. 300 to Rs. 450 per acre, while profits of Rs. 600 to Rs. 800 per acre have been secured in good years. The average price of the Jaffna product varies from Rs. 20 to Rs. 40 per 1,000 leaves.

The Travancore markets some fifteen years ago closed to Jaffna tobaccos, but were subsequently reopened. The critical situation demanded that experiments with other types of tobacco should be undertaken. These have been carried out upon a Government experiment station, and it has been demonstrated that White Burley tobacco of good quality capable of realizing 1*s.* 6*d.* per lb. on the London market can be satisfactorily grown. The Government has evolved a purchase scheme for White Burley tobacco which is exported to England. The exports of this tobacco have been as follows :—

Year.	lb.	Year.	lb.	Year.	lb.
1924	.. 4,701	1928	.. 30,688	1932	.. 10,901
1925	.. 15,057	1929	.. 25,312	1933	.. 14,933
1926	.. 18,535	1930	.. 18,652	1934	.. 22,060
1927	.. 13,328	1931	.. 9,212		

On and after 1931 the quality exported and the prices realized for White Burley tobacco in England have not been encouraging. After the year 1935 the experiment in the cultivation of White Burley tobacco in Ceylon was abandoned in view of the deterioration in the quality of the tobacco sent to London and no White Burley tobacco is at present under cultivation.

Cardamoms.

Uses.—Cardamoms are of commercial value on account of the spice obtained from them, which is well known to cooks and confectioners, and is used in pharmacopoeia as a deadener of tastes and a medicine.

Habitat, &c.—The commercial value of the plant lies in the fruit, which is borne on racemes rising from the ground. The plant itself—*Ellettaria Cardamomum*—grows in stools or clumps under the shade of forest trees at elevations between 2,800 and 4,000 feet, with a rainfall of 115 to 150 inches a year.

Manufacture.—The fruit is collected by women and children, and is manufactured into either (1) bleached or (2) green dried. In the former case the fruit is bleached, soaked, and dried in sulphur fumes, the process being repeated until the required pale colour is secured, and the ends are clipped off either by hand or by a clipping machine. In the latter case the fruits are merely dried in the sun.

Acreage.—The total acreage under cardamoms is estimated to be 6,000 acres, of which 82 per cent. is confined to the Central Province—approximately 2,500 acres in the Kandy District, 1,500 acres in the Nuwara Eliya District, and 1,000 acres in the Matale District. About 1,000 acres are found in the Kegalla and Ratnapura Districts (Province of Sabaragamuwa). The bulk of the plantations is in the hands of European owners, but the number of small gardens of a few acres in size in the hands of peasants is not inconsiderable.

Prices.—The market for all descriptions was strong and prices improved steadily right throughout the year except during September when an irregular tone was in evidence and rates receded a little. Values at the close of the year were rather more than double the figures ruling at the beginning, and it is anticipated that this will continue until the next crop comes along.

The partial failure of the Indian crop accounted for the steady rise in prices and Ceylon supplies were also below the average in quantity.

The attractive prices paid for Greens apparently discouraged bleaching, as a noticeable feature of the market was the scarcity of the latter descriptions.

Quality in the aggregate was below the normal standard and the high values produced a lot of immature cardamoms, but these did not suffer much in the prices obtained owing to the strong competition for supplies.

The presence of extraneous matter in decorticated (or seed) cardamoms raised a protest from the U. S. A. and the fear of having shipments rejected has forced shippers to pay more attention to this grade.

The near eastern and eastern markets absorbed about 50 per cent. of the year's crops, the balance being divided between the U. S. A. and Europe.

* The average prices for 1927 to 1936 are for top grades only. Averages for other years represent the lowest and highest overall weekly quotations received for all grades.

Arecanuts.*

Conditions.—The arecanut palm is grown in all village gardens in the wetter districts of the Island. It produces heavy crops of fruits, and provides straight stems, which are used for the erection of temporary structures. Pure cultivations of the palm similar to those to be found in Southern India are rarely seen in Ceylon, although in the Kegalla District there are some fairly extensive pure plantations. The area under arecanuts is about 69,000 acres.

There are several varieties of arecanuts grown, and the respective values of these are well known to the purchasers of fruits. Little care is, however, taken in the selection of fruits for planting, and no attempts have been made to improve the local types. Planting of arecanuts still continues in village holdings, but in many instances this palm is being replaced by the coconut.

The Fruit.—The fruits of the arecanut palm are harvested when ripe, and are sold in their unhusked state in all the bazaars and markets of the Island. The dried product is also readily procurable in the majority of boutiques. It is cut into thin shavings, which are used for chewing with the betel leaf, lime, and occasionally tobacco, by most of the village population of the Island. The price of unhusked arecanuts is about 30 cents per hundred, of husked nuts 35 cents per hundred.

Arecanuts are generally exported to British and foreign India and the Maldive Islands, but practically the whole of exports in 1936 went into British India.

Foodstuffs.

Paddy or Rice.

If Hill paddy (*elvi*) is excluded, it may be said that the cultivation of paddy in Ceylon is based upon a plentiful supply of water. Not only are the plants dependent upon a good supply in all stages up to the ripening period, but the processes of cultivation in all parts of Ceylon, except some of the most northerly, are dependent upon it.

Rain-water Cultivation.—Cultivation without the help of irrigation is carried on, not only in dry districts like Jaffna, but also in wetter parts like the Kandy District. The success of the crop is entirely dependent upon a sufficient and reasonable rainfall, and upon the soil being capable of retaining the water for a fairly long period in order to tide over the rainless intervals. Should the rains fall after the paddy has been sown, the crop will perish, and then the cultivator must resow his field with a paddy which can mature in the remainder of the season, or lose the season entirely. Similarly, if the rains are late, the earlier maturing varieties of paddy must be sown.

Irrigation.—When paddy is grown under irrigation, the water may be supplied by springs, streams (*elas*), wells, or reservoirs ("tanks"). Cultivation under streams may be seen in the Central and Uva Provinces and under tanks in the drier Eastern, Northern, and North-Central Provinces.

Asweddumization.—In all cases where a system of irrigation is employed, the land must be "asweddumized", or prepared for paddy. Should the paddy area not be level, it is necessary to terrace it. This terracing is

* Although in point of value of exports arecanuts rank between rubber and cacao, this sub-section is inserted here, as the cultivation is not organized, and insufficient details are available regarding it.

brought to a high level of perfection in the hilly districts. Distribution channels convey the irrigation water to the upper plots, and drains carry off the surplus water.

Preparation for Sowing.—In the preparation for sowing, ploughing may be done in the dry, or if the rains fall or water is available, sufficient water may be allowed on to the field to soften the ground. This is then lightly ploughed by means of small wooden ploughs drawn by buffaloes or cattle. Small iron ploughs are also employed in some districts, and their use is slowly extending. In some districts and in some fields of considerable depth ploughing is not done, the preparation of the soil being carried out by puddling with buffaloes or by digging with hoes. During the first ploughing the weeds are partially buried. About ten to twenty days after the first ploughing a second ploughing is given. The weeds are then still further buried, and the ground made softer and muddier. Between the first and second ploughings in the Central Province green manuring is carried on. Leaves and twigs are buried at the second ploughing, and in some districts special green manure crops are grown for ploughing in. After a lapse of another week or ten days a third ploughing may be carried out. This is generally adopted in the Central Province, but in other provinces this third ploughing is not general. By means of this ploughing the soil is converted into mud of the consistency desired for sowing upon. Instead of the plough, buffaloes are often employed to trample the muddy soil until the desired consistency is attained. The mudding is followed by a rough levelling by means of the "*poruwa*", a levelling board dragged along by a pair of buffaloes or by cattle. This does not leave the surface smooth enough for sowing, so that it is followed by work with hand levelling boards. At the same time shallow channels are made to conduct the surplus water from the surface, which is now quite smooth. The field is then ready for sowing.

Manuring.—Artificial fertilizers, such as bone meal, have been applied to a certain extent in the past, but the use of ammonium compound of phosphoric acids is now being popularized. These are applied at the second or third ploughings or at the time of sowing.

Sowing.—Seed is usually prepared for sowing by soaking it in water for 24–36 hours. It is then placed in a flat heap on leaves of plantain or colocasia and covered so as to retain warmth and exclude air. At the end of two or three days, if germination is satisfactory, the seed will have begun to sprout. The sprouted seeds are then separated from one another and sown broadcast on the field.

A less common method is the sowing of unsprouted and untreated seed. This system is adopted in sowing for the *maha* season in Jaffna, and in the Eastern and North-Central Provinces. Paddy is sown in fields which are either completely dry or sufficiently moist to cause germination immediately. In the dry soils the germination takes place after the advent of rains. This system of sowing is followed on low-lying fields.

Although the advantages of transplanting paddy seedlings have been abundantly demonstrated, not much transplanting is done in Ceylon, except in the Central Province and Kegalla District of Sabaragamuwa. At present the cultivator prefers, in the majority of cases, to broadcast and then thin out. When the seedlings are well established, *i.e.*, in about six weeks from sowing, the fields are weeded by the women. At the same

time thinning out is done in places where the seedlings are too thick, some of those so removed being used to fill up gaps where the sowing has been too thin.

Transplanting.—In transplanting, the seeds are germinated as usual and then sown in specially prepared nurseries. When the seedlings are from four to six weeks old, they are removed from the nursery and planted at regular intervals in the fields. Although the expenses of working are increased, this is much more than counterbalanced by the increased yields obtained. The plants grow freely and weeds are partially smothered, any weeding necessary being very easily carried out. Transplanting cannot be carried out, however, when the water supply is not reliable, or when fields are excessively marshy.

The crop receives very little attention, apart from watering, weeding, and watching against birds, until the approach of the ripening period. When the plants begin to mature, they first take on a yellow colour, and, at this point, the cultivator drains the water from the field and allows the paddy to ripen.

Reaping.—Reaping is always done with the sickle, and the result is that a long and ragged stubble is left on the field. This remains until it is time to prepare for the next crop. The sheaves of paddy are put on one side as they are reaped and allowed to dry. After this, they are carried to the threshing-floor, which has been carefully prepared in readiness.

Threshing.—Threshing methods vary in different districts. In general, the dried sheaves are spread out on the threshing-floor, and buffaloes or cattle yoked together are driven over them round and round until all the grains have been rubbed off the stalks. The straw is then raked off, the paddy collected and handed over to the winnowers, who separate the empty grains from the good ones.

Seasons.—There are two paddy-growing seasons, both of which are made use of for the cultivation of the same tract of fields when sufficient labour and water are available. The Maha crop is sown from the end of August to the middle of October, according to the district. The harvest from this crop is reaped in February or March. The Yala crop season commences with sowing in March-April, the harvest being reaped in July to September. The corresponding Tamil seasons are called Munmari and Pinmari or Kalapokam and Sirupokam. Generally speaking, six and three months are required for the respective Maha and Yala crops. In some districts sowings take place between Maha and Yala seasons for a *meda* or *iddi* (Tamil) crop.

Improvements.—Considerable improvements in paddy cultivation can be effected. Transplanting could become more general, greater attention be given to manuring, the variety of seed sown, improved implements for tillage and the cleaner threshing of the crop. The Government, through the Department of Agriculture, has undertaken a considerable amount of research work in paddy in recent years as a result of which pure strains are now raised in cultivators' fields on thousands of acres especially in the North-Central, Northern, and Southern Provinces. These strains are giving increased yields up to ten bushels an acre over the kinds previously grown. Demonstrations of the value of manuring and seed supply through a system of Government and private seed farms are being widely organized.

Varieties.—The varieties of paddy grown in Ceylon fall into three groups, according to the time necessary for their maturing. In the first group come those paddies such as Mavi, Hatiel, and Suduvi, which take at least six months to mature, while in the second group come varieties such as Danahala, Murungan, and Balavi, which mature in three months or less. An intermediate class contains those varieties which mature in four to five months.

The "age" of a particular variety, however, depends largely upon climatic factors such as rainfall, temperature, and elevation, and it is quite a common thing to find the same variety requiring different maturing periods in different provinces, or even in two different situations in the same district.

Diseases.—Diseases and pests causing extensive loss to paddy in Ceylon are few in number. Insects do the greatest amount of damage, the chief of these being—

(1) The Paddy Bug, which sucks the milky juices of the young grain, which, for this reason, never matures.

(2) The Paddy Swarming Caterpillar also causes considerable damage on occasions, but can be readily controlled.

(3) The Paddy Stem Borer, which feeds within the stem and prevents the grain from setting.

Rice.—Paddy is converted into rice by pounding in a mortar. This work is usually undertaken by women, who receive a share of the rice husked for their work. Several small mills have been erected in the past few years, which have given fairly satisfactory results. It is possible for the milling of paddy in the Island to be considerably extended. A Grant's Self-contained Rice Mill has been erected at Anuradhapura by Government to determine the economic possibility of increasing the milling of rice. The results obtained so far have been satisfactory but longer trial is necessary before a definite conclusion is reached.

Acreage.—The area under wet land paddy in Ceylon is estimated to be 850,000 acres yielding approximately 12 to 13 million bushels of paddy (grain in husk) per annum. The greatest proportion of the acreage lies in the North-Western Province. But large extents are found in all the provinces.

Hill paddy.—Hill paddy or *elvi* is grown upon dry lands. It is usually cultivated upon hilly lands in districts where an abundant rainfall cannot be relied upon or in "chenas" on lands which are somewhat low-lying. Hill paddy is sown broadcast in lands which have been cleared and burnt. While the crop is growing the larger weeds are pulled out, otherwise no cultivation is carried on during its period of growth. Yields of hill paddy, if seasons are favourable, are generally heavy, and the rice from this type of paddy is highly prized.

Other Food Crops.

Chenas.—Many other food grains are grown in the Island. Except in the Northern Province, these are generally grown in "chenas"—areas of land covered with secondary forest or other vegetation, which are cleared and burned—which are either private or leased or granted by the Crown. The principal grains grown are kurakkan (*Eleusine coracana*), maize, Italian millet, *Paspalum* millet, and *Panicum* millet. Pulses are also grown in the chenas, the principal crops being green

gram, horse gram, and black gram. Gingelly (*Sesamum indicum*) forms an important chena crop particulary in the Jaffna, Anuradhapura, and Kurunegala Districts. Hitherto in addition to the utilization locally of the crop produced in the Island, gingelly seed, oil, and poonac had been imported from India to the value of Rs. 2 to 3 millions.

Edible tubers grow in abundance. These are known in the Island as yams, and include dioscorea yams, tannia yams, sweet potatoes, and manioc. Sweet potatoes are abundant in the Southern Province, while manioc or cassava has spread rapidly in all districts in recent years, and constitutes a general food. The preparation of tapioca might be possible in some districts if a good supply of pure water were available.

Plantains (bananas) of various types are largely cultivated, and are to be found in all markets. The largest area of plantains is to be found between Polgahawela and Rambukkana, but in recent years the bunchy-top disease has appeared and caused considerable damage. This disease now appears to be less virulent, and areas which suffered severely some years ago are now giving good crops of fruit.

Jak and breadfruit are important foodstuffs, while " jaggery " is made from coconut, palmyra, or kitul palms.

Vegetables and curry plants are generally cultivated throughout the Island, and markets are well stocked. Dried chillies are prepared in the drier districts, while onions are largely grown in some localities. Pumpkins, gourds of various kinds, and cucumbers are largely grown and find a ready sale in the various towns and village markets of the country. In the hills European vegetables thrive and are largely grown for transport by rail to the principal centres of population and to the shipping in Colombo Harbour.

Miscellaneous.

Cotton.—Considerable success was achieved in the efforts made to establish the cultivation of cotton as a peasant industry chiefly in the Hambantota District of the Southern Province and Matale District of the Central Province. Over 2,000 acres were cultivated in 1930 in the Hambantota District alone. Almost all the produce raised by the peasants was purchased by Government on behalf of the Spinning and Weaving Mills, Colombo, up to the end of the year.

The fall in prices and the unstable condition of the local spinning and weaving industry resulted in diminishing interest in cotton growing and only a small acreage was cultivated in 1932. Owing to encouragement given by the slightly higher rate offered for seed cotton by the Spinning and Weaving Mills for the 1932 crops, production has increased again during past three years. The Government purchase during the past three years is as follows :—

	Cwt.		Cwt.		Cwt.
1934 ..	956	1935 ..	1,311	1936 ..	3,063

Kapok.—Kapok is not grown as a pure crop, but is largely planted along the boundaries of fields and settlements and in some instances interspersed among other permanent crops. A regular trade is being conducted by petty dealers. The exports and their value during the past three years were as follows :—

	Quantity. Cwt.	Value. Rs.		Quantity. Cwt.	Value. Rs.		Quantity. Cwt.	Value. Rs.
1934 ..	6,986 ..	184,584	1935 ..	6,497 ..	176,948	1936 ..	8,191 ..	239,707

Copyright Photograph *Lionel Wendt.*

KANDY INDUSTRIAL PAVILION, 1936.

Kitul.—The fibre of the Borassus palm has always found a ready market, and in the past few years it has been used locally for the manufacture of brooms and brushes. The tree is not systematically cultivated, and is only indiscriminately distributed throughout the wetter districts of the mid- and low-country. The extent of trade in this product may be seen from the following figures :—

	Quantity exported. Cwt.	Value. Rs.		Quantity exported. Cwt.	Value. Rs.		Quantity exported. Cwt.	Value. Rs.
1934	1,963	78,876	1935	1,734	65,461	1936	1,524	52,877

Papain.—This is the dried extract obtained from the milk of the papaya fruit for which there has been a steady market in the past. High prices paid some years back were an encouragement to the cultivation of the papaw tree which forms a suitable catch-crop during the waiting period of return from tea or rubber. But many small pure plantations also sprang up, and though it has been surmised that over-production has been responsible for a big drop in the price of papain, it is more probable that the market was cornered to the detriment of the small producer. The crop was largely cultivated in the Kegalla, Kandy, and Kurunegala Districts, and the development of a profitable peasant industry was indicated. The following figures show the extent of the trade in papain :—

	Quantity exported. lb.	Value. Rs.		Quantity exported. lb.	Value. Rs.		Quantity exported. lb.	Value. Rs.
1934	103,778	590,849	1935	155,274	638,516	1936	227,963	447,165

Pepper.—The pepper vine is widely distributed throughout the wet low-country as well as in the Kandy and Matale Districts of the mid-country though systematic pure plantations are not established. It is grown against shade trees in certain tea and cacao estates, and is in evidence in practically every village garden. The Department of Agriculture is distributing rooted cuttings on an extensive scale in an endeavour to establish a profitable village industry. There has always been a steady demand for the crop which is handled mainly by petty traders. Prices went down badly during 1930 and for the most part of 1931, but at the end of the year the exports were heavy, and in view of indications that the market will be favourable, an extension of cultivation is being rapidly pushed forward. The trade in pepper has been as follows :—

	Quantity exported. Cwt.	Value. Rs.		Quantity exported. Cwt.	Value. Rs.		Quantity exported. Cwt.	Value. Rs.
1934	1,678	43,027	1935	183	3,837	1936	1,107	17,386

Coffee.—The hybrid varieties of Robusta Coffee which are practically immune from the coffee leaf disease, and have the advantage of coming into bearing earlier and of yielding more prolific crops have been cultivated successfully at several Experiment Stations during the past few years and have proved their suitability under varying conditions below an elevation of 3,000 feet. Much interest is being shown in this crop now, and besides numerous applications for seed and plants the Department of Agriculture is distributing seedlings on an extensive scale with a view

to establishing a new peasant industry in the following districts :— Kandy and Matale in the Central Province ; Kegalla and Ratnapura in the Province of Sabaragamuwa ; Galle in the Southern Province ; and parts of the Kurunegala and the Badulla Districts. The produce is disposed of entirely for home consumption.

The coffee berry borer (*Stephanoderes hampei*), a serious pest of coffee in certain other countries, was discovered in Ceylon for the first time in 1935. The attack appeared to be confined to the Balangoda area of the Province of Sabaragamuwa and it was hoped that by prompt action the spread of the pest might have been prevented. A campaign of wholesale removal of berries from all trees in the area was carried out with the valuable co-operation of owners and the local headmen. Since that time, however, the pest has been found to be very widely distributed in most of the coffee growing areas of the Island and the nature of its distribution suggests that it has been established in Ceylon for many years unnoticed.

The insect was declared a pest under the Plant Protection Ordinance, No. 10 of 1924, in December, 1935, but no compulsory measures for its control have yet been prescribed.

EXCISE.

Toddy and Arrack.

The production of toddy and arrack forms two important industries dependent on the coconut palm. For the formation of coconuts a large quantity of saccharine juice is supplied by the tree to the stalks which are enclosed in spathes. If the spathe is "tapped" before the nuts mature, and a pot attached to it, a quantity of the juice, varying from 6 to about 12 drams per day, can be collected in the pot. If lime is not used to prevent fermentation, the action of yeasts, which are present in the air or in the pot, will convert the sugar in the juice into alcohol, and the liquid will be converted into toddy, with an alcoholic strength of about 4 to 8 per cent. Toddy is also obtained similarly from the palmyra and kitul palms. It is sold in taverns under Government licence at rates varying from 48 cents to Re. 1·20 per gallon. A considerable industry depends upon the sale of toddy which attracts many of the smaller Ceylonese and Malayalee capitalists. The cost of toddy may probably be put at about 23 cents per gallon, and considerable profits are made when the sales are active.

The toddy consumption in 1935-36 was 4,667,299 gallons, compared with 4,817,463 gallons in 1934–35 the average consumption per head of population being ·88 and ·91 gallons respectively. The actual toddy revenue collected in the two financial years was Rs. 2,553,043 in 1934–35 and Rs. 2,526,905 in 1935–36 the revenue per head being 48 and 47 cents, and the revenue per gallon of toddy consumed 53 and 54 cents respectively. In 1936–37 the rents of 182 toddy taverns were sold for Rs. 2,223,871, a slight decrease on the amount realized from the rent sale of the 182 taverns for financial year 1935–36.

By the distillation of coconut toddy, the local spirit known as "arrack" is produced ; and this is sold, like toddy, in taverns licensed by Government. The whole of the distilling and sale of arrack is in the hands of Ceylonese capitalists. Distillation of arrack prior to 1923 was carried

CEYLON.

ANNUAL GENERAL REPORT FOR 1936 ON THE ECONOMIC, SOCIAL, AND GENERAL CONDITIONS OF THE ISLAND.

Correction Slip.

(*a*) *Page 51, paragraph 2, line 4*—

The words "about Re. 1·25 to Re. 1·50 per proof gallon" should read "about Re. 1·30 to Re. 1·80 per gallon at 27 degrees under proof according to variations in the prices he has to pay for his toddy, supplied on contracts".

(*b*) *Page 52, Revenue and Expenditure statement*—

Total revenue directly connected with excisable articles for 1935–36 should be Rs. 9,971,973 and not Rs. 2,854,720.

on in about 250 small pot-stills of the most primitive variety ; it is now concentrated in eight large modern distillers situated in the Kalutara District ; the outturn capacity of each is not less than 60,000 gallons per annum. Three of the distillers have installed " Barbet's " patent stills for continuous distillation, each capable of producing 1,000 gallons of arrack per day. All distillery operations are carried on under the close supervision of the Excise Department. The arrack made at these distilleries is far purer and more free from copper than any arrack previously distilled from coconut toddy in Ceylon. These new private distilleries were started in April, 1924. They supply arrack to Government at a fixed price under what is known as the " Contract Supply " system.

About 8 gallons of toddy are required to produce a gallon of arrack at proof strength, *i.e.*, the outturn in arrack (proof gallons) of a distillery is about 12·0 per cent. of the toddy distilled. The distiller's cost of production is about Re. 1·25 to Re. 1·50 per proof gallon. The distillers sell their arrack to Government at Re. 1·80 per gallon at 27 degrees under proof. Government stores and matures the spirit in bond and carries on reducing, blending, and bottling operations.

Retailing is done by renters, who are usually those who offer the highest price for this privilege. In addition to paying this price irrespective of the volume of their sales, they pay the following charges for every gallon of arrack they obtain from a Government warehouse to cover Government expenditure on purchasing, warehousing, and bottling arrack :—

Duty on bulk arrack at Rs. 8·50 per gallon and on bottles Rs. 7·50 per gallon ;

Cost price Rs. 3 per gallon in all districts except Trincomalee, Batticaloa, Badulla, Jaffna, and Vavuniya ;

Cost price Rs. 3·50 per gallon of bulk arrack at Trincomalee, Batticaloa, Badulla, Jaffna, and Vavuniya ;

Extra charges per gallon on the ordinary quality of bottled arrack Re. 1. Extra additional charge of Rs. 2 per gallon on the special quality of bottled arrack and Rs. 3·50 on the Extra Special quality of bottled arrack.

The number of gallons of arrack distilled during the last three years is as follows :—

	Gallons (proof).		Gallons (proof).
1934	219,000	1936 ..	511,000
1935	438,000		

The corresponding percentage of outturn for the three years was 11·11, 12·0, and 11·89 respectively.

The consumption of arrack rose from 356,348 gallons in 1935 to 366,852 gallons in 1936, an increase of about 2·9 per cent.

The number of arrack taverns in 1934–35 was 132 and in 1935–36 138. The estimated net revenue, after deducting expenses of the distribution and storage system, was Rs. 4,169,387 in 1934–35 and Rs. 4,005,853 in 1935–36 which is equivalent to Re. 0·79 and Re. 0·75 respectively per head of population. The arrack consumption per head of population was ·07 gallons in 1934–35 as well as in 1935–36. The arrack revenue (net) per gallon was Rs. 11·38 in 1934–35 and Rs. 11·10 in 1935–36.

Vinegar Manufacture.

Toddy vinegar is obtained from the aceticization of fermented toddy, which takes place naturally after about 36 hours.

In 1924 special licences were first issued to vinegar manufacturers in the Western and Southern Provinces, with a view to encourage the manufactures of toddy vinegar as a local industry. Rules were passed in 1926 to control vinegar stores. Fourteen such licences were in force during 1936.

Revenue and Expenditure.

The total liquor revenue for the financial years 1934–35 and 1935–36 was as follows :—

	1934–35. Rs.	1935–36. Rs.
Excise Revenue.		
Arrack (gross)	4,650,283	4,483,061
Toddy	2,553,042	2,526,905
Licensing fees	154,925	97,663
Composition fees	9,857	9,614
Total Excise Revenue	7,368,107	7,117,243
Other Revenue.		
Customs (import duties)	2,558,177	2,704,742
Police Court fines in Excise cases	125,546	149,959
Sale of confiscated articles	685	29
Total revenue directly connected with excisable articles	10,052,515	2,854,720

The expenditure on the Excise Department, including the salaries of Civil Servants and all Excise Department officers and all other charges, was Rs. 1,385,207 in 1935–36 being 19·5 per cent. of the Excise revenue for the year, or 13·9 per cent. of the Excise revenue plus Customs duty on excisable articles and Police Court fines in Excise cases.

Excise Offences.

The following is a statement of Excise detections in the five years 1932, 1933, 1934, 1935, and 1936 :—

Year.	Foreign Liquor.	Arrack	Toddy.	Intoxicating Drugs.	Short Measure.	Others.	Total.
1932	7	193	5,269	726	—	1,596	7,791
1933	3	385	7,008	737	—	2,661	10,794
1934	10	260	6,471	736	—	564	8,041
1935	2	295	5,565	818	9	1,062	7,751
1936	2	348	7,235	796	—	757	9,138

The most remarkable increases occur under illicit distillation, illicit tapping, sale and transport of toddy, and under sale and possession of intoxicating drugs.

FISHERIES.

The fishing industries of the Island fall under the following main heads :—(*a*) sea fisheries, (*b*) chank fisheries, (*c*) pearl fisheries, and (*d*) fresh-water fisheries.

Sea Fisheries.—These are by far the most important and extensive and are carried on all round the coast by Sinhalese and Tamil fishermen who use native craft principally the catamaran and outrigger canoe working lines and modified nets. Both types of vessel depend on sail and on account of their limitation in size have long since attained their maximum development and efficiency. They cannot be adapted to work modern fishing gear.

Prior to the extension of the railway and of motor transport, the bulk of the fish caught was either dried, cured, or pickled, but with the present facilities for transport and with the aid of ice-making plants erected at the principal fishing centres, fish is now distributed in a more or less fresh condition to practically all parts of the Island and such is the demand that only a small surplus is available for the fish curers with the result that the once prosperous dried fish industry has almost died out.

No complete statistics exist regarding the value and extent of the industry, but its inability to meet existing demands is clearly shown by the records of the imports of fish goods into the Island, which in 1911 amounted to 544,222 cwt. valued at Rs. 4,951,516 and in 1936 to 668,398 cwt. valued at Rs. 14,322,209. The bulk of these imports is made up of cured and Maldive fish imported from Southern India and the Maldive Islands. These in 1911 amounted to 347,868 cwt. valued at Rs. 4,233,363 and in 1936 to 461,492 cwt. valued at Rs. 13,328,870.

The high value of these imports is clear evidence of the existence of a large local market for fish goods and, in conjunction with the vast natural resources that Ceylon waters offer for exploitation, indicates the scope for development open to this industry.

The question of this development has taken the foremost place in the investigation work of the Fisheries Department under the direction of the Marine Biologist who is also Director of the Colombo Museum. In the first instance this department carried out a fisheries survey of the coastal waters with the object of acquiring data regarding demersal fishes and of exploring these waters for possible trawl fishing grounds. Two extensive fishing banks, which are practically virgin ground, were surveyed, *i.e.*, the Pedro bank off the north-east coast with an area of over 1,000 square miles and the Wadge bank off Cape Comorin, Southern India, with an area of over 4,000 square miles. Both banks gave considerable promise for commercial development and following this preliminary work, the results of which are published in the Ceylon Journal of Science, Section C (Fisheries), Vol. II., it was decided to carry out a detailed survey of both banks for the purpose of obtaining more exact data of their trawl fishing value and also for the preparation of charts necessary for their commercial exploitation. A survey of the Pedro bank has been completed. Accounts of this work are contained in Ceylon Administration Reports (Marine Biology), 1926–30. The complete survey of the Wadge bank has been suspended indefinitely. Steps are now being taken for the establishment of a resarch station in Colombo for the investigation of problems connected with the local fishing industries. A grant of Rs. 87,500 has been received from the Colonial Development Fund for this purpose and plans are now under consideration.

Chank Fisheries.—The chank, which has considerable value in India, where it is cut and carved into bangles, is fished annually in the shallow waters of the Palk Strait off the Jaffna Peninsula where it occurs in great abundance. The fisheries are carried out chiefly by divers from Southern India and are subject to the Chanks Ordinance of 1890. The chanks fished are exported to India, the Ceylon Government collecting a small royalty in the form of an export duty, which prior to April, 1929, varied from Rs. 2 to Rs. 6 per 1,000 shells and now varies from Rs. 5 to Rs. 25 per 1,000 shells according to quality. The average number exported annually for the last ten years under the old duty was 2,305,664

valued at Rs. 119,555 and the average royalty was Rs. 10,770. Under the new duty the number exported in 1930 was 2,193,967 valued at Rs. 120,565 on which a royalty of Rs. 28,667 was collected. In 1933, doubtless owing to the trade depression, the number exported fell to 1,128,564 and the duty collected to Rs. 11,517. In 1936 the number exported was 1,908,325 and the royalty collected Rs. 13,308.

Chanks also occur in some numbers in the inshore waters of the Pearl banks but until 1930 fishing was prohibited in this area under the Chanks Ordinance, No. 18 of 1890. This Ordinance has now been amended and a rule passed making it lawful to fish chanks between January 31 and April 30 of each year, between Mannar and Moderagam point and within the three-fathom line.

Pearl Fisheries.—The Ceylon pearl oyster *Margaritifera vulgaris*, the fisheries of which have been famous for many centuries, occurs periodically in great abundance in the shallow-water area known as the Ceylon Pearl Banks lying off the west coast of Ceylon and extending from Puttalam to Adam's Bridge. The banks are under Government control and fisheries, which are a Government monopoly, are carried on at irregular intervals as oysters are available. The last fishery was in 1925 when over 15,000,000 oysters were fished and the gross receipts totalled Rs. 517,507. There are no prospects of immediate fisheries. Recently a large area of potential oyster-bearing ground about 30 square miles in extent was discovered.

Another form of pearl oyster, the so-called window-pane oyster *Placuna placenta*, which yields pearls of an inferior character, commonly occurs embedded in the soft muddy bottom of Lake Tamblegam, Trincomalee. When oysters are present the fishing rights are leased by Government. The fishery has been leased for a period of three years ending 1936. Small fisheries were held in 1934, 1935, and 1936. The market for these pearls is Bombay.

Fresh-water Fisheries.—These are carried on by villagers in the tanks, rivers, lagoons, and estuaries. In most cases a fishing licence is issued by a local authority (a Village Committee or Urban District Council). No particulars are available as to revenue collected from this source or as to the extent of the industry. The Fisheries Department is making a survey of the fresh-water fishes of the Island and has collected considerable data relating to the bionomics of these fishes. (See Ceylon Journal of Science, Section B, Volumes XV.—XVIII.)

Severe droughts of recent years have taken a heavy toll of fresh-water fishes, so much so, that in some fresh-water areas, particularly those of the dry zone, there is serious danger of complete extermination. In order to restock these waters, steps are now being taken to establish fish culture ponds in which the more important food fishes can be bred and reared.

SALT.

The manufacture, collection, and sale of salt constitute in Ceylon a Government monopoly, which is protected by an import duty. The monopoly is administered by the Executive Committee for Local Administration through the Salt Adviser and the Revenue Officers.

Ceylon consumes about 660,000 cwt. of common salt per annum. The greater part of this salt is manufactured or collected locally, and any shortages due to failure of harvest are made good by the importation of salt of similar quality from India or elsewhere. Salt is manufactured

BUS STAND.

from sea water by solar evaporation at the Government Salterns at Elephant Pass, in the Northern Province, and at Palavi, near Puttalam, in the North-Western Province, also in the privately owned salt pans at Chiviyateru in the Northern Province, about four miles from Jaffna, at Puttalam and at Nilaveli, eight miles north of Trincomalee. Spontaneously formed salt resulting from the natural evaporation of brine is collected from lagoons in the Hambantota District of the Southern Province and in the Jaffna Peninsula in the Northern Province. These are Crown property. The quantity of salt manufactured at Chiviyateru is small, and the greater part of the Island's supply is derived from the Government Salterns, from the lagoons in the Hambantota District, and from the private salt pans at Puttalam. The following statement shows the total quantity of salt produced in Ceylon during the year and the average of eight years 1929–1936 :—

Producing Centre.	Average for 1929–36. Cwt.	1936. Cwt.
Elephant Pass	158,548 ..	147,954
Palavi	70,893 ..	106,31[illegible]
Hambantota District	155,886 ..	147,120
Puttalam District (excluding Palavi) ..	122,865 ..	290,000
Jaffna and Mannar Districts (excluding Elephant Pass)	65,307 ..	62,569
Trincomalee District	47,599 ..	39,952
Total ..	621,098	793,913

Stocks at the beginning of 1936 amounted to 1,440,094 cwt. and at the end of the year to 1,665,652 cwt.

The amount realized during the financial year by sale of local salt from the Government depôts was Rs. 2,244,808 and the net revenue Rs. 1,710,692.

Owing to the nearly stationary consumption and the equalizing effect of the import duty the revenue from salt does not show a large percentage of variation from year to year.

PLUMBAGO.

Occurrence.—Plumbago, or graphite, is the most important of the Ceylon minerals. It occurs in minute scattered crystals in some of the granulities and crystalline limestones, but it is only where it is found in veins that it is of any commercial importance. The veins or pockets vary from the smallest size up to a yard or more in width, and often consist of pure graphite unmixed with other minerals. Frequently quartz, mica, felspar, pyroxene, apatite, pyrite, &c., are associated with the graphite. The most frequent country rock is a pyroxene granulite of the charnockite series.

Mines.—The deepest mines go to a depth of between 600 and 800 feet, while considerable quantities of the mineral are obtained very near the surface. Several of the largest mines are fitted with electric light and equipped with modern machinery but in most of them the arrangements are very primitive. Eighty-one mines were reported to be working at the end of 1936 employing about 2,166 men.

Prices and Grades.—Since 1919 prices have been nominal, there being practically no buyers. The majority of the mines were closed in 1920 and still remain closed.

The decrease in naval armaments had a direct effect on the demand for plumbago, especially with regard to Ceylon, as Ceylon flake was regarded as the best crucible plumbago used for this purpose. This is held to be the cause of the falling off in demand for these high grades and the demand throughout the year has been principally for carbon plumbago. With the present ruling prices there seems to be no prospect of any extension of mining activities, especially in view of the big surface deposits in Madagascar, which can now compete with most Ceylon grades for factory work. Owing to the lower price of Madagascar plumbago manufacturers are reported to have adapted their plant to deal with that plumbago.

The average market prices for all grades for the last seven years were as follows :—1930, Rs. 203·50 per ton; 1931, Rs. 182·34 per ton ; 1932, Rs. 168·73 per ton ; 1933, Rs. 126·95 per ton ; 1934, Rs. 143·02 per ton ; 1935, Rs. 148·15 per ton ; 1936, Rs. 112·40 per ton.

Local Trade.—The mining for, and the local trade in, graphite remain chiefly in the hands of Sinhalese. Large mines are worked both by Ceylonese capitalists and by tea-estate owners on whose land plumbago is found. Some of the larger mines can turn out 100 tons a month, and Ceylon can, when required, produce 30,000 tons a year.

During the years 1915, 1916, and 1917, over 15,000 skilled labourers were engaged in this industry.

Uses.—Plumbago is chiefly used in the manufacture of crucibles, furnace-facings, electrodes, and stove polish, for making lubricants, black paint and lead pencils, and in electroplating. During the war large quantities were required for the manufacture of munitions, and the exports in 1916 rose above the old maximum. The principal buyer in 1936 was United States of America, Japan, United Kingdom, and Germany next in the order.

The exports of plumbago in 1936 amounted to 269,895 cwt. valued at Rs. 1,516,968.

OTHER ECONOMIC MINERALS.

Precious Stones.—Precious stones in large variety are found principally in the alluvial gravels of the Ratnapura District and the south-west portion of the Island. The most important are sapphire and ruby (varieties of corundum), chrysoberyl (including cat's eye and the rare alexandrite), beryl or aquamarine, and the semi-precious stones, topaz, spinel, garnet, zircon, quartz of various colours (cairngorm, citrine quartz, amethyst) and moonstone.

Mining for gems is carried on almost entirely by Sinhalese on a co-partnership system. The stones are bought up by dealers to be cut and polished. Many of the best stones are exported to Europe and America, but the inferior varieties are largely sold locally or in India. It is difficult to estimate the value of the annual output, but it may be put at somewhere about Rs. 2,000,000.

With the exception of moonstone, which is mined from a band of acid leptynite and some garnet, the gem-stones are all obtained from alluvial gravels. Sapphire and beryl have been discovered in abundance in pegmatite veins in the Matara and Kandy Districts, respectively, and the other minerals named are probably derived from rocks of similar type.

Thorium-bearing Minerals.—A number of minerals containing thorium and uranium have been found in Ceylon, in pegmatite veins and also in alluvial gravels, and as constituents of natural concentrates on the seabeach. These were mined on a small scale at one time, but the deposits appear to be exhausted and production has ceased. Monazite sands were worked under Government control near Bentota on the west coast, but work was abandoned in 1927 as unprofitable owing to the heavy fall in the price of the mineral.

Ilmenite and Zircon Sands.—Large deposits of natural beach concentrates, consisting of about 75 per cent. ilmenite and 25 per cent. zircon rutile, &c., are known to exist at Pulmoddai and Tirrukovil, on the east coast of the Island. The former deposit has been proved to contain over two million tons of the mineral. Smaller deposits are found at other places on the coast. The mineral is used as a source of titanium for the preparation of titanium pigments, an industry of growing importance. The Ceylon deposits have not yet been exploited.

Mica.—A small amount of mica has been produced from pegmatite veins or from the contact rocks bordering limestones. The deposits are very irregular, the commercial mica occurring in patches in the veins, with much barren ground between them. There was a revival of interest in the mineral in 1931 and a few tons were exported. The variety exported was phlogopite (magnesia mica) or amber mica. Mining has however now ceased.

Other Mineral Products.—Other mineral products are the following :—

(1) Kaolin of good quality can be prepared from the decomposed felspar of granite rocks free from iron minerals.

(2) White quartz sand suitable for the manufacture of the commoner kinds of glass occurs in places on the west coast and in the north near Point Pedro.

(3) Limestone of a high degree of purity suitable for use in the manufacture of cement is found in large quantities in the Jaffna Peninsula. The coral deposits of the coast are extensively burnt for lime. The crystalline limestones of the interior of the Island are almost all dolomitic and yield inferior lime.

(4) The gneisses and granulites of the charnockite series furnish useful building stones.

(5) Pottery clays of poor quality and brick-earth suitable for the manufacture of bricks and tiles are found in all the river valleys. Kabuk, which is the product of decomposition of the surface of the crystalline rocks, is extensively used for small buildings. When first opened up, it can be cut into slabs, which harden on exposure to the air.

CHAPTER VII.

Commerce.

COMMERCE is one of the pillars of national welfare and its character is fundamentally determined by the type of economic activity obtaining in a country. Ceylon is predominantly agricultural and her economic products, with the exception of tea, are raw materials, which are exchanged in the world's markets for the manufactured goods and

4——J. N. 65863 (6/37)

articles of food needed by its population. The prosperity of Ceylon depends on income derived from tea, rubber, and the products of the coconut palm which constitute her staple agricultural industries. There are a few other products of a minor character, such as cacao, cinnamon, citronella, cardamoms, arecanuts, papain, kapok, &c., but they have never attained in recent times more than a fraction of the importance of the staple industries. Cultivation of paddy and other foodstuffs provides employment to a section of the indigenous population but the output of locally grown food is insufficient to satisfy home consumption and has to be supplemented by an increasing volume of imports.

The foregoing account clearly shows that the economic life of Ceylon is not sufficiently diversified and the inelastic nature of the economic structure of the country was forcibly revealed with the onset of the depression. The abnormal fall in export values during the period of the world economic depression was naturally accompanied by a corresponding shrinkage of incomes which brought severe hardship on the cultivator, both capitalist and peasant, as well as on the urban wage-earner. The recovery noticed towards the close of 1934 was maintained during 1935, and there was further expansion in 1936 in all branches of the economic activity of the country.

The obstacles to foreign trade, however, continued to operate. The adoption of economic nationalism by world powers as a general and permanent instrument of national commercial policy was bound to react on the course of international trade. A corollary to economic nationalism is the aggregation of economically interdependent units into economic unions within which there is an unimpeded flow of trade. The formation of such unions has been attempted by various groups of nations. The Ottawa Agreements by inaugurating the policy of Imperial Preference have tended to weld the various Empire units into economic groups. The introduction of a heralded scheme of preference between France and her Colonial Empire is another example of the new policy in international trade.

To primary producing countries like Ceylon, economic nationalism involves a drastic alteration of the economic structure. Foreign markets for raw materials tend to contract in the face of growing tariffs so that expansion of export industries must perforce be restricted. Hence arises the need for Trade Representation abroad, the conduct of propaganda in foreign countries and the collection and dissemination of up-to-date market intelligence so that existing markets may in some measure be preserved for the products of this country.

It is not in external markets alone that the effects of the policy of economic nationalism are felt. They are reflected also in the home market, where a policy of economic self-sufficiency is beginning to find expression. Every country of any importance now devotes increasing attention to the intensive cultivation of the home market. In Ceylon, this phase of economic nationalism is expressed in the "back to the land" cry, and in the imperative demand for industrialization. The fulfilment of these aims must necessarily modify the character of Ceylon trade. Protection, State Aid, and direct subsidy are indispensable supports of this policy and their operation profoundly influences the nature of external commerce. The year under review has already seen the effects of these forces.

In the paragraphs that follow, an account will be given of the main features of the commerce of Ceylon. No attempt will, however, be made to analyse the working of the factors described above, as it is yet too early to ascertain their influence with exact precision.

Introduction.—Once again it has not been possible to record any very sensational signs of a complete return to prosperity, but there were certain features in the trade results of 1936 which appear to hold out a promise that real improvements will be soon experienced. The visible balance of trade was 54 million rupees in favour of Ceylon as against 25½ millions in 1935, the total value of visible exports being 268½ millions as compared with 253 millions in 1935. It is true that there was an off fall of 13 millions in imports, but no less than 11 millions of this sum were due to reduction in recorded cost of grain and flour, chiefly rice, while smaller importations and lower value of liquid fuel, kerosine and petrol, the importation of which in bulk causes considerable irregularity in the records, were responsible for another decrease of over 4 millions. Apart from these items the only serious off-fall was in the "vehicles" class, imports of motor cars and lorries being considerably reduced. It is surmised that this reduction was mainly due to the abnormally large importations occasioned in 1935 by the rush of purchasers to replace their out of date vehicles at the first sign of returning prosperity. Otherwise there was, generally speaking, a satisfactory all round increase in imports.

From information received there is good reason to think that the retail trade of the Island has improved considerably in the last few months of 1936, particularly that of the small retailer. This is undoubtedly a healthy sign, since it points to an improved circulation of money among the less wealthy section of the population and it would not be unreasonable to infer that the improvement in purchasing power among this section of the community, must in turn have satisfactory effects upon the wholesale import trade.

The most satisfactory feature of the year's trade has been the improvement in prices of the main agricultural products of Ceylon. An analysis of the domestic exports shows that the most important items in order of importance were tea 57½ per cent., rubber 16½ per cent., coconut oil 4 per cent., copra 4 per cent., and desiccated coconut 2·8 per cent. In the case of each of these commodities the F.O.B. price has risen, in the case of tea slightly and in the case of rubber and the major coconut products considerably. Most of the minor products have also risen in value, exceptions being plumbago and the fibre products. These are dealt with in detail elsewhere. In view of this general improvement it is difficult to avoid the expectation that the normal lag of import trade behind export will not long persist, though such optimistic prognostications must of course be dependent for fulfilment on the absence of further dislocation of world trade by accentuation of the present tension in European international affairs. Apart from this menace the general outlook at the end of 1936 appeared distinctly bright and a note of optimism prevailed among the numerous oversea commercial visitors to the Customs offices which was in distinct contrast to their outlook twelve months ago.

Shipping.—The number of vessels entering the various ports of Ceylon in 1936 was 3,865, as compared with 3,959 in 1935, a drop of 2 per cent. with a corresponding drop in tonnage. Of these, 2,609 were steamers or

motor vessels, as against 2,660 in 1935. The off-fall was more pronounced in the outports than in Colombo, where the drop in tonnage of steamers and motor vessels was only 1 per cent., and is accounted for by the cessation of imports of considerable quantities of grain at certain outports. The number of vessels calling to coal and oil at Colombo was about the same as last year, viz., 214, against 218. The position in respect of shipping may therefore be regarded as practically stationary.

The following statement shows the position of the three major industries :—

	Exports.			
	Quantity. (000's.)		Value. (000's.)	
	1935.	1936.	1935.	1936.
	lb.	lb.	Rs.	Rs.
Tea	212,163	218,149	145,763	153,392
Rubber	120,478	111,823	38,393	46,840
	Cwt.	Cwt.		
Coconut produce ..	4,189	3,677	36,045	33,558

The following table shows the annual value of imports and exports and of coal and liquid fuel supplied to ships for bunkers during the last ten years (excluding the value of specie) :—

Year.	Imports.	Exports.*	Total.	Value of Coal supplied to Steamers.	Value of Liquid Fuel supplied to Steamers.	Grand Total Value of Ceylon's Trade.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1927	406,663,799	450,134,737	856,798,536	13,809,874	11,605,425	882,213,835
1928	400,493,185	395,115,662	795,608,847	11,042,548	11,460,888	818,112,283
1929	403,490,023	397,401,059	800,891,082	13,145,679	12,033,910	826,070,671
1930	302,442,620	304,262,618	606,705,238	9,307,448	9,467,050	625,479,736
1931	218,702,681	215,344,569	434,047,250	8,616,904	9,209,700	451,873,854
1932	196,202,961	173,208,745	369,411,706	5,524,929	10,245,673	385,182,308
1933	177,296,912	184,497,995	361,794,907	5,353,385	10,342,481	377,490,773
1934	217,088,892	246,607,086	463,695,978	5,999,625	11,203,134	480,898,737
1935	227,501,462	236,363,222	463,864,684	5,093,933	11,655,660	480,614,277
1936	214,337,529	253,060,686	467,398,215	4,720,348	10,693,953	482,812,516

Value of specie imported and exported during the last ten years is given below :—

Year.	Imported.	Exported.	Year.	Imported.	Exported.
	Rs.	Rs.		Rs.	Rs.
1927	14,464,177	1,538,104	1932	164,604	75,823
1928	11,626,454	3,997,500	1933	51,000	54,725
1929	25,805,300	16,653,733	1934	—	77,900
1930	21,913,408	10,211,582	1935	33,571	28,400
1931	9,493,496	14,454,433	1936	96,940	117,150

These statements which have appeared in the Customs Administration Reports for many years are merely reproduced for purposes of comparison. The form is somewhat misleading as bullion, but not specie, is included

* Includes parcel postal articles and ships' stores other than coal and liquid fuel supplied to steamers but does not include value of Ceylon gems exported by registered post, of which figures are not obtainable. The value of these exports is estimated to be not less than one million rupees.

DIAGRAM No. 7.

VALUES OF TOTAL TRADE, TOTAL EXPORTS AND TOTAL IMPORTS, CEYLON, SINCE 1922

Reproduced and Printed by Survey Dept. Ceylon 23. 3. 37.

under " imports " in the first table, while to ascertain the correct trade balance the value of bunkers supplied to steamers must be added to the export total since all coal and oil imported is included under imports.

Balance of Trade.—The following statement exhibits in summarized form the visible balance of trade in each of the last five years :—

Merchandise—	1932.	1933.	1934.	1935.	1936.
Total imports ..	196,049,000..	177,147,000..	216,996,000..	227,501,000..	214,338,000
Exports ..	167,465,000..	180,111,000..	241,193,000..	230,041,000..	244,415,000
Re-exports ..	21,372,000..	20,082,000..	22,617,000..	23,072,000..	24,060,000
Excess of exports over imports (+) and imports over exports(—)	— 7,212,000..	+ 23,046,000..	+ 46,814,000..	+ 25,612,000..	+ 54,137,000
Bullion and specie—					
Nett imports ..	101,000..	146,000..	15,000..	5,000..	—
Nett exports ..	— ..	— ..	— ..	— ..	20,000
Total excess of exports over imports (+) and imports over exports (—) of merchandise, bullion, and specie ..	— 7,313,000..	+ 22,900,000..	+ 46,799,000..	+ 25,607,000..	+ 54,157,000

The following statement indicates the nett visible balance of trade in each of the last twelve years :—

Year.	Excess of Exports over Imports (+). Excess of Imports over Exports (—). Rs.	Year.	Excess of Exports over Imports (+). Excess of Imports over Exports (—). Rs.
1925	.. + 161,985,000	1931	.. + 19,429,000
1926	.. + 124,805,000	1932	.. — 7,313,000
1927	.. + 59,832,000	1933	.. + 22,900,000
1928	.. + 9,497,000	1934	.. + 46,799,000
1929	.. + 9,939,000	1935	.. + 25,607,000
1930	.. + 8,892,000	1936	.. + 54,157,000

It will be noted that the balance of trade this year is the most favourable since 1927.

The following is a comparative statement showing in lakhs of rupees the values of the import and export trade of Ceylon including bullion and specie, with the United Kingdom, the Dominions, other Empire Countries, and the principal foreign countries buying Ceylon produce, together with the trade balances in respect of each country for the years 1935 and 1936 :—

	Imports. Lakhs of Rupees.		Exports. Lakhs of Rupees.		Excess of Exports over Imports (+). Excess of Imports over Exports (—). Lakhs of Rupees.

Total Excluding Ships' Stores	2,275	2,144	2,356	2,521	+ 81	+ 377
Ships' Stores	—	—	175	164	+ 175	+ 164
Grand Total	2,275	2,144	2,531	2,685	+ 256	+ 541

The value of the imports from the British Empire as a whole was Rs. 9,000,000 less and the value of exports to the British Empire Rs. 10,000,000 more than in 1935 ; the former reduction is attributable to readjustment of the import value of rice to true c.i.f. value and the latter increase to improved prices for tea and rubber.

As compared with 1935 imports from the United Kingdom fell by 1½ millions and exports increased by 1 million rupees. The excess of Ceylon's exports to the United Kingdom over the corresponding imports was 76 million, 3,000,000 greater than in 1935, but 9,000,000 less than in 1934. Trade with the United Kingdom is more fully dealt with later in this report.

Imports from other Empire countries fluctuated as follows :—British India increased by 2 millions, Burma fell off by 7 millions. Exports increased by 1 million to Australia, 3 millions to British India, and 2½ millions to Canada. These were the only important trade fluctuations, but there was a slight but steady tendency among almost all Empire countries to spend more on Ceylon products.

The following are the respective percentages of imports and exports bought from and shipped to the United Kingdom, other Empire countries, and foreign countries by Ceylon in 1935 and 1936 (inclusive of ships' stores) :—

	Imported by Ceylon.		Exported by Ceylon.	
	1935. Per Cent.	1936. Per Cent.	1935. Per Cent.	1936. Per Cent.
United Kingdom	20½	21	51	49
Other Empire countries	45½	44½	21½	22¾
Foreign countries	34½	34½	27½	28¼

The distribution by source of import between the British Empire and foreign countries remained practically unchanged, while the British Empire share in the purchase of Ceylon products decreased by a little

less than 1 per cent. This change is attributable to the relative increase in the value of rubber compared with the corresponding increase in the other main products, since a far larger proportion of this commodity than of any other is sold to foreign buyers.

Of all the foreign countries trading with Ceylon, Japan regained the top place as an importer. Imports from Iran and Siam fell off owing to a drop in value and quantity of crude petroleum from Iran and a drop in value, though not in quantity of rice from Siam. Belgium made some advance as a supplier, otherwise the source of supply of foreign goods was but little changed. Of Ceylon's foreign customers the United States of America with her large purchases of rubber at enhanced prices improved her leading position. The two countries which restrict imports, viz., Germany and Italy, bought much less, the fall in exports to the latter country being of course intensified by the "Sanctions" restriction, and the only other notable feature was the increase of exports to Iran.

The following statement gives a comparative analysis of the country of origin of certain selected imports for 1932 (the last complete pre-preference year), 1933, 1934, 1935, and 1936 :—

	United Kingdom.					British Possessions.				
	1932. Per Cent.	1933. Per Cent.	1934. Per Cent.	1935. Per Cent.	1936. Per Cent.	1932. Per Cent.	1933. Per Cent.	1934. Per Cent.	1935. Per Cent.	1936. Per Cent.

The changes in source of purchase of the selected articles above were not very marked. The United Kingdom made appreciable gains in respect of imports of motor cars (+ 7 per cent.) and toilet soap (+ 24 per cent.), the latter percentage gain having been obtained at the expense of foreign toilet soaps, especially Japanese. In 1935 soap duties thus appreciably benefited the United Kingdom while at the same time they reduced total imports by over 2,000 cwt. or 23 per cent. by volume. The United Kingdom import percentage of the following commodities was reduced :—Lubricating oil, gramophones, apparel, chemicals, wireless goods, and ham and bacon. Other changes were insignificant. Import percentages from the British Empire as a whole more or less conformed to the movements of the United Kingdom imports, Canada making a large gain in toilet soaps at the expense of the United States of America. The trend of foreign import percentages was of course in inverse rates to those of the Empire, and needs no separate comment.

The following are the comparative percentages for the last five years of the value of imports from, exports to, and total trade with the United Kingdom, British Possessions, and foreign countries. The figures are exclusive of coal, liquid fuel for bunkers, and other ships stores :—

	1932.* Per Cent.	1933. Per Cent.	1934. Per Cent.	1935. Per Cent.	1936. Per Cent.
Imports—					
From the United Kingdom	19·66	17·53	18·39	20·61	21·11
From British Possessions	47·59	46·81	42·69	45·27	44·57
From foreign countries	33·35	35·66	38·92	34·12	34·32
	100	100	100	100	100
Exports—					
To the United Kingdom	49·29	50·53	50·91	50·86	47·97
To British Possessions	23·02	19·84	16·82	21·59	23·14
To foreign countries	27·69	29·63	32·27	27·55	28·89
	100	100	100	100	100
Total trade—					
From and to United Kingdom	33·08	34·31	35·68	36·00	35·63
From and to British Possessions	36·23	33·12	28·96	33·23	32·98
From and to foreign countries	30·69	32·57	35·36	30·77	31·39
	100	100	100	100	100

The principal countries from which Ceylon imports are obtained with the percentage of the total supplied by each for the last four years are shown in the following table :—

	1933. Per Cent.	1934. Per Cent.	1935. Per Cent.	1936. Per Cent.
1. British India	21·27	20·15	19·48	21·49
2. United Kingdom	17·52	18·40	20·61	21·11
3. Burma	17·99	14·58	17·50	15·15
4. Japan	7·24	8·67	5·37	6·41
5. Siam	2·36	5·23	5·49	5·02
6. Iran	7·22	6·44	5·57	4·95
7. Sumatra	4·48	4·39	4·11	3·18
8. Java	3·16	2·85	2·72	2·73
9. Australia	2·56	2·37	2·31	2·44
10. United States of America	1·82	2·32	2·13	2·25
11. Germany	1·53	1·64	2·04	2·03
12. Maldive Islands	1·85	1·69	1·63	1·53
13. Borneo, excluding British	1·00	·01	0·48	0·55

British India has taken first place, Japan has risen from sixth to fourth, and Iran dropped from fourth to sixth place.

The value of imports and exports from and to Japan during the last fifteen years :—

Year.	Imports. Rs.	Exports. Rs.
1922	5,180,702	1,182,074
1923	5,447,478	1,183,060
1924	6,425,177	1,965,846
1925	7,141,718	1,363,091
1926	9,766,541	1,709,421

* Figures for 1932 exclude imported rubber.

Year.	Imports. Rs.	Exports. Rs.
1927	9,280,110	1,760,664
1928	9,856,383	1,639,160
1929	10,752,783	2,054,968
1930	9,246,910	1,499,823
1931	10,699,241	1,338,894
1932	13,231,206	1,200,475
1933	12,828,632	1,474,612
1934	18,816,688	1,499,071
1935	12,222,488	1,817,726
1936	13,741,473	1,866,635

Notes on Trade between Ceylon and certain selected Empire and Foreign Countries.

United Kingdom.—Imports Rs. 45 millions. Exports Rs. 120 millions. A decrease in total trade of one million.

The largest individual items, totalling over two millions each, are cotton piece goods bleached, printed and dyed and motor cars. There was an increase of 32 per cent. in imports of printed cotton piece goods; bleached and dyed remained almost stationary. Importations of motor cars fell by 20 per cent. and of lorries by 21 per cent. Importations of the less finished types of iron and steel were rather lower. Manure imports were considerably lower, sulphate of ammonia falling by 42 per cent. Coal fell by 14 per cent. Machinery imports were on the whole larger, notable increases being tea machinery (+52 per cent.) and prime movers (+37 per cent.). Electrical machinery however fell by 42 per cent. Cement imports increased by 17 per cent. Paints and colours increased by 7 per cent. ; lubricating oil fell by 12 per cent. Imports of heavy pneumatic tyres increased by 21 per cent. but car tyres decreased by 10 per cent. The absence of any serious malaria epidemic was marked by a reduction of 62 per cent. in imports of quinine and of 40 per cent. in milk foods, though per contra imports of preserved milk increased by 80 per cent. Laundry soap imports were steady, but toilet soap advanced by 45 per cent. There was not very much change in the food items. Paper imports were generally higher. Artificial silk made a noticeable advance of 60 per cent., and umbrellas, which received preference late in 1935. showed their appreciation by an increase of 47 per cent. Among other considerable increases in minor items were cotton thread (+23 per cent.), beer, ale and porter (+20 per cent.), and haberdashery and millinery. other (+ 28 per cent.), while there were decreases in sewing machines (—18 per cent.), cigarettes (—30 per cent.), chemicals (—14 per cent.), cotton piece goods, grey (—38 per cent.).

Exports : By far the most important item is of course tea, exports of which increased by 3 per cent. Desiccated coconut also increased (+24 per cent.) but rubber (—32 per cent.) and coconut oil (—10 per cent.) decreased. Fresh coconuts, fibre and yarn all decreased. The most spectacular feature of exports to the United Kingdom, however, was an increase of 210 per cent. in exports of cacao. Kapok (+57 per cent.) and cinnamon (+35 per cent.), both gained, but papain (—60 per cent.), plumbago (—15 per cent.), and citronella oil (—37 per cent.) fell off.

N.B.—Figures are inclusive of Bullion and Specie, Postal articles and Ships' Stores.

* Uncorrected as obtained from the United Kingdom Trade Returns of 1936.

† From the United Kingdom Trade Returns.

British India (excluding Burma).—Imports Rs. 46 millions. Exports Rs. 15 millions. Total trade Rs. 61½ million, the same as in 1935.

The most important import item is rice. The returns show a drop of 7½ per cent. due to more accurate valuation of imports. The next in importance are dry and salt fish (+34 per cent.), cotton piece goods dyed (+17 per cent.), coal (+8 per cent.), rubber (+12 per cent.) (this is of course re-exported), onions (no change), pulses (+26 per cent.), dried chillies (—20 per cent.), gingelly poonac (+10 per cent.). Other gains of note are mixed piece goods (+50 per cent.), fish manure (+61 per cent.), cotton piece goods bleached (+25 per cent.), beedies (+30 per cent.), coriander (+65 per cent.), while notable decreases were grain (—50 per cent.), sulphate of ammonia (—54 per cent.), cummin seed (—33 per cent.), and paddy (—75 per cent.), the last named decrease being due of course to improved harvest in the Eastern Province.

Exports to British India as a whole rose by 28 per cent. The largest gainers were copra (+63 per cent.), arecanuts (+41 per cent.), and unmanufactured tobacco (+35 per cent.). Coconut oil (—13 per cent.), fresh coconuts (—11 per cent.), and tea (—27 per cent.) decreased.

Australia.—Imports Rs. 5,247,263. Exports Rs. 11,147,026. Total trade Rs. 16,394,289 (+6 per cent.). Total imports were about the same. The following goods showed increases :—butter (+11 per cent.), wheat (+11 per cent.), mutton (+13 per cent.) There were very greatly increased imports of sleepers and scantlings. The following decreased :—wheat flour (—10 per cent.), milk foods (—21 per cent.), apples and grapes (—4 per cent.), beef (—11 per cent.), and preserved milk (—46 per cent.). (The milk importations in 1935 were abnormal.)

Total exports increased by 9 per cent. Tea exports were little changed but rubber and cacao exports increased by about 100 per cent. each. Mattress fibre fell by 17 per cent.

Burma.—Imports Rs. 32,480,827. Exports Rs. 303,229. Total trade Rs. 32,784,056. The staple import from Burma is of course rice, imports of which fell in value (though not in volume) by 20 per cent. The decrease is mainly due to adjustment of value in the 1936 returns to the true value. Paddy fell by 41 per cent., gram by 12 per cent. There were increases in pig lead (+60 per cent.), teak logs (+49 per cent.), chillies, dried (+76 per cent.), and candles (+78 per cent.).

The only export of note is coconut oil, which fell by 44 per cent.

Canada.—Imports Rs. 427,760. Exports Rs. 10,009,168. Total trade Rs. 10,436,928 (+24 per cent.).

Imports decreased by 47 per cent. The main decreases were in motor lorries (no imports), motor cars (—71 per cent.). Imports of Canadian toilet soap, however, appeared upon the market for the first time in any considerable quantity.

Exports increased by 31 per cent. mainly owing to increased export values of tea (+57 per cent.) and rubber (+71 per cent.). Cacao (+ 154 per cent.) also improved, but exports of coconut oil decreased by 40 per cent.

New Zealand, Union of South Africa.—There were no marked changes.

Belgium.—Imports Rs. 2,923,878. Exports Rs. 2,598,973. Total trade Rs. 5,522,851 (+12 per cent.).

There were increases of imports of sulphate of ammonia (+214 per cent.), diamonds (+ 41 per cent.), iron and steel corrugated sheets (+210 per cent.), and coated plates and sheets (+83 per cent.). Plain plates and sheets decreased by 42 per cent. It looks as though the main increase (sulphate of ammonia) had been obtained at the expense of the United Kingdom. The increases in exports to Belgium include coconut poonac (+5 per cent.), bristle fibre (+10 per cent.), desiccated coconut (+8 per cent.), and tea (+51 per cent.). Rubber (—42 per cent.) and coconut oil (—50 per cent.) showed marked decreases.

France.—Imports Rs. 1,347,406. Exports Rs. 4,354,746. Total trade Rs. 5,702,152 (+ 10 per cent.).

Imports of the following goods increased :—muriate of potash (+34 per cent.), steel girders (+165 per cent). Imports of brandy (—19 per cent.), patent medicines (—20 per cent.), and coriander (—76 per cent.), all decreased. Exports as a whole increased by 22 per cent. The main increases were in rubber (+31 per cent.), tea (+26 per cent.), desiccated coconut (+51 per cent.), and bristle fibre (+81 per cent.). Coconut shell charcoal fell by 49 per cent.

Germany.—Imports Rs. 4,353,830. Exports Rs. 4,648,262. Total trade Rs. 9,002,092 (—15 per cent.).

Germany's efforts to balance artificially her import and export trade resulted in a decrease of 6 per cent. on imports and 23 per cent. on exports as compared with 1935.

Imports : Imports from Germany are spread over a large field and changes are less sensational than in the case of other countries. Some of the more important increases were glassware (+28 per cent.), manufactures of iron and steel, n.e.s. (+21 per cent.), uncoated plates and sheets (+ 20 per cent.), motor cars (+ 10 per cent.). Losses were registered in patent medicines (—22 per cent.), cement (—9 per cent.), lorries (—44 per cent.), coal (—53 per cent.), and cutlery (—8 per cent.).

Exports: The only noteworthy increase in exports was in tea (+83 per cent.). Decreases were recorded in rubber (—5 per cent.), desiccated coconut (—65 per cent.), coconut oil (—27 per cent.), coir yarn (—37 per cent.), and plumbago (—6 per cent.).

Holland.—Imports Rs. 999,486. Exports Rs. 1,185,936. Total trade Rs. 2,185,422 (—22 per cent.).

Imports generally decreased by 8½ per cent. The more important individual decreases were in vegetable ghee (—22 per cent.) and cotton piece goods, dyed (—84 per cent.). There were increases under milk preserved (+7 per cent.) and cheese (+5 per cent.). Exports fell by 31 per cent., the more important decreases being under rubber (—51 per cent.) and coconut oil (—64 per cent.). Desiccated coconut increased by 12 per cent.

Iran.—Imports Rs. 10,612,977. Exports Rs. 1,455,402. Total trade Rs. 12,068,379 (—8 per cent.).

Imports: The main import is crude oil which decreased by 17 per cent. The main export is tea, which increased by 300 per cent.

Iraq.—Imports Rs. 22,708. Exports Rs. 801,982. Total trade Rs. 824,690 (—28 per cent.).

Imports are negligible. Exports of tea fell by 34 per cent., the decrease being alleged to be due to smuggling into Iraq of uncouponed tea. Coconut oil increased by 12 per cent.

Italy.—Imports Rs. 197,580. Exports Rs. 759,914. Total trade Rs. 957,494 (—76 per cent.).

Trade with Italy, as was recorded last year, had been on the down grade. The imposition of sanctions did much to accelerate the shrinkage, and trade did not recover even after the lifting of sanctions in July. Potatoes, the most important item of importation, come on the Ceylon market in the second-half of the year, and were not much affected as compared with 1935. Other imports were negligible. The export item most affected was rubber, a prohibited export during sanctions, which fell by 85 per cent. Other important decreases were coconut oil (—42 per cent.), desiccated coconut (—20 per cent.), and tea (—30 per cent.).

Japan.—Imports Rs. 13,741,473. Exports Rs. 1,734,698. Total trade Rs. 15,476,171 (+11 per cent.).

The record of the Japanese import trade for 1936 shows an improvement in every important class of imports with the exception of cement (—7 per cent.), cotton banians (—18 per cent.), and garments other (—62 per cent.). In her largest single item silk and satin, the increase was only 4 per cent., but in other textiles her advance was much more noticeable, owing to the fact that a great deal of the excess over the quota imported in 1934 which fell to be deducted in subsequent years, was written off in 1935. In the regulated classes of textiles the increases were as follows :—cotton bleached (+57 per cent.), dyed (+56 per cent.), printed (+87 per cent.), artificial silk (+44 per cent.). (These figures represent, of course, only values. The percentage of increase in yardage was much less.) Other large single items which showed appreciable increases were tea chests (+25 per cent.), potatoes (+47 per cent.), silk garments (+49 per cent.), cotton manufactures, other (+112 per cent.), and tinned fish. But certainly the most striking feature of Japanese imports was the uniformity of increase in values which led a total increase of 13 per cent.

Exports : There was a negligible decrease in total exports to Japan, who is not a good customer of Ceylon. The main changes were an increase of 38 per cent. in tea and a decline of 30 per cent. in plumbago.

Java.—Imports Rs. 5,866,506. Exports Rs. 43,060. Total trade Rs. 5,909,566 (—5 per cent.).

Imports of sugar increased by 1 per cent. Coffee imports fell by 37 per cent. Tamarind imports increased by 137 per cent.

Siam.—Imports Rs. 10,770,669. Exports Rs. 65,263. Total trade Rs. 10,835,932 (—14 per cent.). The main imports are rice (—14 per cent.) and teak (—21 per cent.). The small export trade which consists entirely of tea increased by 10 per cent.

Spain.—Imports Rs. 139,750. Exports Rs. 397,515.

Import trade is negligible. There was a drop of 68 per cent. in exports. The export of coconut poonac virtually ceased. Desiccated coconut fell by 47 per cent., cinnamon by 46 per cent., rubber by 66 per cent.

Sumatra.—Imports Rs. 6,823,095. Exports Rs. 23,133. Total trade Rs. 6,846,228 (—27 per cent.).

Imports of motor spirits (—20 per cent.) and kerosene oil (—39 per cent.) fell considerably, though the actual quantities entered for duty fell by a much smaller percentage.

United States of America.—Imports Rs. 4,830,093. Exports Rs. 37,680,689. Total trade Rs. 42,510,782 (+39 per cent.).

Statement of Quantities and Values of the Principal Articles imported for Home Consumption, the Duties collected thereon, and the Shares of the Chief Exporting Countries.

All other goods		—	—	1,951,169	2,011,322	—	—	—

Total import values were practically unchanged. The following were the main increases :—tobacco unmanufactured (+25 per cent.), lubricating oil (+12 per cent.), patent medicine (+23 per cent.), cinematograph films (+52 per cent.). The following decreases were recorded :—motor lorries (—12 per cent.), apples and grapes (—10 per cent.), motor cars (—60 per cent.).

Total export values increased by no less than 46 per cent. As might be expected, this increase was largely due to rubber (+69 per cent.). The quantitative increase was comparatively trivial and the rise is almost entirely due to recovery in rubber prices. Other noteworthy increases were tea (+9 per cent.), cinnamon leaf oil (+106 per cent.), papain (+20 per cent.), mattress fibre (+23 per cent.), and cinnamon (+10 per cent.). A decrease was recorded in plumbago (—28 per cent.).

The principal countries buying Ceylon produce and manufactures are shown in the following table with the percentage of value taken by each :—

	1934. Per Cent.	1935. Per Cent.	1936. Per Cent.
1. United Kingdom	51·41	51·68	49·02
2. United States of America	13·85	11·17	15·41
3. British India	3·79	5·22	6·31
4. Australia	3·71	4·43	4·15
5. Canada	2·77	3·31	4·09
6. Union of South Africa	2·35	3·31	3·32
7. New Zealand	2·09	2·82	2·84
8. Germany	2·54	2·61	1·9
9. France	2·02	1·55	1·78
10. Egypt	1·39	1·18	1·06
11. Belgium	1·46	1·31	1·06
12. Holland	1·81	·74	·48
13. Italy	2·31	1·55	·31

France has risen from the tenth place to ninth place and Egypt from thirteenth place to tenth place, while Italy has dropped from ninth place to thirteenth place.

The export duties recovered during the last five years were—

	1932. Rs.	1933. Rs.	1934. Rs.	1935. Rs.	1936. Rs.
Tea	5,980,236	4,786,824	4,856,033	4,594,712	4,363,272
Cacao	65,940	43,681	41,022	—	—

Duty withdrawn from October 6, 1934.

The duty on tea was reduced from Rs. 2·15 to Rs. 2 per 100 lb. as from October 1.

The true average values* of the principal products of Ceylon exported during 1934, 1935, and 1936 are shown in the following statement :—

		1934. Rs. c.	1935. Rs. c.	1936. Rs. c.
Tea	per lb.	0 66½†	0 70†	0 71½†
Tea	,,	0 65 9/10‡	0 65 6/7‡	0 67 9/10‡

* Obtained from published reports of market quotations.
† United Kingdom.
‡ Other countries.

In 1936 the tea prices rose to 77½ cents per lb. in February. A further increase of 3 per cent. was noticed in the average price for the year as compared with 1935 and the average in December was 73 cents, as against 67 cents in December, 1935. A striking improvement was seen in the prices of all the primary products of the Island with the exception of mattress fibre, coir yarn, plumbago, and citronella oil.

In March, 1936, the price of rubber topped 40 cents for the first time since 1929 and thereafter made a uniform progress reaching 49⅙ cents in December, 1936, as compared with 33¾ cents in December, 1935.

Notes on Principal Imports.

Rice.—The total quantity imported was nearly 2 per cent. less than in 1935. Burma remained the chief source of supply but the quantity imported thence showed a decrease of 365,681 cwt. as compared with the previous year. The imports from British India and Siam showed slight increase. The decrease in the total imports from this source was chiefly due to increased local production as compared with 1935, when a crop failure was experienced. Natural increase in demand prevented the deficit being any greater.

The following table shows the fluctuations of price during 1936 in respect of Indian, Rangoon, and Siam rice :—

	Indian Samba Rice per Bushel. c.i.f. Rs. c.	Rangoon Milchard Rice per Bushel. c.i.f. Rs. c.	Siam Broken Rice per Bushel. c.i.f. Rs. c.
January	3 55	2 85	2 70
February	3 45	2 45	2 10
March	3 55	2 55	2 15
April	3 85	2 65	2 25
May	3 68	2 75	2 25
June	3 85	2 70	2 30
July	3 75	2 75	2 25
August	3 75	2 75	2 35
September	3 70	2 75	2 25
October	3 70	2 70	2 45
November	3 75	2 70	2 40
December	3 75	2 75	2 35

The imports in 1935 and 1936 from the chief supplying countries are shown in the following table :—

	Quantity.		Value.	
	1935. Cwt.	1936. Cwt.	1935. Rs.	1936. Rs.
Burma	6,955,563	6,589,882	37,813,446	30,467,743
British India	1,368,409	1,467,320	11,130,839	10,389,536
Siam	2,178,240	2,230,695	11,820,607	10,173,437
Straits Settlements	78,501	41,674	430,023	184,898
Cochin China	81,317	88,554	442,872	399,164
India, non-British	2,963	606	15,863	2,992
Other countries	68	51	432	797
	10,665,061	10,418,782	61,654,082	51,618,567

Other Grain.—The chief imports under this head are again paddy, pulses, and gram. Eighty per cent. of the paddy came from Burma and 72 per cent. of the pulses and 55 per cent. of the gram came from British India. The imports of paddy decreased by 57 per cent. as compared with 1935, owing to a much more successful harvest in the Eastern Province and elsewhere.

Imports in 1934, 1935, and 1936 are shown below :—

	1934 Cwt.	1935 Cwt.	1936 Cwt.
Paddy ..	228,322	482,539	207,214
Pulse ..	406,575	407,386	516,313
Gram ..	117,619	176,866	112,537

The following table shows the quantity of rice and other grain imported during the period 1927–1936 :—

Year.	Rice. Cwt.	Other Grain. Cwt.	Year.	Rice. Cwt.	Other Grain. Cwt.
1927	9,087,264	1,013,840	1932	8,839,055	920,224
1928	9,244,691	1,310,637	1933	8,797,918	748,182
1929	9,380,556	1,242,349	1934	9,552,623	782,906
1930	9,259,873	950,443	1935	10,665,061	1,177,665
1931	8,732,548	876,810	1936	10,418,782	937,079

Wheat Products.—Australia supplied 93 per cent. of the wheat flour imported during 1936. The total quantity imported showed a decrease of 25 per cent. as compared with 1935.

The following table shows the imports during 1934, 1935, and 1936 :—

	Quantity. Cwt.	Value. Rs.
1934	339,988	2,267,120
1935	383,349	2,325,232
1936	287,998	2,139,017

Feeding Stuffs for Animals.—The chief imports under this head are gingelly poonac, and bran and pollard, the bulk of which came from British India. There was a slight decrease in the imports of bran and pollard, while the imports of gingelly poonac increased by over 54,000 cwt.

Spirits, Brandy, Whisky, and Gin.—The quantity of whisky cleared for home consumption showed an increase over 3 per cent. as compared with 1935, while there was a further drop in the quantity of Brandy cleared for home consumption during 1936. Gin, however, increased slightly.

The quantities cleared for home consumption during the last five years are shown in the following table :—

	Proof Gallons.				
	1932.	1933.	1934.	1935.	1936.
Brandy	29,209	29,419	36,069	31,274	28,292
Gin	25,978	21,253	23,512	19,507	20,649
Whisky	39,101	47,267	56,060	47,391	49,040

Sugar, including Candy, &c.—The imports increased over those of the previous year by 121 000 cwt. or 9 per cent. Java supplied 82 per cent. of the total imports. The c.i.f. price remained at less than 5 cents per pound. The steady increase in imports since the slump in 1932 is interesting.

The quantities imported in recent years are as follows :—

Year.	Quantity. Cwt.	Year.	Quantity. Cwt.
1922	524,674	1932	1,029,813
1925	794,267	1933	1,170,759
1928	1,193,588	1934	1,275,366
1929	1,250,058	1935	1,347,137
1930	1,430,396	1936	1,468,135
1931	1,424 [illegible]		

Tobacco, Cigars, and Cigarettes.—Increased importations were recorded under all kinds of tobacco and manufactures thereof, with the exception of cigarettes. The imports of beedies, unmanufactured tobacco, and manufactured tobacco have increased by 24 per cent., 20 per cent., and 11 per cent., respectively, as compared with 1935, while there has been a marked drop of 22 per cent. in cigarettes. The imported cigarettes are being replaced by the locally manufactured article. Japan was the only country that registered an increase of 1,904 lb. in the importation of cigarettes as compared with 1935. Ninety-six per cent. of the total imports came from the United Kingdom and beedies solely from British India, while 85 per cent. of the unmanufactured tobacco came from the United States of America.

The total quantity of tobacco entered for home consumption reached the highest figure recorded since 1927, there being an increase of nearly 192,000 lb. or 18 per cent. over 1935.

The quantities of the various classes of tobacco cleared for home consumption during the past ten years are as follows :—

Year.	Unmanufactured Tobacco. lb.	Cigars. lb.	Cigarettes. lb.	Manufactured Tobacco. lb.	Beedies. lb.	Total. lb.
1927	13,992	7,106	568,109	26,078	75,687	690,972
1928	115,901	6,817	556,314	13,952	76,895	769,879
1929	217,495	5,853	584,227	14,021	70,571	892,167
1930	555,321	4,276	316,749	12,326	57,653	946,325
1931	872,141	3,144	133,414	10,134	44,428	1,063,261
1932	673,422	2,717	86,201	6,364	20,254	788,958
1933	721,043	2,136	88,056	5,976	28,509	845,720
1934	1,011,009	2,627	55,404	6,017	50,473	1,125,530
1935	926,418	2,451	58,430	7,697	61,388	1,056,384
1936	1,115,787	2,601	44,649	8,545	76,227	1,247,809

Coal.—The imports of coal decreased from 436,948 tons in 1935 to 405,536 tons in 1936. Union of South Africa was the chief supplier sending about 54 per cent. of the total imports.

The following are the imports in 1936 from the chief supplying countries :—

	Tons.
Union of South Africa	218,595
British India	151,821
United Kingdom	28,412

Liquid Fuel.—The imports of liquid fuel showed a marked decrease of 7,310,000 gallons as compared with the previous year. It should however be remembered that the arrival of two or three tankers one side or other of New Year's day may appreciably affect the year's release, and the decrease should be discounted accordingly. Actually the imports in January, 1937, reached a record figure. Iran supplied 89 per cent. and Non-British Borneo 10 per cent. of the total imports. 59,522,000 gallons were shipped as bunkers, the quantity remaining for local consumption being 8,139,000 gallons, as compared with 10,218,000 gallons in 1935.

The total imports of liquid fuel during the last three years were—

Year.	Quantity. Gallons.	Value. Rs.
1934	69,585,939	12,528,743
1935	74,972,074	13,594,424
1936	67,661,622	11,606,717

Manure.—The imports of manure showed an increase of about 7 per cent. as compared with 1935.

The following table shows the total imports of manure during the last five years :—

Year.	Quantity. Cwt.	Value. Rs.
1932	1,508,451	6,120,067
1933	782,323	2,825,436
1934	1,629,364	5,823,294
1935	1,513,810	5,678,829
1936	1,627,880	5,939,931

The chief kinds of manure and the countries from which they were mainly imported in 1936 are shown in the following table :—

	Quantity. Cwt.	Value. Rs.	Country.
Sulphate of ammonia	503,004	2,334,239	Belgium
Groundnut poonac	150,096	445,732	British India
Bone meal	259,594	764,772	,,
Mineral rock phosphate	213,968	398,530	Egypt
Guano fish	47,922	199,613	Union of South Africa
Muriate of potash	102,026	473,531	Germany
Fish manure	122,572	351,329	British India
Castor seed poonac	32,531	76,725	,,
Blood meal	19,318	113,648	,,
Refuse of saltpetre	21,459	118,157	,,

Cement.—The total imports of cement increased by 120,377 cwt. as compared with the previous year, nearly 50 per cent. being supplied by Japan. The imports from the United Kingdom increased from 390,000 cwt. in 1935 to 484,000 cwt. in 1936. Germany has been the next important supplier. As a matter of interest the following table is inserted to show the rapid increase in the imports of Japanese cement :—

Year.	Cwt.	Year.	Cwt.
1929	20,000	1933	512,000
1930	60,000	1934	627,572
1931	247,000	1935	589,135
1932	339,000	1936	626,217

The following table shows the total imports of cement during the last five years :—

Year.	Quantity. Cwt.	Value. Rs.	Year.	Quantity. Cwt.	Value. Rs.
1932	780,828	1,168,003	1935	1,120,959	1,385,170
1933	922,012	1,152,198	1936	1,241,336	1,366,287
1934	1,073,801	1,307,374			

Metal and Metalware, Ferrous.—There is a slight increase of 44,802 cwt. or 6 per cent. in the total imports of ferrous metals as compared with 1935. The main heads of imports from the United Kingdom were as follows :—

Pig iron rose from 4,880 cwt. to 9,300 cwt. ; iron and steel girders, &c., dropped from 42,493 cwt. to 38,534 cwt. ; galvanized corrugated sheets

dropped from 47,574 cwt. to 31,092 cwt.; bars, rods, &c., rose from 18,781 cwt. to 27,138 cwt. Hoop iron rose from 17,477 cwt. to 19,669 cwt., and tubes and pipes rose from 53,566 cwt. to 62,975 cwt.

Imports of bars, rods, &c., from Belgium rose from 20,313 cwt. to 25,464 cwt.; of iron and steel girders, &c., dropped from 28,771 cwt. to 23,780 cwt.; and of plates and sheets for manufacture of oil drums decreased from 78,532 cwt. to 46,059 cwt. Luxemburg supplied 19,013 cwt. of bars and rods, &c., as compared with 41,384 cwt. in 1935 and the imports of plates and sheets for oil drums decreased from 2,962 cwt. to 805 cwt. 35,893 cwt. of iron and steel girders, &c., came from France, as compared with 13,760 cwt. in 1935. German supplies of bars, rods, &c., increased from 8,338 to 16,415 cwt.; of iron and steel girders, &c., from 11,407 cwt. to 16,144; and of plates and sheets for oil drums from 22,118 cwt. to 26,109 cwt. Japan sent 74 per cent. of the total imports of iron wire nails, as against 52 per cent. in 1935. Seventy-five per cent. of the total imports of enamelled holloware too came from Japan.

The following table shows the total imports of metal and metalware, ferrous, during the past five years :—

Year.	Quantity. Cwt.	Value. Rs.	Year.	Quantity. Cwt.	Value. Rs.
1932	552,384	4,815,790	1935	732,449	6,554,026
1933	525,613	4,638,438	1936	777,251	6,937,142
1934	796,623	6,948,251			

The percentage of the total value of ferrous metals and metalware supplied by the leading exporting countries during 1936 is shown below :—

United Kingdom	59·59	France	2·83
Belgium	12·04	Luxemberg	2·44
Germany	9·62	Holland	·43
Japan	8·13		

Non-ferrous metals and metalware.—An increase both in the quantity and value was noticed under this head during 1936. The principal imports were—aluminium linings the bulk of which was imported from the United Kingdom. Brass and copperware came from British India and pig lead from Burma.

The following table shows the quantity and value for the last five years :—

Year.	Quantity. Cwt.	Value. Rs.	Year.	Quantity. Cwt.	Value. Rs.
1932	102,019	2,510,227	1935	86,413	2,204,738
1933	69,077	1,812,663	1936	96,217	2,377,609
1934	63,923	2,083,243			

The chief countries from which non-ferrous metal and manufactures were imported and the percentage of the total value of the supplies imported from each in 1934, 1935, and 1936 are shown below :—

	1934.	1935.	1936.
United Kingdom	39·17	43·15	44·24
British India	29·57	22·19	16·44
Burma	11·09	11·80	17·54
Germany	8·35	10·43	12·28
Straits Settlements	3·89	4·95	2·56

Cotton, Raw and Manufactured.—While the increase in 1935 as compared with 1934 was nearly 2 per cent., the total value of imports during 1936 as compared with the previous year showed an increase of nearly 12 per cent., the figures for 1935 and 1936 being Rs. 16,428,241 and Rs. 18,334,836 respectively.

Raw Cotton.—The quantity imported dropped from 21,723 cwt. to 13,463 cwt. or by over 38 per cent. as against 1935 which recorded a sensational rise of 240 per cent. as compared with 1934. The sole source of supply was British India.

Cotton Waste.—Imports of cotton waste increased from 3,928 cwt. valued at Rs. 49,598 in 1935 to 4,148 cwt. valued at Rs. 58,394 in 1936. Sixty-one per cent. of the total imports were supplied by British India and 38 per cent. by the United Kingdom.

Cotton Yarn and Twist.—The total imports of yarn and twist showed an increase of 52,166 lb. or nearly 31 per cent. as compared with 1935. Bleached increased from 57,980 lb. to 80,105 lb. ; dyed from 93,891 lb. to 121,217 lb. ; grey from 16,000 lb. to 20,476 lb.; and "other" decreased from 1,800 lb. to 45 lb.

Cotton Piece Goods.—An increase of over 20 per cent. or 11,152,760 yards in total imports of cotton piece goods with a corresponding increase in value of 16 per cent. (Rs. 2,260,821) was recorded during 1936. The increase is fairly representative of a return to normal conditions when the unusual decrease in 1935, due to large excesses of stock from 1934, is eliminated.

The following table shows the quantity and value of piece goods of all kinds imported from the chief supplying countries during 1935 and 1936 with percentages of the total inserted:—

	Quantity.	
	1935. Yards.	1936. Yards.
United Kingdom	28,629,054 (51 per cent.) ..	31,627,285 (47 per cent.)
Japan	6,467,735 (12 ,,) ..	10,348,731 (15 ,,)
British India	19,514,880 (35 ,,) ..	23,635,773 (35 ,,)

	Value.	
	1935. Rs.	1936. Rs.
United Kingdom	7,904,290 (56 per cent.) ..	8,378,661 (51 per cent.)
Japan	1,395,607 (10 ,,) ..	2,379,569 (15 ,,)
British India	4,305,125 (31 ,,) ..	4,946,768 (30 ,,)

On the total quantity imported during 1936, the position maintained by the three principal countries was nearly the same as in the previous year. The share of the United Kingdom was slightly reduced from 51 per cent. to 47 per cent., while that of Japan increased from 12 per cent. to 15 per cent. There was no change in volume of imports from British India.

As compared with the previous year the United Kingdom's share was reduced by about 319,000 yards in bleached goods and 351,000 yards in grey goods, while an increase was recorded in printed and dyed goods of about 2,528,000 yards and 1,231,000 yards respectively. There was an increase both in quantity and value in the imports of bleached, dyed and printed goods as against 1935. Grey goods showed a decrease.

The following statements compare the total imports from the leading countries in regulated cotton and artificial silk textiles during the past five years with those for the basic period upon which quotas were fixed :—

Cotton Piece Goods.	Average. (1927-31.)	1932.	1933.	1934.	1935.	1936.
United Kingdom	23,582,332	15,729,465	9,555,475	11,680,627	28,445,154	31,627,285
British India	14,511,797	11,038,730	8,997,429	12,212,598	19,242,146	23,635,773
Holland	4,948,006	490,780	37,177	38,122	402,192	69,278
Japan	11,682,574	40,365,999	41,519,879	52,701,500	6,467,669	10,348,731
Art Silk Piece Goods.						
United Kingdom	850,129	270,310	716,111	312,691	450,342	959,013
British India	202,100	761,037	1,067,294	1,169,269	953,600	426,977
Japan	1,213,438	6,107,434	6,398,466	4,342,138	953,963	1,134,793

Japanese actual imports fell short of the quota by a million and a half yards on account of releases in September, 1934, being debited against importers' prospective licences.

The following table shows the imports from the United Kingdom and British India respectively in each class during the basic period and for 1935 :—

Imports of Textiles.

	Average, 1927-31.				
	Bleached. Yds.	Dyed. Yds.	Grey. Yds.	Printed. Yds.	Art Silk. Yds.
United Kingdom	11,325,691	3,087,120	2,436,880	6,732,641	850,129
British India	267,705	14,074,553	117,609	61,407	202,100
Total	11,593,396	17,161,673	2,554,489	6,794,048	1,052,229

	1936.				
	Bleached. Yds.	Dyed. Yds.	Grey. Yds.	Printed. Yds.	Art Silk. Yds.
United Kingdom	13,179,194	8,221,464	819,702	9,314,072	959,013
British India	2,494,894	19,694,015	1,213,905	7,079	426,977
Total	15,674,088	27,915,479	2,033,607	9,321,151	1,385,990

The United Kingdom has more than maintained her recovery of previous trade in bleached, dyed, and printed cotton piece goods ; while in artificial silk piece goods she has now fully recovered her previous trade ; while British India has gone ahead in bleached, dyed, and grey but dropped in printed cotton. Art silk from British India has registered a drop but imports are well above the average for the basic period. The gain by the United Kingdom of nearly 40 per cent. in printed is especially noteworthy ; on the other hand imports in this class from India have fallen almost to zero.

The reduction in the average price of United Kingdom textiles in all classes is still significant—the most marked reductions being in grey and other goods of which the United Kingdom's share has dropped from 50 per cent. to 38 per cent. and 37 per cent. to 21 per cent. respectively. This obviously shows the effort made to compete successfully in the cheaper lines of goods which are most in demand. The value of British India dyed cotton piece goods is very slightly more than it was in the previous year, whilst the value of other goods from the same source has dropped considerably. The average price of goods from Switzerland has shown a marked increase from 6 per cent. to 37 per cent.

The rise in the price of Japanese textiles, which in 1935 exceeded those of British India in all classes, and even that of United Kingdom in artificial silk, is still being maintained. The principal causes for this rise are the special demand for particular types of textiles which Japan had previously supplied and the shortage of stock due to regulation.

Imports of Japanese artificial silk made up apparel increased in quantity by over 150 per cent., but imports of Japanese apparel "other" (of which the bulk is cotton) fell by nearly 50 per cent.

Imports of Apparel.

	1934.		1935.		1936.	
Apparel.	United Kingdom. Doz.	Japan. Doz.	United Kingdom. Doz.	Japan. Doz.	United Kingdom. Doz.	Japan. Doz.
Outer and inner garments—						
Silk and Art silk	2,148	10,421	2,210	26,634	1,375	68,826
Wool	1,822	1,682	1,495	2,816	1,288	1,902
Other	7,707	33,988	6,942	216,874	5,703	110,098
Apparel, n.e.s.						
Silk and art silk	1,498	22,113	1,852	25,112	1,659	17,473
Wool	3,557	11,874	1,458	8,362	1,807	4,672
Other	4,360	20,674	3,794	13,962	4,178	19,994

Lace and Net.—The quantity imported showed a marked increase (79 per cent.) over the previous year, the figures for 1936 being 3,168,484 yards valued at Rs. 171,560, as against 1,771,366 yards valued at Rs. 157,155 in 1935. The United Kingdom though maintaining the first place, supplied only 49 per cent. of the total imports, as compared with 75 per cent. in 1935. The other main sources of supply were Japan and France which supplied 857,780 yards and 625,066 yards respectively.

Embroidery.—Total imports fell from 999,917 yards valued at Rs. 48,599 in 1935 to 881,678 yards valued at Rs. 42,979 in 1936, a drop of nearly 12 per cent. Switzerland increased her imports from 298,387 yards in 1935 to 521,791 yards in 1936 and with 41 per cent. of the total imports regained the place she had lost to Japan who showed a decrease of 36 per cent. or 205,360 yards as compared with the previous year.

Thread.—The total imports during the year under review rose to 146,977 lb. valued at Rs. 466,664, as compared with 119,033 lb. valued at Rs. 357,952 in 1935. Of this total the United Kingdom contributed 120,037 lb. or over 81 per cent. valued at Rs. 400,813.

Kerosene Oil.—As compared with the previous year the total imports showed a decrease of over a million gallons, the figure for the year being 5,991,413 gallons valued at Rs. 2,425,490, as compared with 7,337,502 gallons valued at Rs. 3,896,262 in 1935. The amount removed for home consumption was 7,031,076 gallons. As stated in my note on liquid fuel the system of bulk importation renders comparison of annual importations misleading. Sumatra continued to be the chief supplier sending over 99 per cent. of the total imports.

The total imports of bulk and case oil were as follows :—

Year.	Gallons.	Value. Rs.	Year.	Gallons.	Value. Rs.
1933	7,429,949	4,452,397	1935	7,337,502	3,896,262
1934	8,752,220	5,276,987	1936	5,991,413	2,425,940

Petrol.—The quantity entered for home consumption during 1936 was short of the corresponding figure for 1935 by 736,450 gallons. The decrease in the actual imports was 1,318,329 gallons in quantity and Rs. 1,050,951 in value as compared with 1935, the figures for the year being 8,798,243 gallons valued at Rs. 4,402,112. The decreased consumption may be attributed in part to the lower petrol consumption of the "Baby" motor cars which have gained popularity in recent years, but bulk importations and releases from bond have hitherto rendered the record of twelve months importations on clearances an uncertain guide to consumption. With the inauguration of the new system of release from bond, the figures of entry for home consumption will become a far more reliable guide than heretofore.

The imports for the last eight years have been as follows :—

Year.	Gallons.	Year.	Gallons.
1929	10,501,597	1933	7,628,165
1930	11,446,509	1934	10,664,414
1931	8,844,953	1935	10,116,572
1932	8,190,973	1936	8,798,243

Motor Vehicles.—The total number of vehicles imported during the year decreased from 3,395 valued at Rs. 6,256,344 to 2,556 valued at Rs. 4,630,453, of which 1,985 vehicles valued at Rs. 3,501,105 came from Empire sources.

Motor Cars.—There was a marked decrease of nearly 25 per cent. in the imports of motor cars as compared with the previous year. The total imports dropped from 2,384 in 1935 to 1,801 in 1936. 1,607 cars which represented over 89 per cent. of the total imports and valued at Rs. 2,842,600 came from the United Kingdom, as compared with 2,004 cars in 1935. Imports from the United States of America dropped from 168 to 74, while Germany increased her share from 43 to 62. The number from Italy and France remained unchanged as compared with 1935.

Motor Lorries.—The imports of motor lorries dropped from 947 valued at Rs. 1,945,133 in 1935 to 684 valued at Rs. 1,390,216. Out of the total of 684, the United Kingdom supplied 250 and the United States of America 345, as compared with 252 and 407 respectively in 1935. The imports of Canada decreased from 204 to 24 and those of Germany from 82 to 65, of which 57 were of the Diesel-engined type.

The following table shows the total number and value of cars and lorries imported during the last five years :—

Year.	Motor Cars.		Motor Lorries.	
	Number.	Value. Rs.	Number.	Value. Rs.
1932	768	1,272,040	134	263,866
1933	932	1,585,199	203	378,108
1934	1,913	3,501,094	893	1,506,062
1935	2,384	4,277,903	947	1,945,133
1936	1,801	3,202,668	684	1,390,216

Motor Cycles.—The number of motor cycles imported increased from 64 valued at Rs. 33,308 in 1935 to 71 valued at Rs. 37,569 in 1936 and consisted of 67 cycles from the United Kingdom, 3 from Germany, and 1 from the United States of America.

Tea Chests.—As compared with 1935, there was an increase of nearly 10 per cent. in the quantity with a corresponding increase of over 15 per cent. or Rs. 373,334 in value. The imports from Japan rose from 47 per

cent. in 1935 to 52 per cent. in 1936, while those of Finland dropped from 37 per cent. in 1935 to 26 per cent. in 1936. Poland supplied 6 per cent. of the imports and the United Kingdom improved her share by 6,631 chests as against 5 in 1935. So long as tea control is in force imports are likely to remain static at slightly less than the present quantity, until the export quota for tea is increased.

There was a further increase in the average value per chest from all countries from 88 cents in 1935 to 92 cents. The price of the Japanese chests rose from 62 cents to 63 cents and that of the non-Japanese chests increased from 98 cents to Re. 1·25.

The following table shows the imports with value for the last four years :—

Year.	Quantity. Number.	Value. Rs.	Year.	Quantity. Number.	Value. Rs.
1933	3,494,221	2,633,717	1935	2,785,456	2,456,587
1934	3,459,150	2,780,233	1936	3,049,994	2,829,921

Cattle, Buffaloes, Sheep, and Goats.—The importation of cattle and buffaloes from Asiatic and African ports is prohibited at all ports except Kayts, where cattle (other than those for slaughter) may be imported on licence from the Government Veterinary Surgeon.

The importation of sheep and goats is prohibited except under licence. The number allowed to be imported was limited to 2,500 per mensem from February, 1936.

The following table gives the number and value of importations in 1935 and 1936 :—

	1935.		1936.	
	Number.	Value. Rs.	Number.	Value. Rs.
Cattle	486	32,466	472	40,539
Buffaloes	—	—	—	—
Sheep	2,274	20,378	1,851	19,755
Goats	33,555	633,357	30,053	597,649

Horses.—The number of horses imported increased from 137 in 1935 to 147 in 1936. Of these, 74 came from the United Kingdom, 59 from British India (chiefly exports re-imported), 12 from Australia and 2 from the Straits Settlements.

Notes on Principal Exports.

The more noticeable features of the export trade for 1936 are dealt with in the succeeding paragraphs.

The following table shows the quantities of tea exported during the last ten years in millions of pounds and the average prices per lb. on the Ceylon market for the same period :—

Year.	Million Pounds.		Average Price per lb. Rs. c.
1927	227		0 94
1928	237		0 85
1929	251		0 82
1930	243		0 75
1931	244		0 57 12/32
1932	253		0 42 1/2
1933	216		0 56 1/4
1934	219		0 66 1/2
1935	212	United Kingdom	0 70
		Other countries	0 65 2/3
1936	218	United Kingdom	0 71 1/2
		Other countries	0 67 9/10

Tea.—The quantity of tea exported increased by 6 million pounds, and the value by 7½ million rupees, representing respectively an increase of 2·8 per cent. in quantity and 5·1 per cent. in value. The average increase in value of exports per pound was about 1½ cents on teas shipped to the United Kingdom and 2 cents on other teas. Favourable climatic conditions prevailed in the earlier part of the season and Ceylon appeared at one time to have wiped off a great part of the 16,000,000 lb. of exportable rights outstanding on April 1, 1936, but export slackened off considerably later in the year. The United Kingdom took about 1½ million pounds more than in 1935. Australia took 600,000 pounds less. Canada, having presumably worked off her heavy purchases made at the end of 1934, took about 3½ million pounds more, an increase of 53 per cent. New Foundland took an additional 8 per cent. New Zealand purchases showed a slight increase as did those of the Union of South Africa (+4 per cent.). Of foreign purchases, shipments increased to Egypt (+11 per cent.), Tunis (+10 per cent.), Iran (+280 per cent.), and the U. S. A. (+6 per cent.). The increase in exports to Iran are perhaps due to the stoppage by the Government of India of the leakage of uncouponed tea through Baluchistan. The above represent quantities exported and not values.

The following statement gives approximate percentages of the total exports taken by the chief buyers of Ceylon tea during the last three years :—

	1934. Per Cent.	1935. Per Cent.	1936. Per Cent.
United Kingdom	71·	67·89	66·64
United States of America	4·77	5·50	5·68
Australia	5·46	6·34	5·89
Union of South Africa	3·47	4·62	4·67
New Zealand	3·37	4·51	4·54
Canada	4·03	3·08	4·56
Egypt	1·53	1·27	1·37
Other countries	6·37	6·79	6·65

The following table shows the exports of tea to the United Kingdom, British Possessions, and foreign countries and as ships' stores during 1936 as compared with the previous year :—

	1935. lb.	1936. lb.	Increase lb.	Decrease. lb.
United Kingdom	143,937,464	145,379,967	1,442,503	—
British Possessions	44,343,309	47,075,872	2,732,563	—
Foreign countries	23,803,198	25,611,828	1,808,630	—
Ships' Stores	69,131	81,774	12,643	—

The average prices of the major coconut products advanced still further in 1936. Desiccated coconut value increased by 8 per cent., copra by 25 per cent., and coconut oil by 17 per cent. Exports of desiccated coconuts and of coconut oil fell both in quantity and total value, while exports of copra increased in both respects, owing to the existence of a more favourable market for this commodity in British India, which took 95 per cent. of total exports in 1936 compared with 75 per cent. in 1935. This is a very considerable change in orientation of copra exports, having regard to the fact that in 1931 British India's purchase of this commodity amounted to only 1·2 per cent. of total exports, and it is to be hoped that a satisfactory alternative outlet will be forthcoming should the Indian market even prove unable to absorb such large quantities. The remaining items of coconut produce are dealt with in more detail below.

5——J. N. 65863 (6/37)

The following table shows the quantities, values, and the average prices of the three chief products exported during the past five years :—

Year.	Quantity.			Value.			Average Price per Cwt.		
	Desiccated Coconuts.	Copra.	Coconut Oil.	Desiccated Coconuts.	Copra.	Coconut Oil.	Desiccated Coconuts.	Copra.	Coconut Oil.
	Cwt.	Cwt.	Cwt.	Rs.	Rs.	Rs.	Rs. c.	Rs. c.	Rs. c.
1932	699,266	913,987	1,025,040	7,150,151	8,284,294	14,475,109	12 8	8 49	14 36
1933	789,850	1,286,791	1,061,394	6,746,623	6,828,435	10,800,402	8 73	5 99	10 52
1934	646,710	2,109,379	1,396,865	4,134,745	9,244,405	10,460,714	6 39½	4 38¼	7 48⅞
1935	664,354	975,213	1,109,353	7,307,560	7,818,398	13,646,579	10 0	8 1⅞	12 30⅛
1936	601,774	1,035,476	689,229	7,041,825	10,077,212	9,948,909	11 69¼	9 73⅗	14 44

The distribution of the total value of all coconut products between the Empire and the foreign countries was as follows :—

	Value.		Percentage of Total.	
	1935.	1936.	1935.	1936.
	Rs.	Rs.		
British Empire	20,998,840	23,720,387	58·25	70·68
Foreign countries	15,046,867	9,838,159	41·75	29·32
Total	36,045,707	33,558,546

BRISK BUSINESS.

Coconuts, fresh.—About 17,000,000 nuts were exported in 1936, as against 21,000,000 in 1935 and 31½ millions in 1934. The total value of exports was Rs. 916,000 in 1936, against Rs. 1,111,000 in 1935. As in the previous year British India was the largest purchaser (48 per cent. by value, as against 42 per cent.) in 1935. The United Kingdom with 25 per cent. by value was again a good second and Egypt 19 per cent. by value third.

Coir Yarn.—Exports in 1936 amounted to 86,000 cwt. valued at Rs. 813,000, as compared with 107,000 cwt. valued at Rs. 1,108,000 in 1935. The respective value percentages taken in the leading purchases were—

	1936.	As compared with 1935.
United Kingdom	.. 31 per cent.	.. 26 per cent.
Germany	.. 28 per cent.	.. 33 per cent.

The average value was Rs. 9·42, as compared with Rs. 10·32 in 1935.

Coir Rope.—The quantity exported fell from 8,475 cwt. valued at Rs. 89,682 in 1935 to 8,159 cwt. valued at Rs. 88,949 in 1936, a comparatively trivial change. Once more practically the entire bulk went to the Straits Settlements.

Bristle Fibre.—Exports increased from 224,207 cwt. valued at Rs. 1,171,894 in 1935 to 242,809 cwt. valued at Rs. 1,416,330 in 1936. The largest purchaser was once more Japan (40 per cent. by value). Belgium (16 per cent.), France (16 per cent.), and Germany (14 per cent.) were the next best customers. Values rose slightly from Rs. 5·23 per cwt. to Rs. 5·83 per cwt.

Mattress Fibre.—Exports rose in volume from 478,680 cwt. to 573,187 cwt. but fell in total value from Rs. 1,815,657 to Rs. 1,705,807, a drop in value from Rs. 3·79 to Rs. 2·98 per cwt. The biggest purchasers were the same as in 1935, viz., United Kingdom (40 per cent.) and South Africa (13 per cent.). The U. S. A. (10 per cent.) displaced Australia for the third place.

Coconut Poonac.—Total exports decreased from 467,565 cwt. valued at Rs. 1,600,861 to 303,216 cwt. valued at Rs. 1,146,527. The average value increased from Rs. 3·43 to Rs. 3·78 per cwt. Belgium took slightly more by value but rather less by quantity. Her purchases represented 95 per cent. of total exports.

Coconut Shell Charcoal.—The quantity exported decreased from 153,342 cwt. to 135,017 cwt. but total value increased from Rs. 365,608 to Rs. 377,137. Average value increased from Rs. 2·38 to Rs. 2·79 per cwt. The United Kingdom became the largest purchaser (50 per cent.) with France taking most of the balance (48 per cent.). The future of this commodity, which is largely used for gas masks, is uncertain in view of the reported discovery of cheap efficient substitutes.

Rubber.—Exports decreased in quantity from 120,478,543 lb. to 111,823,140 lb. (exclusive of imported rubber re-exported), but increased in value from 38,393,614 to Rs. 46,840,344. The average price was 42 cents, as compared with 31¾ cents in 1935. The price of rubber had not reached 40 cents a pound since 1929, and the event is worthy of special mention. The continuation of restriction has had an ameliorating effect far more rapid than in the case of tea. 8,165,724 lb. of imported

rubber valued at Rs. 3,366,427 were re-exported, a quantitative increase over 1935 re-exports of 8 per cent. The bulk of this re-export rubber went to the U. S. A.

The main purchasers of Ceylon rubber were U. S. A. (58 per cent.), United Kingdom 14 per cent., France 5 per cent. and Germany 4 per cent. Last year's figures were U. S. A. 42 per cent., United Kingdom 26 per cent., France 5 per cent., and Germany 6 per cent.

Rubber Latex.—There was a considerable decrease in exports of rubber latex. Exports amounted to 11,075, lb. valued at Rs. 4,554, as compared with 42,831 lb. valued at Rs. 14,122 in 1935. Practically the entire export went to the United Kingdom.

The following table shows the exports of Ceylon rubber and the average price per lb. during the last five years :—

Year.	Quantity. lb.	Average Price per lb. Rs. c.	Year.	Quantity. lb.	Average Price per lb. Rs. c.
1932	111,241,860	0 11¾	1935	120,478,543	0 31 $\frac{9}{10}$
1933	142,317,027	0 15¾	1936	111,823,140	0 41$\frac{4}{5}$
1934	178,556,182	0 31¾			

Cacao.—Exports amounted to 58,921 cwt. valued at Rs. 2,030,548, as compared with 69,468 cwt. valued at Rs. 1,298,993 in 1935. Although the quantity exported dropped 15 per cent. the value of exports rose by 56 per cent., the value per cwt. being Rs. 34·42 per cwt. as against Rs. 18·73 in 1935. This represents a very notable recovery. Exports to the United Kingdom increased by 210 per cent. in value, to Canada by 155 per cent., to Australia by 95 per cent., and to the Philippines, still Ceylon's best customer, by 15 per cent. The Philippines took 35 per cent. of Ceylon's exports. As foreshadowed in my 1935 report, Mexican exports drastically disappeared.

Exports for the last three years were as follows :—

Year.	Quantity. lb.	Value. Rs.	Year.	Quantity. lb.	Value. Rs.
1934	9,112,845	1,802,382	1936	6,599,152	2,030,548
1935	7,780,376	1,298,993			

Cinnamon.—There was no marked increase or decrease in the quantity of cinnamon quills exported but values rose from Rs. 1,435,491 to Rs. 1,518,929. The value per cwt. was Rs. 39·18, against Rs. 36·91 for 1935. Mexico was again the largest purchaser taking 34 per cent. by value of the entire exports. Other large purchasers were Germany (10 per cent.), U. S. A. (9 per cent.), Spain (8 per cent.), and United Kingdom (7 per cent.). The value of cinnamon chips exported also increased, the quantity also increasing very slightly. The biggest purchasers were again the United Kingdom and Australia.

The quantities and value of exports together with the average prices for the last six years are shown below :—

Year.	Quantity.		Value.		Average Price per cwt.	
	Quills. Cwt.	Chips. Cwt.	Quills. Rs.	Chips. Rs.	Quills. Rs. c.	Chips. Rs. c.
1931	35,261	6,680	1,115,756	61,628	31 83	7 93
1932	40,166	8,101	948,518	44,380	23 90	5 43
1933	41,224	7,445	954,573	32,710	22 88	4 33
1934	38,165	6,081	1,124,884	38,063	29 47½	6 26
1935	38,888	7,537	1,435,491	54,525	36 91	7 23½
1936	38,764	7,974	1,518,929	66,855	39 18½	8 38

Arecanuts.—There was a considerable increase in quantity and value of arecanuts exported. The quantitative increase was 14 per cent. and value per cwt. rose from Rs. 9·54 to Rs. 11·26. Eighty-eight per cent. of exports went to British India.

The following statement gives details of the exports during the last four years :—

Year.	Quantity. Cwt.	Value. Rs.	Year.	Quantity. Cwt.	Value. Rs.
1933	104,725	1,285,134	1935	93,383	890,698
1934	90,069	995,555	1936	106,825	1,202,541

Cardamoms.—Exports were about the same in quantity, but total value rose from Rs. 274,751 to Rs. 425,907, representing a rise in value per cwt. of 57 per cent. The largest purchasers were U. S. A. (17 per cent.) and Denmark (14 per cent.)

Plumbago.—Exports fell slightly in quantity and appreciably (—27 per cent.) in value, the average value per cwt. being about Rs. 5·61 as compared with Rs. 7·42 in 1935. This was one of the few export industries of importance which failed to show any improvement. The largest purchasers were the same as in the previous year. The United Kingdom and Germany took increased quantities.

The following table shows the quantity and value of plumbago exported since 1931 :—

Year.	Quantity. Cwt.	Value. Rs.	Year.	Quantity. Cwt.	Value. Rs.
1931	134,413	1,225,331	1934	231,385	1,654,681
1932	122,009	1,023,283	1935	278,168	2,064,518
1933	191,173	1,213,561	1936	270,295	1,516,968

The following table shows the quantities taken by the chief purchasing countries :—

Year.	Japan. Cwt.	United States of America. Cwt.	United Kingdom. Cwt.	Germany. Cwt.
1931	24,937	53,308	17,345	19,951
1932	32,655	24,233	23,846	13,745
1933	71,514	44,226	29,592	16,822
1934	78,500	67,078	32,567	19,457
1935	82,820	88,800	51,669	20,297
1936	76,869	83,841	57,361	25,213

Citronella Oil.—A further decrease was registered both in quantity (—90 per cent.) and value (—25 per cent.). The average price per lb. fell from 49 cents to 40⅓ cents. The U. S. A. took 46 per cent. and the United Kingdom 17 per cent. of the quantity exported.

The exports of citronella oil for the last five years were as follows :—

Year.	Quantity. lb.	Value. Rs.	Year.	Quantity. lb.	Value. Rs.
1932	1,279,801	1,202,918	1935	1,399,764	686,418
1933	1,459,423	1,273,832	1936	1,271,039	513,268
1934	1,527,868	803,829			

SHIPPING.

3,954 vessels with a total tonnage of 13,008,403 tons entered the ports of the Island of Ceylon in 1936, as against 4,032 vessels with a tonnage of 13,234,788 in 1935.

The following table shows the classification under the four general heads :—

	1935.		1936.	
	No.	Tons.	No.	Tons.
Merchant vessels, other than sailing and coasting vessels ..	2,977	12,207,122	2,883	11,871,011
Merchant vessels (called to coal, oil, &c.)	218	668,301	214	703,189
Sailing vessels, other than coasting vessels ..	764	65,044	768	64,194
Warships and transports* ..	73	294,321	89	370,009
	4,032	13,234,788	3,954	13,008,403

* Warships' displacement tonnage.

Excluding warships and transports 3,865 vessels entered the ports in Ceylon with a tonnage of 12,638,394, as against 3,959 vessels in 1935 with a tonnage of 12,940,467 tons.

The number of merchant vessels other than sailing and coasting vessels entering the ports of the Island decreased by 94 and 73 respectively as compared with 1935 and 1934 ; there was a decrease of 4 in the number of vessels calling to take in coal, oil, &c.

The following table shows the number of British and foreign vessels, other than sailing and coasting vessels which have entered Ceylon ports since 1930 :—

	1930.	1931.	1932.	1933.	1934.	1935.	1936.
British ..	2,206	2,246	2,099	1,983	2,061	2,103	1,993
Dutch ..	211	167	123	137	143	134	149
French ..	137	122	126	126	123	126	109
German	293	256	198	198	217	218	203
Italian ..	131	129	120	132	138	101	99
Japanese	171	199	208	175	194	217	215
Norwegian	127	106	107	131	148	156	171
Other Foreign Nations	165	153	115	126	140	140	158
Total Foreign ..	1,235	1,132	997	1,025	1,103	1,092	1,104
Percentage—							
British	64	67	68	66	65	66	64
Foreign	36	33	32	34	35	34	36

It will be noticed that British shipping has fallen by 2 per cent. as compared with the previous year. Amongst the foreign callers Dutch and Norwegian show an increase ; Japan occupied the first place.

Excluding warships and transports, coasting vessels and merchant vessels which called only to coal, oil, &c., the distribution according to flags was as follows :—

	1935.		1936.	
	Number.	Tons.	Number.	Tons.
British ..	1,959	7,197,681	1,890	6,914,615
British Colonial	764	65,044	768	64,194
Total British vessels ..	2,723	7,262,725	2,658	6,978,809
American ..	49	257,151	48	232,868

BUREAU OF INDUSTRY AND COMMERCE.

To assist in the development of the industrial and commercial activities of Ceylon a Bureau of Industry and Commerce was formed as a section of the Department of the Registrar-General who assumed charge of these subjects in his capacity as Director of Commercial Intelligence.

The industrial policy of the Bureau is to give technical advice on industries, conduct surveys and initiate inquiries into particular industries and generally to help in the industrialization of the country. Owing to limitations of staff the industrial activities of the Bureau have not been organized to their fullest extent. The absence of a laboratory for research work and for dealing with technical problems is a serious handicap. The partial transition of Ceylon from agriculture to industry and the progressive consciousness of the public to the advantages of industrialization have created special problems which call for separate attention. One of the major experiments of the Bureau was to give practical instruction in spinning and weaving of coir and textile goods through peripatetic parties, and as an encouragement to local industry a scheme for supplying coir and textile machines on easy hire-purchase terms was introduced. From the ready response to the scheme the extent to which the " industrial fever " has taken hold of the country may be gauged.

Echoes of the cry for industrialization were heard in the State Council. Numerous motions directed towards fostering the nascent spirit of industrialization were introduced in the State Council—some of them with far-reaching implications. The motion of Mr. Rajapaksa to establish a model factory at State expense for the distillation of citronella oil, and the motion of Mr. Sri Pathmanathan for the establishment of a similar factory for the manufacture of cigars, cigarettes, and pipe tobacco may be instanced as examples. As a direct incentive to private initiative the State Council voted a sum of Rs. 100,000—for giving loans on favourable terms of repayment—to local industries. As a

* Excluding coasting vessels.

further concession to the claims of industry the proposal to separate its supervision from the Department of the Registrar-General and create a distinct and separate Industrial Department was considered by a Sub-Committee of the Executive Committee of Labour, Industry and Commerce. At the moment of writing the matter is still pending.

Useful surveys were conducted by the Bureau. The match and soap industries which have now established themselves as permanent features of the country's industrial enterprises were given special recognition in the decision of the Executive Committee of Labour, Industry and Commerce to introduce special legislation for their control and supervision. Neither of these Bills has yet found a place in the Statute book. Information on manioca (tapioca) cultivation, tiles, mat weaving, hand loom weaving and carpentry collected in surveys has afforded material for the definition of a new industrial policy which must await the decision of the State Council on the proposal to give industry a separate place in the Sun.

The primary object of the commercial side of the Bureau is to foster the export trade of the country. The Bureau is in direct communication with the several consular representatives throughout the world and is in a more favourable position to offer local traders the advantages of a reliable and effective Government organization. The services of the Bureau include—

(1) furnishing of information relating to market openings and trade prospects.
(2) furnishing information in answer to trade inquiries.
(3) advertising Ceylon by participation in Exhibitions and fairs at home and abroad.
(4) initiating representations by the Ceylon Government in regard to tariff duties, &c., in Ceylon ; and
(5) assisting business visitors to Ceylon by means of letters of introduction.

A definite expansion in the activities of the Bureau was made in 1935 with the appointment of a Trade Commissioner at London. " Ceylon House " standing in Aldwych, Strand, London, is now a permanent feature of Ceylon's first experiment in appointing her own consular representatives. The functions of the Trade Commissioner include the fostering of the export trade of Ceylon, the supplying of market openings in business, trade and industry, the participation in publicity events like Exhibitions and Fairs, &c. " Ceylon House " also maintains a permanent exhibition of Ceylon products. The limitations of space do not permit a full representative display but it is hoped before long to secure more prominent premises for the activities of this rapidly expanding limb of the Bureau.

The importance of the United Kingdom market to Ceylon cannot be stressed too much ; on an average over 45 per cent. of the Island's sea-borne trade is with the United Kingdom. This policy of appointing her own Trade Commissioners at important market centres is the outcome of the demand for State surveillance of Ceylon's export trade. The germs of a world-wide consular service have been laid ; other important markets will soon be linked up. The first experiment was a success, but it is still too early to estimate the benefits to the export trade. It can be asserted however that Ceylon exporters are now in closer touch

with foreign importers than ever before. At the moment of writing a permanent Ceylon trade representative at Bombay has been appointed as the second experiment, and will shortly assume duties.

With a view to giving Ceylon products the maximum publicity the Bureau has endeavoured to participate in as many fairs and exhibitions as possible. Exhibitions are a valuable medium of publicity but it is not every exhibition in which Ceylon can participate. The major portion of Ceylon produce consists of raw products but exhibitions of raw produce are not as popular or spectacular as those for manufactured products. The annual British Industries Fair which provides one of the best mediums for publicity for industrial countries is not quite suited to Ceylon's needs. The few industries that this country can boast of are not yet of the standard of perfection to compete in the world market. The Empire Exhibition held at Johannesburg, South Africa, in 1936 was a different proposition. Ceylon sent her own trade representative. A representative display of raw material was exhibited, and a large volume of business was done. It is still too early to say whether the interest created in Ceylon produce will assure this country a permanent market in South Africa. The Empire Exhibition will however settle finally an important contentious point. It will show the value of the benefit derivable from participating in foreign exhibitions.

Among the other activities of the Bureau, the Ceylon Trade Journal, the official organ of the Bureau, may be mentioned. First published in November, 1935, the Journal aims at giving readers at home and abroad the commercial products exported from Ceylon, with monthly and quarterly analyses of trade, periodical reviews of the economic conditions of the country, indices of prices, production, exports, &c. The Journal enjoys a world-wide circulation and copies of it are supplied to all trade associations, commercial bodies, and public institutions abroad.

CHAPTER VIII.

Wages and the Cost of Living.

Labour in Ceylon.

1.—*Agricultural.*

About 850,000 acres are cultivated in paddy. The whole of this area is worked by village labour usually by the owner or lessee of the land, and his relations, but frequently also by hired labour.

The Estates.—The principal crops grown under estate conditions are tea, rubber, and coconuts. Tea estates almost entirely, and rubber estates for the most part, are worked by labour imported from South India (Tamil or Telugu). A few Indians are also employed on coconut estates, but these are mostly worked by Ceylonese.

At the end of 1936 the total number of Indians on estates was roughly 665,000, as compared with 674,024 at the end of 1935. The total number of arrivals of estate labourers during the year amounted to 40,803 and the departures to 45,143.

2.—*Industrial.*

A large number of labourers are employed in various activities connected with the port of Colombo, *e.g.*, as stevedore labourers, or in the coal-yard and marine engineering works.

Wages.—Under Ordinance No. 27 of 1927 a minimum wage is fixed for Indian labourers on tea and rubber estates and the new rates of wages in force from November 16, 1934, are—

	Men. Cents.	Women. Cents.	Children. Cents.	
Up-country	49	39	29	with rice at a rate not exceeding Rs. 4·80 per bushel
Mid-country	43	35	25	
Low-country	41	33	24	

In 1927 a Commission appointed to inquire into wages earned by the harbour workers in Colombo recommended the following rates which were accepted by the employers :—

	Loading Cargo. Rs. c.	Discharging Cargo. Rs. c.
Day, Full	1 75	1 60
Broken Periods, 6 A.M. to 12 noon	1 0 (*i.e.* (87 plus 10)	0 90 (*i.e.* (80 plus 10)
12 noon to 6 P.M.	0 87 *	0 80 *
or Every half or part thereof	0 20	0 20
Night—	†	†
Full	3 50	3 20
Half	1 75 *	1 60 *
Broken Periods— For every hour between 6 P.M. and midnight	0 30	0 30

The following table shows the classification adopted by Government for daily and hourly paid labour :—

		Rates per Hour. Minimum. Cents.	Maximum. Cents.
Minor supervising grades	Class A I.	48	81
	A II.	31	63
Tradesmen	Class A III.	36	53
	A IV.	20	35
Semi-skilled labour	Class A V.	12	20
Unskilled labour	Class A VI.	8	14
Trade apprentices	Class A VII.	10	18
Women and boys	Class A VIII.	3	10

		Rates per Diem. Minimum. Rs. c.	Maximum. Rs. c.
Minor supervising grades	Class B I.	3 84	6 48
	B II.	2 48	5 4
Skilled labour	Class B III.	2 88	4 24
	B IV.	1 60	2 80
Semi-skilled labour	Class B V.	0 96	1 60
Unskilled labour	Class B VI.	0 64	1 12
Trade apprentices	Class B VII.	0 80	1 44
Women and boys	Class B VIII.	0 24	0 80

Estates employing Indian labour are required by law to pay their labourers monthly. In Colombo wages are often paid every week or fortnight.

* Subject to the qualification that wages by the hour for any fraction of a half day or half night shall not exceed the wages payable for the whole of that half day or half night.

† A full night's wages are payable when a labourer works from 6 P.M. to any fraction of the night beyond midnight.

SAWING LOGS.

Other Conditions affecting Labour.

On nearly all estates the resident labour force is provided with free housing accommodation. In Colombo a few firms make similar provision for their labourers, but in most cases the latter find their own lodgings. Indians employed by the stevedore contractors are generally housed in a "kittangi"—a sort of barrack where the men sleep together in one large room.

Medical Attention and Provision for Old Age.—Estate labourers are entitled to free medical treatment either at the estate hospital (if there is one) or at the nearest Government hospital. Other labourers are entitled to free treatment at Government hospitals if they earn less than Rs. 50 per month in wages.

Female labourers on estates are entitled to free lodgings and medical care for one month after confinement.

Indian Labour on Estates.—Sick and indigent labourers are repatriated to India at the expense of the Immigration Fund.

Most estates pay a pension to deserving labourers who are no longer able to work. Free meals are usually given daily to children.

The Workmen's Compensation Ordinance, No. 19 of 1934, came into operation on August 1, 1935. It provides for compensation to be paid by the employer on the lines of the Indian Act to every workman who is injured by accident arising out of and in the course of his employment and to the dependents of workmen who have died as the result of such accident.

The Trade Unions Ordinance, No. 14 of 1935, came into operation on November 1, 1935. It provides for the compulsory registration of all Trade Unions.

CHAPTER IX.

Education and Welfare Institutions.

Control.—Primary and secondary education in Ceylon, under the control of the Minister of Education and the Executive Committee of Education, is administered by the Department of Education, assisted by a Board of Education and 23 Education District Committees.

Board of Education.—The Board of Education is composed of 20 members nominated by the Governor. The Director of Education is Chairman and the personnel of the Board includes members of the State Council, managers of schools, and teachers. The main duties of the Board are to consider questions of legislation and to advise the Government on any other matters especially referred to it for advice. It is not an administrative or executive body and all regulations which are recommended by the Board require the approval of the Governor, and are thereafter laid before the State Council for approval.

Education District Committees.—An Education District Committee has been constituted in each Municipality and Revenue District. These Committees are appointed by the Governor, and consist partly of officials and partly of unofficials. They are responsible first for putting into effect the rules relating to compulsory education and they frame by-laws and employ attendance officers for this purpose. Secondly, they erect and maintain schools where these are required. They are financed by an annual grant from the department, which is allocated on the basis of an approved programme of works submitted each year to the department.

Schools and Attendance.—The system of education in Ceylon provides a course of education leading to University degrees in arts, and science, and diplomas in medicine and law.

The schools of Ceylon are not divided on a basis of race or nationality. All schools which are maintained by Government or assisted by means of grants are compelled by law to admit pupils irrespective of race, nationality, or religion.

Attendance at school between the ages of six and fourteen is compulsory, subject to a few exceptions. Such compulsion, however, applies only when school accommodation is provided within a reasonable distance of the residence of the pupil.

There are three distinct types of schools—schools administered directly by Government, schools assisted by Government and under the immediate control of private managers, and schools maintained by Government and managed by the Divisional Inspectors of Schools with the assistance of Local Managers.

There are 265 Maintained schools. These schools are administered under the Codes for Assisted schools but the whole cost of staff and maintenance is borne by Government funds. All new Maintained schools are placed under the management of the Divisional Inspector of Schools.

There are 1,555 Government schools, and the arrangements for the staffing of these are entirely in the hands of the department. All examinations for the issue of teachers' certificates and of otherwise testing efficiency, and all appointments, transfers, &c., are also dealt with by the department.

Assisted Schools and the Grant System.—There are in addition 2,982 Assisted schools under the immediate control of private managers. These schools receive an annual grant from the Education Department. In the case of vernacular schools the annual grant is calculated as the total amount of the salaries paid to an efficient staff plus an additional amount for maintenance. No fees are charged in vernacular schools. In the case of the English schools, however, fees are charged and from such fees the manager has to provide a fixed sum towards the salary of each teacher he employs. The grant consists of the balance of such salaries.

There are 156 schools attached to places of religious worship. These schools are supported by grants from Government funds.

In addition to Government Assisted and Maintained schools, there is a certain number of private schools which are not assisted in any way by Government funds. Such schools are, however, subject to inspection by the department.

The type of instruction given in Ceylon schools can be considered under two main headings: (i.) non-vocational instruction; (ii.) vocational instruction.

Classification of Schools.—Under the heading of non-vocational instruction is included the type of instruction which is general and academic, and by far the larger number of schools come under this class. These schools are classified as follows :—

English.	Bilingual.	Vernacular.
Collegiate	Senior Secondary	Senior Secondary
Senior Secondary	Junior Secondary	Junior Secondary
Junior Secondary	Primary	Primary
Primary		

The primary schools provide a course of instruction from the Kindergarten up to Standard V. The course usually lasts six years.

The junior secondary schools provide a course of instruction from the Kindergarten up to the School-Leaving Certificate. The course usually lasts ten years.

The senior secondary schools provide, in addition to the course for the junior secondary schools, a further course up to the standard of the London Matriculation Examination. The course usually lasts twelve years.

The collegiate school is an English school which provides a course of instruction from Form I. or Standard VI. up to the standard of the London Matriculation Examination. The course usually lasts five years.

The vast majority of students complete their education at the junior secondary stage.

In addition to the schools that come under the above classification, there is a certain number of temple schools, which are known as Pirivenas. These schools are primarily intended for the Buddhist priesthood, and are not compelled to adopt the syllabus of work used by the ordinary schools.

Vocational Schools.—Under the heading of vocational schools come those schools which give a specialized form of instruction. Apart from one Technical College, these can be divided into part-time schools and full-time schools. Under the heading of part-time instruction is included a variety of home industries which are taught to pupils in certain schools in addition to the ordinary academic course. Under the heading of full-time industrial schools come institutions for the training of teachers, technical schools, agricultural schools, and industrial schools. The course in training schools is usually one of two years. In technical schools it varies according to the subject which is studied. In agricultural schools courses are entirely for adults who intend either to teach agricultural science or to become practical agriculturists. There is a variety of full-time industrial schools. All industrial schools are conducted upon a profit-sharing principle, so that the pupils benefit by whatever articles they produce. The course is one of two or three years. The subjects in which instruction is given are :—carpentry, weaving, basket work, pottery, printing, lacquer work, blacksmith work, and a few other minor industries.

The medium of Instruction.—The medium of instruction in schools varies according to the type of schools. In vernacular schools the medium of instruction is entirely Sinhalese or Tamil. This group of schools includes 81 per cent. of all the school-going children in Ceylon.

In Bilingual schools the vernacular language is the medium of instruction for the first four or five years of school life, after which a course of English is introduced in Standard IV. Every year thereafter the number of periods allotted to English is increased. The vernacular, however, continues to be taught throughout the whole course. There are also vernacular schools where an optional course of English, for one period a day, is given in all classes above Standard III.

In the case of the third group of schools, viz., English schools, two methods are employed in giving instruction in the English language.

In the first method pupils are admitted at the earliest stage of school life, viz., the Kindergarten. Pupils admitted in this way have usually a working knowledge of English, so that their progress in mastering the language is very rapid.

The second method employed is a two-year special course in English for pupils, who go from vernacular schools to English schools. The pupils who enter this course are approximately nine years of age, and have already received instruction in their own mother tongue in the primary standards. This course is an intensive one, in which the direct method of teaching a foreign language is employed. After completing this course pupils are able to enter the ordinary standards of the English school, in which the medium of instruction is English. In the majority of such schools the vernacular languages continue to be taught throughout the upper classes.

It will be seen, therefore that in the system of instruction prevailing in Ceylon the pupils are given the following alternative courses :—(1) a full course of instruction in the vernacular languages ; (2) a full course of instruction in the vernacular languages plus a working knowledge of English ; and (3) a full course of instruction in English, not merely for pupils whose mother tongue is English, but for those who at the beginning of school life have no knowledge of that language.

SCHOOL FOR THE DEAF AND BLIND.

During the year 1936, 29 children were admitted, 18 of them being deaf and 11 blind. The total number of deaf and blind inmates at the school is classified thus :—

	School.		Industrial.		*Ex*-Industrial.		Total.
	Boys.	Girls.	Boys.	Girls.	Boys.	Girls.	
Deaf	92	53	10	—	13	—	168
Blind	54	65	20	1	23	—	163
Total	146	118	30	1	36	—	331

Many applications for admission have to be rejected for lack of room. There are a few mental defectives and one deaf and blind. They were admitted through the schools inability to diagnose their condition and cannot be removed as they have no friends and relations. One elder boy had to be sent to the lunatic asylum recently. He was apparently mentally sound on admission in early childhood but later grew mentally defective and finally insane.

Health.—There has been no serious illness of any sort, but the school has not been free of chickenpox infection almost throughout the year.

School.—For half the year the blind school has had the guidance of an expert teacher from England and in the last month the deaf school has had similar guidance. It is a matter of interest that the expert teacher finds the speech of the deaf children of the school up to a high standard, and bearing favourable comparison with results in similar schools in England. Great progress has recently been made in English schools in the teaching of the deaf with the aid of suitable apparatus, but such apparatus is expensive and needs skilled upkeep, both of which conditions the school cannot at present meet.

Industrial Work.—The girls have been moved to Broomhill, Colombo, and it is hoped to move the boys also shortly. By removal of the industrial boys and girls to special centres and by concentration on their

particular needs, it is hoped that better results in their training will follow and better results in the marketing of their products. The after-care of the industrial boys and girls is a serious problem which has up to the present met with no satisfactory solution, but it is receiving serious attention. Some deaf have found employment, but not in the trades they have been taught : they are usually set to do unskilled work at a very low rate of pay.

Orphanages.—Educational facilities are provided for orphans or destitute children. A maintenance grant of Rs. 75 is paid to the manager of an approved Orphanage or Home on account of each orphan or destitute child who is between the ages of $\frac{\text{5 and 15 (in an Assisted Vernacular school)}}{\text{5 and 17 (in an Assisted English school)}}$ at the beginning of the school year and who has been in residence at an Orphanage or Home for a period of not less than 9 months and has regularly attended a registered school during this period. Such grants during 1936 amounted to Rs. 167,695.

Reformatory.—There is only one reformatory school to which juvenile offenders are admitted. Here they are taught different trades such as gardening, carpentry, tailoring, cooking, bookbinding, ironwork, printing, weaving, &c., while undergoing their term of punishment. Ninty-five juvenile offenders were admitted during the year bringing the total to 309.

Prisoners.—There are schools for prisoners at the two jails in the Colombo District. There are 43 pupils at Mahara and 131 pupils at Welikada. Social workers conduct English classes for certain prisoners at the latter jail. The jail school at Kandy has 9 pupils.

Lepers.—There are two schools for lepers : one at Hendala and another at Mantivu which are conducted by the Sisters of the Franciscan Order. The school at Hendala consists of three sections, *i.e.*, English, Tamil, and Sinhalese containing 28, 27, and 23 pupils respectively. The ages of the pupils range from 5 to 44. The average attendance is 40. The Mantivu Leper School, also consisting of 3 sections, has 8 pupils in the English section, 10 in the Sinhalese, and 10 in the Tamil.

The Langdon Home.—In Badulla District there is one institution which receives assistance from Government for training women in industrial work and household management. After a period of training, these women go into the villages and teach the older girls reading, writing, sewing, embroidery, and lacemaking. They also give instruction in the art of clean and efficient housekeeping and also encourage the practice of thrift.

Pensions, &c.—The posts of Government teachers are pensionable and in addition they make contributions to a Widows' and Orphans' Pension Scheme. Teachers in assisted schools are eligible for a pension similar to that of Government teachers, but the pension scheme in assisted schools is on a contributory basis.

THE CEYLON UNIVERSITY COLLEGE.

The University College was established in 1921 for the purpose of affording facilities for higher education to students in Ceylon.

Numbers.—The number of students on the roll in July, 1936, the beginning of the academic year, 1936–37, was 541, including 56 women students. The figures for 1921–35 were as follows :—

1921	..	166	1926	..	313	1931	..	355
1922	..	217	1927	..	279	1932	..	377
1923	..	262	1928	..	315	1933	..	417
1924	..	262	1929	..	338	1934	..	449
1925	..	256	1930	..	394	1935	..	539

Courses.—The College offers instruction in Latin, Greek, Sanskrit, Pali English, Sinhalese, Tamil, Logic, Philosophy, History, Geography, Economics, Pure Mathematics, Applied Mathematics, Physics, Chemistry, Botany, and Zoology.

Honours courses are provided in Classics, English, Indo-Aryan (Sanskrit and Pali), History, Mathematics, Chemistry, Botany, Zoology, and Physics.

The College course is normally one of three years. At the end of the first year students take the (External) Intermediate Arts, Science, and Economics examinations of the University of London conducted in Ceylon. At the end of the third year they take the final examinations for the B.A. (General), B.A. (Honours), B.Sc. (General), and B.Sc. (Special) Degrees of the same University.

The College provides also a two-year course for a Diploma in Economics to students who have already passed the London Intermediate Examination in Science (Economics). The course is of degree standard and specially adapted to Ceylon.

Students who intend to join the medical profession are given one year's course of instruction in Physics, Chemistry, and General Biology, at the end of which they take either the First M.B. Examination of the University of London or the Pre-Medical Examination of the Ceylon Medical College, or both.

Graduates.—On the results of the examinations held in June, 1936, 39 candidates qualified themselves for the B.A. and B.Sc. degrees of the University of London.

The total number of graduates from the University College from the time of its inception in 1921 is 376, of whom 27 obtained Honours in Classics, 13 in English, 28 in History, 42 in Mathematics, 15 in Indo-Aryan, 2 in Physics, 16 in Chemistry, 6 in Botany, and 4 in Zoology.

Hostels.—Most of the students not living with their parents or relations are residing in four hostels affiliated to the College and subject to the College rules and regulations. These hostels are administered by extra-university bodies and are subsidized by the Government.

University College Council.—This Council, which consists of twenty members nominated by His Excellency the Governor, advises the Principal of the College in matters relating to the administration of the College, and the preparation for its conversion into a University.

THE CEYLON MEDICAL COLLEGE.

The Ceylon Medical College was established in 1870 in the form of a medical school capable of affording a practical education on the principles of medicine and surgery, and especially midwifery, together with a practical knowledge of Anatomy, Physiology, Materia Medica, Pharmaceutical Chemistry, and the art of dispensing. It had originally a Principal and three lecturers, and the whole course took only three years.

This course was later increased from time to time in order to keep abreast with the progress of medical science. In 1887 recognition was granted by the General Medical Council of the United Kingdom, and the diploma became registrable in Great Britain and all parts of the Empire.

In 1924 the complete extended curriculum of one year's pre-medical study (Chemistry, Physics, Biology) and five years' medical study was adopted.

The College now provides the complete course of instruction required for the practice of modern Medicine, Surgery, and Midwifery. Including the course of preliminary or pre-registration work in Physics, Chemistry, and Biology, which is provided by arrangement at the University College, Colombo, the whole course takes six years.

In addition to the complete medical curriculum, the College provides a course of instruction for a minor grade of medical practitioners, known as Apothecaries. These receive a two years' course of instruction in Anatomy, Physiology, Chemistry, Pharmacy, Pharmacology and Dispensing, Elementary Medicine, Surgery, and Midwifery, both theoretical and clinical, and Surgical Dressing, and in Hygiene and Public Health. They receive free instruction, and on passing the two Apothecaries' Examinations are employed by the Government to take charge of the Government Dispensaries and some small hospitals in the remote rural areas and villages, but are only permitted to practise while so employed in Government service and are subject to the control of the District Medical Officers. They are eligible to be registered as Pharmacists.

These Apothecaries to a large extent provide for the medical treatment of the poor villagers in remote districts and where fully qualified medical practitioners are not available.

A department for the training of pupil midwives has been added to the College. This work was formerly carried out by the Department of Medical and Sanitary Services, but from October 1, 1931, the teaching and examinations of pupils have been vested in the College Council. First and second class certificates of efficiency are conferred on successful candidates, who are then eligible to be registered as midwives. As this arrangement in practice proved difficult of administration it was discontinued from October 1, 1932. The College however continues to conduct the examinations for certificates of efficiency as midwives, the courses of instruction having been restored to the Department of Medical and Sanitary Services. The College thereby retains control of the standard of teaching.

The College is staffed by whole-time Professors, in Medicine, Surgery, Anatomy, Physiology, and Pathology, and a large number of part-time lecturers, mostly drawn from the officers of the Department of Medical and Sanitary Services.

Details of staff, fees, courses of study, and rules for students, and the history of the College, are embodied in the annual calendar, copies of which are sent free to Medical Schools in Great Britain, principal Educational Institutions, and Government departments in the Island.

The Government set up in 1928 a Post-licentiate Scholarship (suspended for the time being), which is granted yearly to the best student of the final year who qualifies in the first class within the statutory period, to enable him to obtain British qualifications and also to pursue studies and research in some special subject. The value of the scholarship is £300 per annum.

A small number of students generally discontinue study in the Ceylon Medical College and go to the United Kingdom to complete their studies.

THE LAW COLLEGE.

The Law College which is controlled by the Incorporated Council of Legal Education exists for the supervision and control of the legal education of students desiring to qualify themselves as advocates or proctors of the Supreme Court. The Council consists of the Judges, the Attorney-General, the Solicitor-General, and such other persons of standing in the legal profession as the Judges may appoint. The members hold office for three years at a time. The academic qualifications requisite for admission in the case of advocates are (1) a degree in Arts or Science of any University in the British Empire, (2) a pass in the Intermediate Examination in Arts or Science of the University of London, and in the case of proctors (1) a degree in Arts or Science of any University in the British Empire, (2) a pass in the Matriculation Examination of the University of London or the Intermediate Examination in Arts or Science of any Indian University, or the Senior Local Examination, of the University of Cambridge, or the Cambridge Senior School-Leaving Certificate, provided always that the candidate shall adduce proof that he has passed an examination in English and Latin, such examination being either the examination on which he relies for his qualification or some one or other of the aforesaid examinations of any University in the British Empire.

Admissions to the Law College take place twice annually, in the months of January and July, respectively, and the total number of students admitted during the year 1936 is as follows :—

Advocates	10
Proctors	62

The Board of Lecturers, consisting of six members, are appointed in the month of June and hold office for three years.

The examinations provided under the Rules of the Incorporated Council of Legal Education are held twice a year, also in the months of January and July, the examiners (five in number) being appointed once a year in the month of June by the Council. The under-mentioned table shows the number of students who presented themselves at the various examinations, together with the number of successful candidates in 1936 :—

	Entered.	Passed.
Advocates	81 ..	39
Proctors	371 ..	154

CHAPTER X.

Communications and Transport.

SHIPPING.

Colombo Harbour.

Introduction.—The position of Colombo at the junction of the most important trade routes in the East makes it an important port in the commerce of the East, and this natural advantage has been enhanced

by the excellent facilities for docking, bunkering, loading and unloading cargo, water supply, &c., afforded by the port to the vast tonnage of shipping navigating Eastern waters. The port of Colombo has contributed largely to the commercial and economic prosperity of the Island, and this fact is borne out by the phenomenal growth of the city of Colombo since the conversion of the open roadstead into a great artificial harbour enclosed by extensive breakwaters. Colombo is a great *entrepot*, and the volume of business passing through its Customs houses is an indication of the state of trade and general prosperity of the Island.

Trade.—The quantity of imports and exports handled in the port of Colombo in 1936 amounted to 1,609,128 tons (1,067,924 tons imports) and 541,204 tons exports), as compared with 1,605,667 tons (1,042,638 tons imports and 563,029 tons exports) handled in 1935. There has been an increase of 3,461 tons as compared with the previous year.

Harbour.—The harbour is enclosed on all sides, being bounded on the south and east by the land and on the north and west by massive breakwaters. The approach to the harbour is free from navigational dangers. Vessels drawing 33 feet can enter by the Western entrance and vessels drawing 27 feet can enter by the Northern entrance. The Western entrance channel is 630 feet wide, with a navigable depth of 36 feet L. W. O. S. T., and the Northern entrance channel 550 feet wide, with a navigable depth of 30 feet L. W. O. S. T. The sheltered area of the harbour amounts to 643 acres at low water, of which 246 acres have been dredged to 36 feet and over, 140 acres to a depth varying between 36 feet and 33 feet, and 106 acres to between 33 feet and 30 feet ; the remaining 151 acres have a depth of less than 30 feet.

Accommodation for Vessels.—Berthing accommodation, exclusive of the Graving Dock, Guide Pier, and Oil Jetties, is available for 35 vessels in the north-east monsoon and 38 vessels in the south-west monsoon. Berths are available in either monsoon for vessels drawing up to 33 feet of water. One of these berths is for vessels of unlimited length.

Railways.—A broad gauge railway runs through the port premises and is connected with the main railway system of the Island, thus affording direct communication with all parts of the Island and Southern India. Sidings are provided at different places on the waterside. The length of the railway is 6 miles 19 chains, but the total mileage of railway used, including sidings, &c., is $14\frac{5}{8}$ miles. The port railway is available only for the conveyance of goods, the tonnage of goods handled during 1936 being 255,498 tons, as against 247,040 in 1935.

Roads.—Communication by road to the harbour is excellent.

Canals.—The Lake to Harbour canal affords direct water transport between stores and mills situated on the lakeside and the harbour. It is navigable by fully loaded 40-ton harbour barges and to some extent relieves the congestion on roads. This canal, together with the lock basin and locks and the water area of the Beira Lake including the San Sebastian canal locks, is now included in the limits of the port of Colombo.

The total number of lighters, launches, &c., which passed through the Lake to Harbour canal during the year was 7,720, against 7,504 in 1935 and 10,218 in 1934.

Lakeside Facilities.

The development of the Lakeside Barge Yards, comprising the portion of land bordering on the Beira Lake, has opened up for commercial purposes a valuable stretch of land on the water front of the lake, and has relieved the congestion in the harbour by affording facilities for the reception of a number of boats which had hitherto been moored in the harbour. There is every indication, that, when trade improves, there will be an increasing demand for land on the lakeside which by its propinquity to the harbour and easy access thereto, both by land and water, affords a valuable venue for commercial purposes.

The Beira Lake is now an integral part of the port, and its progressive development will eventually lead to the establishment of a Commercial Zone in the vicinity of the port serving as a feeder to the business of the port and fostering its development.

Passenger Jetty.—The baggage office has good accommodation and examination halls. There is a staff always on duty day and night, and baggage landed with passengers is passed without delay. There is also provision for the storage of such baggage as a passenger may wish to leave in the premises, a small storage rent being payable. Accommodation is also provided at the Custom house at the Passenger Jetty for a Railway Booking Enquiry Office and a Post Office. The Passenger Traffic during the year shows a decrease, the total number being 174,371, against 263,574 in the preceding year.

Landing and Shipping.—Landing and shipping of cargo is assisted by an efficient crane service. There is a total quayage of 15,657 lineal feet. The following are the particulars of cranes available at the port :—

Electric cranes	..	14	Hand derrick ..	..	1
Steam cranes ..	..	22	Steam derrick ..	..	1
Hand cranes ..	..	13	Mobile crane ..	..	1
Elephant hand crane	..	1	Steam jib crane	..	1
Floating cranes	..	2	Steam block loading titan	..	1

operating on the jetties and quays. The largest lift which can be made is 35 tons. The conveyance of cargo from the vessel to the wharf is done by lighters and is carried out by recognized stevedores and landing companies.

Cargo for shipment is brought down to the warehouse by cart, lorry, train, or barge. The Port Commission railway runs direct into the premises alongside three of the export warehouses. With regard to shipment, the same considerations apply as in the case of imports, some firms finding it more convenient to employ a clearing or shipping agency than to maintain their own staff. As in the case of import cargo, goods remain in the Government warehouse at the risk of the exporter. To suit the convenience of shippers who do not carry out their own shipments, landing and shipping companies are prepared to take over cargo at the shipper's stores for removal to the warehouse in the Company's own lorries. Export harbour dues are payable on all goods sent down to the warehouses or wharf. If they lie there for more than three clear days, further dues are payable for each day, and in addition a similar sum by way of warehouse rent. Cargo is taken to the vessel by means of lighters. A good supply of labour is available.

Warehouse Accommodation.—As goods discharged are not always directly transferred to some other means of conveyance, it has been

Copyright Photograph *Lionel Wendt.*

VILLAGE BOYS.

found necessary to provide extensive warehouse accommodation for the increasing volume of goods demanding storage, pending shipment or removal from the premises. There is a total warehouse floor area of 568,786 square feet in the port for dealing with imports, exports, and transhipment cargo. Most of the warehouses have railway facilities and cranes are available where required.

The import warehouses are situated between the root of the South-west Breakwater and the Lake to Harbour canal. Other import warehouses and landing areas are also situated on either side of the canal, and these are largely used for the landing of rough cargo, such as timber and metal. Further north, three recently built warehouses are available at Kochchikade, where facilities are provided for transport by rail.

Five commodious warehouses are allotted for the accommodation of export cargo, in addition to an open shed used for the shipment of drums containing coconut oil and similar commodities, and another shed for rough cargo. The largest warehouse can accommodate 4,000 tons of tea packed in chests of the usual size. The other four warehouses can each accommodate from 2,500 to 3,000 tons.

There are several bonded warehouses within the Customs premises, and certain firms have their own bonded warehouses outside the premises. Goods may be bonded for any period up to two years, after which they must either be removed or rebonded. All goods placed in bond are liable to the same rent and harbour dues as in the case of import cargo up to the time of bonding, after which no further dues are payable and bonded warehouse rent is recovered, the amount payable per week on bonded goods being the same as the charge per day on import cargo. No rent is payable to the Customs in the case of goods which lie in bonded warehouses belonging to private firms, though a charge is made for Customs supervision of deposits and removals.

Several firms have their own warehouses and stores on the lakeside, which have direct access from the harbour through the canal and locks. Special facilities are given by the Customs for import cargo to be removed direct to these stores and, conversely, for the direct shipment of export cargo from these stores to the vessel. Rent and dues are, however, payable as in the case of goods landed in the warehouse, but the advantage of this direct traffic lies in obviating two additional handlings which would be necessary had the goods been landed or shipped from a quay.

Transhipment warehouses are available for the accommodation of cargo pending transmission to the destination. No import duty is payable upon such cargo, and rent and harbour dues are payable at a reduced rate, amounting to 1/5th of the rate payable upon ordinary import cargo. In the case of direct transhipment from vessel to vessel, a small fee is payable for Customs supervision. The volume of transhipment is fairly large, the quantity transhipped during the year being about 62,479 tons, but there is a steady traffic with Tuticorin and other South Indian ports of transhipment of cargo to and from the United Kingdom, America, Australia, the Far East, &c.

Removal of Cargo.—Goods may be cleared either by the importer himself or by any landing company or recognized clearing agency. Firms who import on a large scale find it convenient to keep their own staff of wharf clerks for the clearing of cargo and the passing of the necessary entries through the Customs. On the other hand firms whose

business is not so great as to justify the maintenance of such a staff, find it more convenient to clear their goods through a Landing Company, or a Clearing Agency.

Warehouse rent and harbour dues are payable upon all goods landed at the wharf, and three clear days are allowed for the removal of the goods, exclusive of Customs holidays, of which there are five in the year, and Sundays. On goods removed after the expiry of this period further rent and dues are payable in respect of each day inclusive of Sundays and Customs holidays. Special facilities are offered by the Customs for clearing goods prior to the passing of the entry and the payment of the duty, rent, and dues. The usual system is to place a cash deposit with the Customs, against which goods are removed after any examination found necessary, the importer guaranteeing to pass the necessary papers within a reasonable period. Special facilities are also given for the clearing of perishable goods and of consignments, such as rice and sugar, which are landed in large quantities at a time.

Coaling Facilities.—There are about 29 acres of land on the foreshore of the harbour, half of which is leased to different companies for the stacking of coal. The coaling grounds between the Barge Repairing Basin and the Graving Dock have 17 coaling jetties. Large supplies of coal can be procured, and steamers are bunkered with good despatch at any hour of the day or night.

The types and approximate prices of coal stocked at Colombo for commercial purposes are as follows (December, 1936) :—

Type.	Price Trimmed (f. o. b.) Per Ton s.	d.
Welsh coal (Admiralty quality)	44	6
Natal coal	26	6
Indian coal	25	0

The quantities of coal imported and issued for bunkers during the years 1935 and 1936 were as follows :—

	1935. Tons.	1936. Tons.
Imports	436,948 ..	405,537
Bunkers	238,276 ..	225,206

Oil Facilities.—The port is equipped with an up-to-date oil fuel installation which provides for the rapid bunkering of ships using oil fuel. The main Oil Installation Depôt, about 92 acres in extent, is situated at Kolonnawa, about 3½ miles from the harbour front, and various oil companies have erected their own storage and distribution tanks there. This depôt is divided into a non-dangerous and a dangerous oil section and is separated by a safety reservation. Three main pipelines are laid connecting the discharge berth in the harbour with the main oil depôt, two for oil fuel and the other for kerosene and petrol. In connection with the bunkering of vessels, a measuring tanks depôt, about 19 acres in extent, has been established at Bloemendahl, about ¾ of a mile from the harbour front, and branch pipelines are provided from Kolonnawa to Bloemendahl and from Bloemendahl to the bunkering berths, The oil depôt is also connected to the main railway system of the Island. Three reinforced concrete jetties, two for bunkering purposes and one for discharge of oil tankers, have been provided. The outer oil bunkering jetty is capable of accommodating vessels of 500 feet length and 27 feet draught. The inner bunkering jetty is used by barges for bunkering.

Vessels of 500 feet length and 27 feet draught can be berthed at the discharge jetty where the latest facilities for discharging oil ships are provided, and vessels of deeper draught up to 29 feet are accommodated at the Graving Dock Guide Pier.

The imports of oil during the last two years were as follows :—

	1935. Tons.	1936. Tons.
Liquid fuel	317,198 ..	300,453
Kerosene oil	25,833 ..	23,639
Petrol and benzine	32,520 ..	33,202
Total ..	375,551	357,294

The quantities of liquid fuel issued for bunkers during the last two years were as follows :—

	No. of Ships Bunkered.	Tons.
1935	520 ..	272,721
1936	513 ..	254,390

There has been a decrease in the number of oil burning vessels calling at the port, while those burning coal have increased.

The Oil Facilities receipts during the year 1936 were Rs. 930,297·60, as compared with Rs. 997,590·25 in 1935.

Graving Dock.—Length of floor, 700 feet ; breadth of entrance-cope level, 85 feet ; depth over sill at low water, 30 feet ; depth over sill at high water, 32 feet. Docking can be carried out by day or night. An Inner Graving Dock, 350 feet long and 54 feet wide with a depth of 20 feet "at sill", is being constructed. This is an extension of the existing Graving Dock.

Patent Slip.—Length, 800 feet ; length of cradle, 220 feet ; breadth of cradle, 40 feet ; depth over keel blocks at lower end at low water, 21 feet 6 inches ; depth over keel blocks at upper end at low water, 10 feet 6 inches ; inclination 1 in 20. Capable of slipping a vessel of 1,200 tons dead weight.

Ambulance Facilities.—An ambulance launch is available for the conveyance of sick and injured persons between ship and shore. The Colombo Municipal Council provides an adequate and efficient motor ambulance service for the port.

Quarantine.—On entering the harbour each ship is visited by the Port Surgeon or his Assistant, and no person is allowed to board the ship or leave the ship till pratique is granted. If there are cases of infectious diseases on board, such as plague, cholera, smallpox, yellow fever, or typhus, the ship is held in strict quarantine until all necessary measures, such as removal of the sick person, disinfection of the ship, vaccination, &c., as the case may be, are carried out. Thereafter the ship is allowed to be worked in restricted quarantine, any persons having business on board being allowed on special permits.

Port Commission.—The Colombo Port Commission is composed of the following :—The Principal Collector of Customs (who is Chairman or Chief Port Commissioner) ; the Director of Medical and Sanitary Services ; the General Manager of the Railway ; the Chairman, Municipal Council, and Mayor of Colombo ; the Deputy Collector of Customs ; the Master Attendant, Colombo and Galle ; the Harbour Engineer ; six Unofficial

Members nominated by the Chamber of Commerce to represent Import, Export, Shipping, Coaling, Oil, and Landing Agencies' Interests; two Unofficial Members nominated by His Excellency the Governor to represent Ceylonese interests.

RAILWAYS.

All the railways in Ceylon are State-owned and Government-controlled, the management being vested in the Ceylon Government Railway Department.

The total length of line open is 951 miles, of which 834 miles are broad gauge (5½ feet gauge) and 117 miles narrow gauge (2½ feet gauge).

The frontispiece map shows how the different lines radiate from Colombo.

The following table shows the distance from Colombo Fort to the more important stations on the different lines, with the first class return passenger fare and the approximate time of journey :—

Col. Fort. To—	Distance. M. C.	Train Fare (Return). Rs. c.	Approx. Time of Journey. Hours.	Col. Fort. To—	Distance. M. C.	Train Fare (Return). Rs. c.	Approx. Time of Journey. Hours.
Peradeniya	71 62	8 65	3¼*	Polonnaruwa	162 1	19 55	8½*
Kandy	75 12	9 10	3½*	Batticaloa	217 78	26 15	12

The main results of the working of the Ceylon Government Railway for the financial years 1931–32 to 1935–36 are shown in the following table :—

Particulars.	1931–32. Rs.	1932–33. Rs.	1933–34. Rs.	1934–35. Rs.	1935–36. Rs.
Total capital outlay	225,307,864	226,379,400	227,005,002	227,500,606	227,804,742
Gross earnings	22,024,355	19,711,602†	20,980,422	18,273,081	16,749,221
Total working expenses‡	21,688,864	19,319,240	18,943,156	18,911,326	19,587,815
Net revenue§	335,491	392,362	2,037,266	Loss 638,245	Loss 2,838,594
Percentage of net revenue on total capital outlay	·15 p.c.	·17 p.c.	·90 p.c.	—	—
	Rs.	Rs.	Rs.	Rs.	Rs.
Gross receipts from ordinary passenger and season tickets	8,378,370	7,539,419	7,941,378	6,547,579	5,917,331
Gross receipts from parcels, goods, &c.	13,645,985	12,172,183	13,039,044	11,725,502	10,831,890
Free traffic (excluding that for Railway Department included in gross receipts)	Nil	Nil	Nil	Nil	Nil

The number of passengers conveyed has decreased by 810,323, the total conveyed during the year being 9,406,977. Under Season Tickets the number of ticket holders has fallen off by 6,712, the total number of season tickets issued during the year being 160,649.

* By express trains.
† Includes (Rs. 8,089) % Temporary levy on salaries.
‡ Includes provision for renewals.
§ That is," Gross earnings " less " Total, working expenses".

The number of parcels conveyed during the year was 1,127,219 or a decrease of 89,702.

The tonnage of goods carried was 895,238 or a decrease of 93,246 tons, the noticeable increases and decreases being :—

	Increase. Tons.	Decrease. Tons.
Agricultural produce	2,452	—
Cacao	—	881
Coconut produce (other than copra)	—	11,698
Copra	—	10,268
Manure	16,492	—
Petrol	1,622	—
Rice	—	26,470
Rubber	—	5,368
Salt	4,759	—
Sundry goods	—	1,741
Tea	517	—
Foreign Traffic	1,086	—
Special Train Traffic	—	62,984

Passenger Fares.

The standard passenger fares are as follows :—

	Single Journey.			Return Journey.		
	First Class. Cents.	Second Class. Cents.	Third Class. Cents.	First Class. Cents.	Second Class. Cents.	Third Class. Cents.
All lines above Nawalapitiya	10½	7	2½	18	12	4
All lines below Nawalapitiya	7	4⅔	2½	12	8	4

Week-end tickets are issued between all stations distance 25 miles and over at single fare and a half for the double journey. Reductions are made for children, pioneers, and labourers of any nationality, and for periodical tickets.

Sleeping Cars.

The sleeping cars which run on the Up and Down night mail trains between Colombo, Kandy, and Bandarawela and Colombo-Kankesanturai are provided with sleeping accommodation. Each berth is numbered and provided with bedding and an attendant accompanies each car, The charge for a sleeping berth is Rs. 5 in addition to the ordinary first-class fare to the station to which the journey is made.

In the Indo-Ceylon mail trains sleeping berths without bedding are provided for through first-class passengers without any extra charge, but berths are not guaranteed unless they have been reserved, for which a registration fee of Re. 1 per berth will be charged. If bedding is required Rs. 5 must be paid for each set of bedding at the time of booking, and a berth will be made up as a bed by the Car Attendant. In such cases no registration fee will be charged.

Sleeping berths without bedding are provided for second class passengers on the Colombo-Kankesanturai Up and Down night mail trains at Rs. 2·50 each and on the Colombo-Talaimannar Pier Up and Down night mail trains at Re. ½ each for through Indo-Ceylon passengers.

Return sleeping berth tickets at Rs. 6 each first class, and Rs. 3 each second class are being issued as a trial to holders of week-end, ordinary return, and excursion tickets.

Restaurant Cars.

These are attached to the important trains on the Main and Northern lines.

Restaurant Rooms.

These are provided at Maradana, Polgahawela, and Nanu-oya on the Main line, Colombo Fort and Alutgama on the Coast line, and Anuradhapura on the Northern line. Refreshments at these places are supplied at moderate prices.

Refreshment Baskets.

Refreshment baskets can be supplied for any train from Colombo on giving 20 minutes' notice to the Manager, Restaurant Cars and Rooms, at his office at Colombo Fort Station.

Luggage.

Each adult passenger is allowed, free of charge, the following weight of luggage :—

	lb.		lb.
First class ..	112	Third class ..	56
Second class ..	84		

A free allowance of half these quantities is made for each child travelling with a half-ticket. No luggage will be conveyed free for children under three years of age who travel free.

ROADS.

There are over 16,500 miles of roads and cart tracks in the Island controlled and administered by the following authorities :—

Authority.	Description of Roads.	Approximate Mileage.
(i.) Public Works Department ..	All main thoroughfares in the Island ..	4,806
(ii.) District Road Committees ..	All minor roads within the areas of jurisdiction of each committee ..	3,000
(iii.) Local Governing Authorities, viz., Municipalities, Urban District Councils, Local Boards, Sanitary Boards, &c. ..	All streets within their respective jurisdictions	565
(iv.) Village Committees	All natural cart tracks within the jurisdiction of each Committee ..	7,800
(v.) Irrigation Department	— ..	70
(vi.) Private parties	— ..	350

In addition there are approximately 8,200 miles of bridle paths in the charge of the District and Village Committees.

The Public Works Department is the principal road authority in the Island and is responsible for the construction and maintenance of all the "Main roads", by which are meant through arteries connecting the principal centres of populations with one another and with the railways and ports.

The whole cost of construction, improvements, and maintenance of these roads is met from the general revenue of the Island.

The roads vary in standard from narrow country roads to wide modern thoroughfares, the standard depending on the nature of the country traversed and the traffic carried.

The following is the classification of the Public Works Department roads according to the nature of their surfaces :—

	Miles.
Full-metalled	4,043
Track-metalled	277
Gravelled	362
Natural	124
	4,806

The metalled roads are maintained in good order, and, with but few exceptions, may be considered passable to all classes of traffic. Gravelled roads can be considered as dry weather roads only ; in dry weather they are generally in fair order, but they cannot be relied upon to the extent of metalled roads. A large mileage of the metalled roads is tarred or otherwise surface-treated. At the end of 1936 the length of roads so treated was 3,925 miles.

The only direct charge on road users is that for the use of ferry boats, but on the main roads with few exceptions the ferries have been replaced by bridges. Indirect charges are made in the form of import duties and taxes on wheeled vehicles.

The distribution of the main roads, distances between the principal centres, &c., can be ascertained on reference to the motor map of Ceylon, obtainable from the Surveyor-General, Colombo.

The distances from Colombo to other chief towns by road (given to the nearest half mile) are shown in the following list :—

Colombo to—	Miles.	Colombo to—	Miles.
Galle	72½	Batticaloa (*via* Badulla) ..	241
Peradeniya	68	Anuradhapura (*via* Matale) ..	158½
Kandy	72	Trincomalee (*via* Kurunegala)..	169
Nuwara Eliya (*via* Peradeniya)	112	Anuradhapura (*via* Puttalam)..	129
Nuwara Eliya (*via* Ginigathena)	106½	Jaffna (*via* Puttalam) ..	250

MEANS OF TRANSPORT BY ROAD.

The number of motor vehicles in Ceylon on December 31, 1930, was 24,405 ; it decreased during the years of depression to 23,359 on December 31, 1933. Owing to the revival of trade generally throughout the Island since 1934 there has been a steady increase in the number of motor vehicles. On December 31, 1936, there were 28,623 motor vehicles in the Island.

The average cost of running a small private car may be put at about 25 to 40 cents per mile. Hiring cars are available in most parts of the Island and cost 40 cents to Re. 1 per mile.

Drivers and mechanics for privately-owned cars can be obtained without difficulty and all drivers must hold the Government Certificate of Competence, while many are registered with the Automobile Association of Ceylon. Numerous facilities for repairs exist in Colombo, Kandy, Nuwara Eliya, and most of the other towns. Supplies of petrol and oil are available in all towns and in most of the larger villages.

The Automobile Association of Ceylon is affiliated or has reciprocal agreements with most of the Automobile Associations and Clubs in other countries and the Secretary (P. O. Box 338, Colombo) will afford any information which may be desired. The various landing, Customs, and registration formalities can be arranged for visitors by the Association. Facilities afforded by the International Convention relative to motor traffic are now available to Ceylon and a Ceylon TRIPTYQUE for

Customs purposes is available through the leading Automobile Institutions overseas. International Driving Permits, International Certificates of registration for Motor Vehicles, and Fiscal Permits are valid in Ceylon.

Motor Omnibuses.—There is a plentiful supply of motor omnibuses, known in England as road service vehicles, carrying passengers for hire and running on nearly every main road in the Island. The number of omnibuses in use during the year was 2,546. Greater control with regard to the routes served, the condition of the omnibuses plying on the roads, and the standard of drivers and conductors is desirable. These matters are already receiving the special attention of the authorities concerned. The Transport Commission appointed by the Secretary of State may probably have something to say in this connection.

The seating accommodation for passengers in motor omnibuses varies from 8 to 37.

Personal luggage of small dimensions and light weight is carried free of charge. Extra luggage is carried only if there is room in the conveyance on payment of a fee.

Goods.—The chief means of transport of goods by road are the local bullock cart and the motor lorry. A double-bullock cart is capable of taking 1½ tons at a time, and travels at the average rate of about 2 miles an hour. The cost per ton per mile may be put at about 80 cents. In the year 1934 there were about 22,424 single- and double-bullock carts in Ceylon, the majority of which are used in the transportation of village produce (exact figures for 1936 are not available). Motor lorries are slowly but surely replacing bullock carts in the movement of estate goods and in other industries. These vary in load capacity from 5 cwt. to 5½ tons and travel at a speed of about 15 to 20 miles per hour, 15 miles being the legal speed limit for heavy lorries. They run mostly on petrol, a fair number on steam or kerosene, a few but increasing number on crude oil, and a very few on charcoal. In 1936 there were 3,886 motor lorries and vans in Ceylon. Experience has shown that the running costs can be kept at as low as 50 cents per ton per mile. The Diesel oil engine has been gaining in popularity. The number of Diesel vehicles in Ceylon on December 31, 1936, was 229, as against 149 on December 31, 1935. As Diesel vehicles are run on crude oil which is imported free of duty the following scale of special tax on transport vehicles using uncustomed oil is being imposed with effect from January 1, 1936, in order to recoup the resultant loss of revenue by way of import duty on petrol :—

	Monthly Rate. Rs.	c.
Where the tare of the heavy oil motor vehicle—		
(*a*) does not exceed 1 ton	55	0
(*b*) exceeds 1 ton but does not exceed 1½ tons	60	0
(*c*) ,, 1½ ,, ,, 2 ,, ...	65	0
(*d*) ,, 2 ,, ,, 2½ ,, ...	70	0
(*e*) ,, 2½ ,, ,, 3 ,, ...	75	0
(*f*) ,, 3 ,, ,, 3½ ,, ...	80	0
(*g*) ,, 3½ ,, ,, 4 ,, ...	90	0
(*h*) ,, 4 ,, ,, 4½ ,, ...	100	0
(*i*) ,, 4½ ,, ,, 5 ,, ...	110	0
(*j*) ,, 5 ,, ...	120	0

Tramways.—The only street tramways in Ceylon are those in the town of Colombo, the total length of double track being 7 miles. There are two nearly equal routes : one between the Fort and the Kelani river terminus, and one between the Fort and Borella, joined by a cross line

between Maradana and Grandpass *via* Skinner's road and Armour street. The total number of passengers carried annually is estimated at about 13 millions.

CANALS.

The only artificial navigable waterways in Ceylon are a series of canals connecting a chain of lakes on the west coast—Bolgoda, Colombo, Negombo, Chilaw, Mundel, and Puttalam lakes—as also the estuaries of the Kalu-ganga, Kelani-ganga, Maha-oya, and Deduru-oya ; thus forming a continuous water-way from Kalutara in the south to Puttalam in the north, a distance of approximately 120 miles. These were maintained in good order.

In addition to the foregoing there are about 41 miles of boat channel maintained by dredging the Jaffna lagoon.

POSTAL, TELEGRAPH, AND TELEPHONE SERVICE.

(Full information on this subject is to be found in the "Ceylon Post Office Guide", obtainable from the Postmaster-General, Colombo, price 75 cents.)

On December 31, 1936, 902 offices were opened for business. Details of the facilities afforded are as follows :—

168 Post Offices (excluding the Central Telegraph Office which does only telegraph business) dealt with all classes of postal business, viz., mail and parcel work, registration and insurance of postal articles, money order, postal order, and Savings Bank work, and telegraph and telephone business. Fifty-seven Post Offices dealt with all classes of business except telephone work. One Post Office conducted all classes of business except postal order, value-payable and cash-on-delivery work and telephone work. Nine Post Offices dealt with all classes of postal business except telegraph and telephone work.

Forty-six Sub-Post Offices conducted all classes of postal business, except insurance, and also provided telephone-telegraph facilities. 129 Sub-Post Offices also conducted such business except telephone-telegraph work.

455 Village Receiving Offices dealt with mail work only. At 37 Railway Stations facilities for the despatch and receipt of Inland postal telegrams were available. At 12 of these stations, mail work was also conducted.

There are 10,351 miles of telegraph wire (including railway telegraph wires), of which 2,728 are laid underground, and 51,836 miles of telephone wire (including Trunk and Junction lines) for subscribers' circuits, of which 37,233 are laid under ground (excluding private estate lines).

Mail Services.

A regular weekly mail service is maintained between Ceylon and the United Kingdom and the continent of Europe and between Ceylon and Australia. Regular and frequent services are also available to the Straits Settlements and the Far East. Mails from Colombo to Mauritius *via* Batavia are despatched fortnightly. Direct mail to Mauritius is

also sent at very irregular intervals. There is also a direct service not less than twice a month between Ceylon and South Africa. Mails from Ceylon to East Africa are despatched fortnightly *via* Bombay and direct twice a month. The mail service by train is maintained daily between Ceylon and India *via* Talaimannar.

Air Mails.—There are two despatches a week of air mail articles from Colombo to connect with the bi-weekly despatch from Karachi westwards. These two despatches are forwarded by rail to Madras, and from thence, by the combined Indian Internal and Imperial Airways Services, the countries served by these services being the United Kingdom, countries in Europe, Egypt, and North Africa, South and East Africa, Canada and the United States of America. Correspondence intended for conveyance by the Internal Air Services of certain countries (viz., United States, Dutch East Indies, and Australia) are also despatched weekly. Air mails for Australia are forwarded weekly *via* Singapore to connect there with the air service to Australia.

Indian mails are carried generally by the Ceylon Government Railway and from railway stations by private contract motor mail services, bullock coach, or runner services.

Rates of Postage.

Inland Rates and Rates to India.

	Cents.		Cents.
For letters, per 2 ounces or part of that weight	6	For registered newspapers not weighing more than 2 pounds, for every 8 ounces	2
For post cards, each	3		
For printed matter, per 2 ounces or part of that weight up to a maximum of 2 pounds	2		

Rates to the United Kingdom, British Possessions, and Egypt.

	Cents.		Cents.
For letters, per ounce or part of that weight	9	For printed papers, per 2 ounces or part of that weight	3
For post cards, each ..	6		

Rates to Foreign Countries (excluding Egypt).

	Cents.		Cents.
For letters, for the first ounce ..	20	For post cards, each ..	12
For every additional ounce or part of that weight	10	For printed papers, per 2 ounces or part of that weight	4

Inland Cash-on-Delivery System.

Postal articles can be transmitted by the Inland post on the value-payable system provided that the amount payable is not less than 50 cents or more than Rs. 600. A posting and delivery fee of 5 to 15 cents, according to value, will be levied on every value-payable article.

Foreign Cash-on-Delivery System.

The Cash-on-delivery Service is in operation between Ceylon and the United Kingdom (the Straits Settlements, the Federated Malay States) and Germany.* Details will be found in the " Ceylon Post Office Guide ".

* The outward service with Germany is temporarily suspended.

Air Mail Parcels.

Air mail parcels addressed to any post office in Great Britain or Northern Ireland for despatch by air from Karachi shall be accepted at all post offices which accept foreign parcels. Details in " Post Office Guide " (Ceylon).

Money Orders.

Money Orders can be obtained at any of the Post Offices payable at any of the others and in most foreign countries. The maximum for inland and Indian Money Orders is Rs. 600, for foreign orders £40 except in certain special cases where the maximum is below this amount. The rate of commission for inland Money Orders is 10 cents for each complete sum of Rs. 10 and 10 cents for the remainder, and for Indian Money Orders 20 cents for each complete sum of Rs. 10 and 20 cents for the remainder. The rate for foreign Money Orders expressed in sterling is 25 cents on sums not exceeding £1, and on sums exceeding £1, 15 cents for each complete sum of £1 and 15 cents for the remainder. Money orders payable in the United Kingdom or countries served through the United Kingdom can be despatched by Air Mail on payment of a fee of 15 cents in addition to the ordinary money order commission. Telegraph Money Orders can be despatched in the inland service. Telegraph Money Order service is also available to India and some other foreign countries, a fixed fee of 10 cents irrespective of the amount of the order is charged for inland and Indian Telegraph Money Orders. There are fixed minima for Telegraph Money Orders according to the currency in which the order is advised. Details will be found in the " Ceylon Post Office Guide".

Postal Orders.

Inland Postal Orders for fixed amounts ranging from 50 cents to Rs. 10 are issued, the rate of commission varying from 3 to 10 cents.

British Postal Orders.

There are 40 denominations of British Postal Order, ranging from 6*d*. to 21*s*., the difference between each up to 19*s*. being 6*d*., and 1*s*. between 19*s*. and 21*s*. Commission is charged at the rate of 5 cents on each of the first three denominations, 10 cents on each of the next eighteen, and 15 cents on each of the remaining denominations. A full list of the countries to which British Postal Orders can be sent is given in section IX. of the " Ceylon Post Office Guide ". Broken amounts up to 5*d*. (but not including fractions of a penny) may be made by affixing unused Ceylon postage stamps of equivalent value or British penny postage stamps not exceeding three in number in the spaces provided on the order.

Inland Telegrams.

The minimum charge for Inland ordinary telegrams is 50 cents for the first twelve words, including the address, and 5 cents for each additional two words or less. These telegrams can be sent from any one telegraph office to any other in the Island.

The charge for Urgent telegrams is Re. 1 for the first twelve words, including the address, and 10 cents for each additional two words or less.

Greetings and Condolence telegrams can be sent at reduced rates on such occasions as Christmas, New Year, Wesak, Hindu New Year, Id, Birthdays, Birth of a child, Weddings, and Funerals and Deaths. The text of such a telegram should be a phrase selected from the list of stock phrases appearing at the end of rule 419A of the Ceylon Post Office Guide. The entire text is counted as one word for the purpose of the collection of charges. The charges are 30 cents for each such telegram consisting of not more than six words and 5 cents for each additional word in the name and address of the addressee or of the sender. For fuller details, see the rule already quoted.

Foreign and Colonial Telegrams.

The rates for telegrams to India (including Burma) are express Rs. 2, and ordinary Re. 1 for the first 12 words or less, and 15 cents and 10 cents respectively for each additional word.

Telegrams to places in other British Possessions and foreign countries can be sent on a minimum charge per word varying from 65 cents to Rs. 3·65 for ordinary, and from 45 cents to Re. 1·85 for deferred telegrams, according to the distance of the place of destination, the route by which the telegram is to be sent, &c. A full list of places to which foreign and Colonial telegrams can be sent, together with the rates charged, is given in section 11 of the " Ceylon Post Office Guide ".

Foreign Cheap Rate Telegrams.

Telegrams in plain language are accepted for transmission as " Daily Letter Telegrams " to various places abroad at considerably reduced rates. A list of places to which this service is available, and the scale of charges, will be found in section 11 of the " Ceylon Post Office Guide ".

Radio-Telegrams.

Radio-Telegrams are accepted at any Postal Telegraph Office in Ceylon for transmission to ships equipped with radio-telegraph apparatus through the Coast Station in Colombo.

The charges are as follows :—

	Per Word. Cents.
British, Indian, or Colonial Government telegrams to His Britannic Majesty's Ships of War *via* Colombo radio or *via* Matara Radio ..	Free
Private telegrams to His Britannic Majesty's Ships of War—	
Via Colombo Radio ..	40
Via Matara Radio ..	25

	Per Word. Cents.
All other Government or private telegrams *Via* Colombo Radio only	65
On Radio Telegrams sent to— ..	
(*a*) Spanish and Swedish ships the charge is	60
(*b*) Finnish ships the charge is ..	50

The normal range of the Colombo Radio Station is 500 miles or about two days steaming from or to the port of Colombo, but this distance is considerably exceeded when conditions are favourable and also according to the equipment on board the ships.

With ships fitted with the Short Wave System, communication is possible for a few thousand miles. Ships not so fitted can be reached through those having the facility.

Copyright Photograph *Lionel Wendt.*

APPROACH TO CEYLON AT DAWN.

Telephone System.

Telephone communication exists between most of the principal towns and certain rural districts. The towns are generally served by Government exchanges and the rural districts by Government or private licensed exchanges which are connected to the general trunk system by means of Government junction lines.

The charge for the use of a public call box for six minutes or less is 10 cents, and for the use of the trunk and junction lines for three minutes or less on day calls between 6 A.M. and 6 P.M., and for six minutes or less on night calls between 6 P.M. and 6 A.M., the charge is as follows :—

	Cents.		Cents.
For 15 miles or under.. ..	15	Over 32½ miles and not exceeding 60 miles	50
Over 15 miles and not exceeding 32½ miles	25	Every additional 25 miles or part of a mile	25

The minimum annual rental for a telephone connection to a large town exchange is Rs. 180 for business or professional purposes and Rs. 120 for non-business or residential purposes and for a connection to a small town exchange Rs. 125 and Rs. 90 respectively.

Broadcasting Service.

The Government maintains a regular broadcasting service on a wave-length of 428·5 metres (700 KC) with a transmitter radiating 1·5 K.W. situated in Colombo. Evening programmes are simultaneously broadcast on a shortwave wave-length of 48·7 metres (6,160 Kilocycles).

Programmes consisting of music, talks and news are broadcast in English, Sinhalese, and Tamil. Empire programmes from Daventry are relayed and broadcast almost daily.

The number of radio receiving licences in force at the end of 1936 was 3,873, as against 3,053 at the end of 1935.

There is a regular broadcast to schools conducted by the Department of Education.

CHAPTER XI.

Banking, Currency, Weights and Measures.

BANKS.

The following is a list of banks which have branches in Ceylon :—

Name of Bank	Imperial Bank of India
Address of Head Office ..	Madras
Branch in Ceylon ..	Prince street, Fort, Colombo
Agents in Ceylon ..	—
London Office	25, Old Broad street, London, E.C. 2

Name of Bank	National Bank of India, Ltd.
Address of Head Office ..	26, Bishopsgate, London, E.C. 2
Branches in Ceylon ..	York street, Fort, Colombo ; Ward street, Kandy ; and Nuwara Eliya
Agents in Ceylon ..	Clark, Spence & Co., Galle
Bankers in the United Kingdom	The Bank of England ; The National Provincial Bank, Ltd. ; The National Bank of Scotland, Ltd.

6——J. N. 65863 (6/37)

Name of Bank	Chartered Bank of India, Australia, and China
Address of Head Office ..	38, Bishopsgate, London, E.C. 2
Branch in Ceylon ..	Queen street and Baillie street, Fort, Colombo
Agents in Ceylon ..	Mercantile Bank of India, Ltd., Galle
Bankers in the United Kingdom	The Bank of England ; Midland Bank, Ltd. ; Westminster Bank, Ltd. ; National Provincial Bank, Ltd. ; The National Bank of Scotland, Ltd. ; Lloyds Bank, Ltd.

Name of Bank	Hong Kong and Shanghai Banking Corporation
Address of Head Office ..	1, Queen's road, Hong Kong
Branch in Ceylon ..	24, Prince street, Fort, Colombo
Agents in Ceylon ..	E. Coates & Co. (Galle), Ltd., Galle
Bankers in the United Kingdom	Westminster Bank, Ltd.

Name of Bank	The Mercantile Bank of India, Ltd.
Address of Head Office ..	15, Gracechurch street, London, E.C. 3
Branches in Ceylon ..	16, Queen street, Fort, Colombo ; 97, Queen's Hotel building, Kandy ; and Galle
Agents in Ceylon ..	—
Bankers in the United Kingdom	The Bank of England ; Midland Bank, Ltd.

Name of Bank	The Eastern Bank, Ltd.
Address of Head Office ..	2 and 3, Crosby square, Bishopsgate, London, E.C. 3
Branch in Ceylon ..	Main street, Fort, Colombo
Agents in Ceylon ..	—
Bankers in the United Kingdom	The Bank of England ; Westminster Bank, Ltd. ; The National Provincial Bank, Ltd. ; The Bank of Scotland ; Barclay's Bank, Ltd. ; Martin's Bank, Ltd.

Name of Bank	The P. & O. Banking Corporation, Ltd. (with which is affiliated The Allahabad Bank, Ltd.)
Address of Head Office ..	117-122, Leadenhall street, London, E.C. 3
Branch in Ceylon ..	Victoria Arcade buildings, York street, Fort, Colombo
Agents in Ceylon ..	—
Bankers in the United Kingdom	The Bank of England ; Lloyds Bank, Ltd. ; Westminster Bank, Ltd. ; The National Provincial Bank, Ltd. ; Royal Bank of Scotland
Name of Bankers ..	Thos. Cook & Son (Bankers), Ltd.
Address of Head Office ..	Berkeley street, Piccadilly, London, W. 1
Branch in Ceylon ..	Prince street, Fort, Colombo
Agents in Ceylon ..	—
Bankers in the United Kingdom	The National Provincial Bank, Ltd. ; Barclay's Bank, Ltd. ; Midland Bank, Ltd.

Name of Bank	Indian Bank, Ltd.
Address of Head Office ..	Indian Bank buildings, North Beach road, Madras
Branches in Ceylon ..	Baillie street, Colombo ; Grand Bazaar, Jaffna
Agents in Ceylon ..	None
Bankers in the United Kingdom	None

Name of Bank	The Calicut Bank, Ltd.
Address of Head Office ..	The Calicut Bank, Ltd., Bank road, Calicut, India
Branch in Ceylon ..	15, Baillie street, Fort, Colombo
Agents in Ceylon ..	None
Bankers in the United Kingdom	None

Name of Bank ..	..	The Bank of Chettinad, Ltd.
Address of Head Office	..	The Bank of Chettinad, Ltd., Chettinad, South India
Branch in Ceylon	..	The Bank of Chettinad, Ltd., 256, Sea street, Colombo
Agents in Ceylon	..	No Agency (Manager: M. M. Ramanathan Chettiar)
Bankers in the United Kingdom		None

Name of Bank ..	..	Bank of Uva, Ltd.
Address of Head Office	..	Badulla
Branch in Ceylon	..	—
Agents in Ceylon	..	Colombo Commercial Co., Ltd., Colombo
Bankers in the United Kingdom		—

Banking Agencies.

Name of Bank.			Agents in Ceylon.
Coutts & Co.	..	..	George Steuart & Co., Colombo
Ulster Bank, Ltd., Belfast	..	..	do.
Westminster Bank, Ltd.	..	..	do.
Bank of Montreal	..	..	do.
Charles Hoare & Co.	..	..	do.
Martin's Bank, Ltd.	..	..	do.
National Provincial Bank, Ltd.		..	do.

Savings Banks.

There are two Savings Banks, viz., the Ceylon Savings Bank and the Post Office Savings Bank.

The Ceylon Savings Bank is a Government institution established in 1832. Accounts may be opened with a minimum deposit of 50 cents, and not more than Rs. 2,000 can be deposited in one year irrespective of withdrawals. The maximum sum which a depositor may have to his or her credit is Rs. 6,000. Charitable institutions or societies may deposit Rs. 3,000 per annum up to a maximum of Rs. 9,000. The Bank allows interest at the rate of 3 per cent.

The Post Office Savings Bank is managed by the Post and Telegraph Department. Deposits and withdrawals can be made at any of the Post Offices in the Island. The first deposit is 50 cents and the minimum amount that can be deposited thereafter is 25 cents, and the maximum per annum is Rs. 750 irrespective of withdrawals. The total amount which a depositor may have to his or her credit is Rs. 3,000. The rate of interest allowed is 2·4 per cent.—2 cents per month for each complete sum of Rs. 10.

Co-operative Societies.

There were, on April 30, 1936, 1,008 registered Co-operative Societies in Ceylon, of which 3 were Co-operative Central Banks, 847 Village Credit Societies or Banks of Unlimited Liability, 27 societies of Limited Liability, 71 Thrift Societies, 33 Supervising Unions, 20 Supply Societies, 1 Co-operative Land Mortgage Bank, 2 Sale Societies, 1 Co-operative

Motor Boat Society, 1 Milk Supply Society, 1 Health Society, and 1 Sports Society. These societies had 39,055 members.

Statistics are compiled only at the end of the co-operative working year on April 30. Since then the following societies were registered :—

Unlimited Credit	..	34	Desiccated Coconut—		
Thrift ..	..	11	Millers' Trading Society	..	1
Limited Credit	..	2			
Labour ..	..	5			60
Stores ..	..	7			

Working Capital on April 30 was Rs. 3,236,690.

Loans are still made directly by Government to societies in the less developed portions of the Island, but this system is being gradually replaced by independent Central Banks as the movement develops.

Percentage of overdues was 22 per cent. for the Western Division, 11 per cent. for the Central Division, and 11·3 per cent. for the Northern Division.

A new Co-operative Ordinance was passed in December, 1936, as No. 16 of 1936. New by-laws of a purer Raifeissen type have been adopted by credit societies of unlimited liability.

A supervision and Audit Fund has been created for the Sinhalese provinces by means of which societies are able to make a contribution towards the work of their own supervision.

Five labour societies have been organized in an attempt to find work on estates for Sinhalese villagers who need further employment. Further organizations are held in suspense pending the report of the Immigration Commission.

A co-operative dispensary has been opened in the Tholpuram-Moolai area and is doing very well.

A Banking Union has been successfully formed in the Galle Gangaboda pattu area.

The department is indebted to the Director of Agriculture for instructions given by his officers to the officers of this department and for assistance in obtaining closer co-operation between the Inspectors of his department and this during the year.

CURRENCY, &c.

The monetary unit in Ceylon is the Indian silver rupee, which is divided into 100 cents. The following fractions of the rupee are coined :— (1) Silver, 50-cent piece ; 25-cent piece ; and 10-cent piece ; (2) nickel 5-cent piece ; (3) copper, 1-cent piece and ½-cent piece.

The chief medium of exchange in Ceylon is the currency notes issued by the Government of Ceylon. They are of the following values :— Rs. 1,000, Rs. 500, Rs. 100, Rs. 50, Rs. 10, Rs. 5, Rs. 2, and Re. 1. The present value of the rupee is about 1*s.* 6*d.*

WEIGHTS AND MEASURES.

The standard weights and measures are the English units. In conjunction with these many local weights and measures are used.

CHAPTER XII.

Public Works.

WITH the introduction in July, 1931, of the new Constitution for the Island under the Ceylon (State Council) Order in Council, 1931, the Public Works Department is placed under the immediate control of the Executive Committee of Communications and Works.

There was an increase in expenditure in 1936 on that of the previous years. The total expenditure by the department amounted to Rs. 10,084,041, as against Rs. 8,260,407 during the previous year (1934-35) and Rs. 26,832,348 seven years ago (1928-29).

Maintenance.—The roads, bridges, canals, and public buildings in charge of the department were maintained in satisfactory condition having regard to the restricted funds available.

New Works.—The following are the more important works completed or in progress during the year :—

NEW BUILDINGS AND ADDITIONS AND IMPROVEMENTS TO BUILDINGS.

Quarters for 40 married Sergeants and Constables (4 Storey Block), Colombo.
Industrial School at Maradana.
Bacteriological Institute, Colombo.
New Nurses' Home, General Hospital, Colombo.
Additional Class Rooms to Government Training College, Colombo.
Extensions to Ceylon University College.
Quarters for Nurses and Pupil Midwives, De Soysa Lying-in Home, Colombo.
Improvements to Government Technical College.
Reconditioning Queen's House, Colombo.
Extensions to Out-patients' Department, General Hospital, Colombo.
Extension to Labour Room, De Soysa Lying-in Home, Colombo.
New Garages, Queen's House, Colombo.
Extensions to Ceylon Technical College.
New Breakfast Room, Government Printing Office, Colombo.
Block of 12 rooms for Paying Patients, Angoda Lunatic Asylum.
Extensions to Nurses' Quarters, Lunatic Asylum, Angoda.
Additions to C. D. F. Buildings, Slave Island, Colombo.
Additions and Improvements to C. G. A., Headquarters.
Improved Lavatory Accommodation for Government Stores.
Improvements to Government Analyst's Department, Colombo.
Store Accommodation, Welikada Prison.
Seven Kitchens, Kotahena Police Station.
Extensions to Surveyor-General's Office, Colombo.
Drill Hall and Headquarters, C. P. R. C., Colombo.
Additions to Government Dairy, Colombo.
Improvements to Welikada Prison, Colombo.
Improvements to Hulftsdorp Prison, Colombo.
Two additional temporary wards of 50 beds each, Leper Asylum, Hendala.
Second Stage of Extensions, De Soysa Lying-in Home, Colombo.

Additions and Improvements to Mahara Prison.
Additions to Mahara Prison comprising quarters for 20 Guards and Overseers.
Ward of 40 beds, Ragama Anti-Tuberculosis Hospital.
Children's Ward, Kandana Sanatorium.
Maternity Ward, Negombo Hospital.
Water Supply, Gampaha Hospital.
Quarters for 5 Sergeants and Constables, Police Station, Panadure.
Acquisition of Excise Warehouse, Kandy.
Bungalow for Manager, Experiment Station, Peradeniya.
Dairy Farm, Polonnaruwa.
Additions and Improvements to Experiment Station, Peradeniya.
Water Service, King's Pavilion, Kandy.
Quarters for Matron and Nurse, Teldeniya Hospital.
Additional Requirements, Dairy Farm, Polonnaruwa.
Improvements to Kandy Remand Prison.
Improvements to Bogambara Prison.
Renewal of roof of bungalow of Economic Botanist, Kandy.
Renewal of roof of Divisional Agricultural Officer's Bungalow, Peradeniya.
Repairs to roof of Military Quarters Nos. 19 and 20, Brownrigg street, Kandy.
Water Supply, Alutnuwara Hospital.
Special Repairs, Alutnuwara Hospital.
Labourers' Lines on 4th mile, Norton-Luccombe road.
Maternity Ward, Nawalapitiya Hospital.
Improvements to Pussellawa Hospital Water Supply.
Acquisition of site for quarters for Staff Officers, Galle.
Acquisition of land for Balapitiya Hospital.
New Female Ward of 18 beds, Walasmulla, Hospital.
Accommodation for an X'Ray apparatus, Galle Hospital.
Extensions to Operating Theatre, Galle Hospital.
Additions to Hambantota Kachcheri.
Additions and Improvements to Fiscal's lock-up, Hambantota.
Additions to Central Agricultural Station, Labuduwa, Galle.
Water Supply, Matara Hospital.
Renewal of roof at the Mahamodera Hospital, Galle.
Renewal of roof at the Residency, Galle.
Renewal of roof at the Outdoor Dispensary, Galle.
Special repairs to roof of Divisional Agricultural Officer's quarters, Central Agricultural Station, Labuduwa, Galle.
Circuit Bungalow, Kilinochchi.
Quarters for two Telegraph Linesmen at Vavuniya.
New Crane, Kankesanturai Customs.
New Crane, Jaffna Customs.
Repairs to Excise Station and quarters, Elephant Pass.
Extensions to Warehouse Officer's quarters, Vavuniya.
Paddy Store, Paranthan.
Additional Ward, Delft Hospital.
Maternity Ward, Chavakachcheri Hospital.
Additional Storey to Religious Sisters' quarters, Mantivu.
Acquisition of land, Trincomalee Hospital.
Special repairs to Police Station, Trincomalee.
Extensions to Trincomalee Hospital.

New Police Court, Dandagamuwa.
Quarters for two Telegraph Linesmen, Maho.
Water Supplies to Hospitals at Puttalam, Dandagamuwa, and Ridigama.
Improvements to Clerks' quarters, Chilaw.
Record Presses, Chilaw Police Court.
Additions to Assistant Veterinary Surgeon's bungalow, Bandarawela.
Three additional married quarters, Bandarawela Police Station.
Improvements to Water Supply, Buttala Hospital.
Water Supply, Madulsima Hospital.
Special repairs to Provincial Engineer's bungalow, Badulla.
Temporary Maternity Ward of 10 beds, Female Hospital, Ratnapura.
Additions to Government Farm, Ambepussa.
Extensions to Nurses' quarters and Administration Block, Kegalla Hospital.
Temporary Water Supply, Kegalla Hospital.

BRIDGES.

Maguru-ganga bridge consisting of a span of 30 feet with 12 feet roadway.
Palliawatta bridge on 1st mile, Hamilton canal.
Reconstruction of bridge No. 26/2, Minuwangoda-Henaratgoda road.
Angulana bridge consisting of 40 feet span with 14 feet roadway.
Pamankade bridge—widening of and spans.
Victoria bridge—resurfacing.
Temporary bridge consisting of 9 spans of 14 feet with 12 feet concrete roadway on 17th mile, Colombo-Kandy road.
Improvements to platform, Giriulla bridge.
Bolgoda bridge.
Talpitiya bridge.
Footbridges over the Mahaweli-ganga at Lewella and at the Experiment Station, Peradeniya.
Reconstructing bridge No. 28/4 on Madawela-Teldeniya-Nugatenne-Bintenna road.
Widening Bridge at Mandandawala, Matale Town, Kandy-Jaffna road.
Strengthening Malwatu-oya bridge—74th mile, Kandy-Jaffna road (Mirisgonioya to Galkulam).
Widening bridge No. 15/3, Maradankadawela-Habarana road.
Strengthening Katugastota bridge.
Renewing steelwork of and widening abutments of bridge No. 4/10, Uda Pussellawa road.
Bentota bridge.
Hikkaduwa bridge.
Improvements to Tudawa bridge No. 2/2, Matara-Hakmana road.
Reconstructing bridge No. 1/7, Hakmana-Tangalla road.
Repairs to Gintota bridge.
Causeway over Aruvi-aru on the Murugan-Silavaturai road.
Strengthening bridge No. 29/1, Mankulam-Mullaittivu road.
Bridge No. 28/2, Karaitivu-Sammanturai road, 6 spans of 35 feet each.
Improvements to bridge No. 24/5, Batticaloa-Trincomalee road.
Reconditioning platform of bridge No. 48/3, Coast road south, Kalmunai District.

Construction of bridge No. 17/5, Kurunegala-Puttalam road.
Construction of bridge No. 5/3, Kurunegala-Puttalam road.
Construction of bridge No. 1/5, Kurunegala-Polgahawela road.
Strengthening bridge No. 21/3, Moneragala-Pottuvil road.
Reconstructing bridge No. 5/5, Bibile-Medagama road.
Improvements to bridges Nos. 55/3, 55/7, 67/8, and 60/4, Kendangamuwa-Pelmadulla road.
Renewing bridge No. 52/9, Kendangamuwa-Pelmadulla road.
Strengthening Kuruwita bridge.
Strengthening bridge No. 3/7, Pasyala-Giriulla road.

New Roads.

Extension of Kukul korale road from Badureliya towards Kalawana.
Approach road to Pallewela Railway Station.
Welimada-Kirklees road, Welimada-Haloya.

Additions and Improvements to Roads.

Improving junction of Kotte-Padukka road with Cotta road.
Improving and widening blind corner, 23rd mile, Colombo-Galle road.
Widening road at culvert 34/9, Colombo-Galle road.
Improving roads, &c., New Secretariat and Council Chamber.
Improvements to approach roads, Welikada Jail.
Improving approach roads to Mahara Prison.
Improvement to Colombo-Kandy road, $4\frac{1}{4}$–$4\frac{1}{2}$ miles.
Extending 7 culverts, Horana-Alutgama road.
Extending 8 culverts, Colombo-Kandy road.
Reconstructing 5 culverts on 20–27 miles, Colombo-Kandy road.
Improvements to Fruithill Corner, Colombo-Ginigathena-Nuwara Eliya road.
Improving 15th mile, Hambantota-Tanamalwila-Wellawaya road.
Widening road embankment, 34th mile, Hambantota-Tanamalwila-Wellawaya road.
Widening 194th and 198th miles, Kandy-Jaffna road.
Metalling and improving Coast road, Pooneryn-Mannar, 12–14 miles.
Improvements to 12th mile, Mannar-Pesalai-Talaimannar road.
Widening and improving Arasadi-Malkampiddi road.
Improvements to Trincomalee-Yan-oya road, 7–10 miles.
Widening 54th to 60th mile, Batticaloa-Trincomalee road.
Widening narrow places on the 11th and 12th miles of Alawwa-Polgahawela road.
Improving approach road to Experiment Station, Wariyapola.
Construction and extension of culverts 6th and 7th miles, Badulla-Bandarawela road.
Improvements to dangerous places on 72nd to 83rd, 85th to 87th, 89th, 92nd and 93rd, 96th and 100th miles, Pelmadulla-Halpe road.
Improving Warakapola-Ruanwella road, 8–14 miles.

Improvements to Minor Roads.

Improving 6th mile, Cotta-Padukka road.
Improving bridges and culverts on 6th and 7th miles, Agalawatta-Badureliya road.
Relaying platform to bridges Nos 3/1 and 3/2, Pattalagedera-Kalagedihena road.
Reconstructing bridge No. 8/1, Karandeniya-Halpatota road.
Renewing platform of bridge No. 2/1, Tangalla–Wiraketiya road.
Improvements to culverts 16/8, 18/11, and 23/4, Kamburupitiya-Mawarella road.
Improvements to Uyilankulam-Alkattiveli road.
Reconstruction of bridge No. 5/2, Dambokka-Katupitiya road.
Improvements to bridge No. 2/1, Mahakeliya-Katupota road.
Improvements to bridge No. 4/2, Kahawatta-Bemulugedera road.
Improvements to Diyatalawa-Bandarawela road.

Miscellaneous.

New Aerodrome at Ratmalana.
Karaiyur Reclamation Scheme.
Transfer of P. W. D. Stores to the Railway Workshops at Maradana.

Waterworks.

Improvements to water supplies at Diyatalawa, Gampola, and Kahawatta.

IRRIGATION.

Early History.—From the earliest period in the history of the Island the importance of conserving water for irrigation has been recognized. Historical records indicate that the construction of the necessary tanks and channels came to be regarded as a special and solemn duty assigned to the King for promoting the wealth and welfare of his subjects, and that in proportion to the zeal with which different monarchs had exercised this prerogative their names were venerated. The remains of extensive and intricate networks of tanks and canals can be found to-day in every part of the Island. Though it is unlikely that all these various irrigation systems ever existed simultaneously in full working order, it is clear that the ancient engineers realized the principles of conserving on a very large scale the intermittent supplies carried by the main rivers, and with the advantage of an unlimited command of labour and an intimate knowledge of their terrain, though handicapped by the primitive nature of their technique and appliances, they made valiant and often successful efforts to apply them.

Decay and subsequent Growth.—Indigenous irrigation activity and agricultural prosperity seem to have reached their zenith about the twelfth century A. D. From then onwards to the modern era Ceylon was not infrequently ravaged by internal warfare and pestilence. No large irrigation work was constructed in this period, and, until the advent of the Dutch and subsequently of the British, the works already built

were allowed to fall into disuse and disrepair. There is probably no form of civil engineering work that demands more constant and unremitting attention to its maintenance than that connected with the control of water, and it is not difficult to appreciate that without such attention the once great irrigation works very rapidly succumbed to the onset of floods and the ceaseless inroads of the jungle. In modern times many of the old irrigation works have been restored to active usefulness. There are yet others embedded in the jungle which await restoration as and when occasion arises.

Importance of Irrigation.—The importance of irrigation in Ceylon is due to two causes, one dietetic and the other climatic. Rice is the staple food of the people and its cultivation, though not always remunerative, has, through secular and religious encouragement, acquired a definite social status as the national agricultural industry. Rice practically grows in water, and although the rainfall in the Island is generally adequate in total amount, its seasonal incidence is uncertain. Rice cultivation cannot succeed if it depends solely on the vagaries of such rainfall, and the construction and maintenance of artificial means of diverting and conserving water are manifestly essential.

Classification of Irrigation Works.—The total area under paddy in Ceylon to-day is approximately 800,000 acres, which may be divided into four main categories according to the system of irrigation practised in each :—

		Approximate Area. Acres.
I.	Major works	160,000
II.	Minor works : Village tanks	200,000
III.	Do. Village channels	170,000
	Total under artificial irrigation	530,000
IV.	Direct rainfall	270,000
	Total ..	800,000

The owners of land under major works are required to contribute, by an assessed annual rate, towards the cost of construction and maintenance of the works. The "construction rate" is generally a very small percentage of the capital cost of the work and the "maintenance rate" not infrequently produces considerably less revenue than the actual expenditure incurred by Government on the maintenance of the work.

Minor works, both tanks and channels, are maintained by the villagers themselves under the general supervision of Government officials and with the tangible and often considerable assistance of Government. The fourth category covers lands that, being situated in localities of evenly distributed rainfall, are able with reasonable chances of success to dispense with artificial irrigation. The trouble on these lands is often the super-abundance of water rather than its deficiency, and drainage rather than irrigation their particular need.

Progressive development of activities.—When the Irrigation Department was created in 1900 it was assigned the engineering duties of operating and maintaining those major works which had already been restored in whole or part, and of restoring a selection of old abandoned works under which the prospects of development appeared to be favourable.

Copyright Photograph. *Lionel Wendt.*

TAXI, SIR ?

The administrative side of these works and the general responsibility for all minor irrigation works remained the function of the revenue officers, with such advice and assistance as they required from the Irrigation Department. Under this regime steady progress was made with the extension and improvement of irrigation service under major works, and latterly the engineering resources of the department have been applied in a rapidly increasing degree to the improvement of minor irrigation tanks and channels on modern scientific lines. Another development of the department's functions, which is rapidly acquiring considerable importance, is the construction of schemes for preventing or abating floods, for improvement of drainage conditions on irrigable lands, and for exclusion of sea-water therefrom. With this development the department has become directly interested in all the four categories of irrigation in Ceylon and the scope of its service has correspondingly widened.

Irrigation Works.—Under the present Constitution the department is under the general control of the Executive Committee of Agriculture and Lands, and a progressive policy of active development is being pursued.

The summarized expenditure under the different services during 1935-36 is as follows :—

	Rs.	c.
Personal Emoluments	648,299	23
Other Charges (surveys, tools, transport, &c.)	303,666	53
Maintenance—		
Major works	276,726	42
Village works	21,854	86
Roads	48,843	32
Construction—		
Major works	622,749	48
Village works	201,942	85
Relief Schemes	150,947	8
Surveys done by the Survey Department for the Irrigation Department ..	108,367	47
	2,383,397	24

New Development Schemes.—As the last item in the foregoing summary suggests, the foundations are being laid for a much more extensive expansion of future irrigation policy. The engineering surveys of all large irrigation projects are now carried out by the Survey Department on lines specified by the Irrigation Department. The latter is thus provided with excellent plans, topographical, contour, and detailed, on which the whole of the scheme in all its detail can be laid down in advance, and the costly errors that have sometimes been made with other large projects, started without adequate data, are effectively prevented. In addition to the engineering surveys a survey is also carried out by the Agricultural Department to investigate the nature of the soils covered by the scheme, and to make a preliminary classification of the constituent areas according to their suitability for paddy or other crops.

In the loan recently floated the sum of Rs. 15 million is included for irrigation works, and already schemes of an aggregate estimated cost of about half this sum are approaching the construction stage.

Modernization of Construction.—In order to expedite the completion of these new schemes to a stage at which their benefits to agricultural development can be utilized serious consideration is being given to the question of using modern power-driven plant on a large scale. The department has recently purchased three Diesel-driven Excavators and a Diesel Tractor (Caterpillar) and Grader and these machines are being tried out on various works. The results to date are sufficiently satisfactory to justify further and more extensive trial, and in addition to the use of these machines on purely engineering construction it is probable that their economic suitability for the operations of clearing and asweddumizing jungle land will be tried out under actual working conditions.

Research and Training.—A Research Laboratory for the investigation of general hydraulic problems and the study of river and flood conditions by the use of scalar models is now being built and equipped in Colombo, and a specially trained Research Engineer has been engaged.

In conjunction with its function of practical hydraulic research this branch will enable the department to deal systematically with the urgently important problem of training its future engineers and field staff.

Scope of future Developments.—Ceylon is essentially an agricultural country, and as such has been well endowed by nature with all the material factors for the creation of a prosperous industry. These factors need proper development, however, and none of them more so than those connected with the control and conservation of the Island's lavish resources in water. Apart from the ultimate object of producing the staple food of the country in sufficient quantity to meet her own consumption, a forward policy in irrigation development will restore the paddy industry to its traditional prestige and natural importance, and enable the resettlement of a happy and contented peasantry on the land.

CHAPTER XIII.

Justice and Police.

The Judicial System of Ceylon.

Supreme Court.—The Supreme Court consists of a Chief Justice and six Puisne Judges. It has appellate and revisional jurisdiction in civil cases from all courts except Village Tribunals. It exercises no original jurisdiction in civil cases. Under Ordinance No. 2 of 1891 it is a Colonial Court of Admiralty.

The Supreme Court has original jurisdiction in all criminal cases and exclusive jurisdiction in respect of the more serious offences, such as homicide, rape, and the graver types of housebreaking and robbery. In practice it seldom tries cases which do not fall within its exclusive jurisdiction. It usually sits with a jury and tries cases committed for trial by a Police Court. It exercises appellate and revisional jurisdiction over all criminal courts except Village Tribunals. The Supreme Court may pass any sentence authorized by law. It has also the power to issue writs of *habeas corpus, mandamus, quo warranto,* &c., and also to

disenrol Advocates and Proctors who are found guilty of deceits, crimes or malpractices. Special jurisdiction is conferred on the Supreme Court to hear election petitions.

District Courts.—The District Courts, of which there are at present 21 in the Island, have unlimited original civil (including testamentary and matrimonial) jurisdiction and criminal jurisdiction in respect of all offences which are not within the exclusive jurisdiction of the Supreme Court. District Courts try only cases committed to them for trial by Police Courts*. District Courts may pass any of the following sentences :—

(*a*) Imprisonment of either description for a term not exceeding two years ;
(*b*) Fine not exceeding one thousand rupees ;
(*c*) Whipping ;
(*d*) Any lawful sentence combining any two of the sentences aforesaid.

When a person is convicted at one trial of any two or more distinct offences the aggregate punishment it can award is twice the punishment mentioned above.

Under sections 3 and 4 of Ordinance No. 2 of 1891 the Governor has power to appoint a District Court to have a limited Admiralty jurisdiction. The District Court of Colombo alone has been appointed to exercise such jurisdiction.

Police Courts.—There are 30 Police Courts and 3 Municipal Courts in the Island. The offences which a Police Court may try are specified in the schedule to the Criminal Procedure Code, 1898. Various Ordinances have also made other offences triable by a Police Court. A Police Court may not pass a sentence heavier than the following, except where an Ordinance has specially empowered it so to do :—

(*a*) Imprisonment of either description for a term not exceeding six months ;
(*b*) Fine not exceeding one hundred rupees ;
(*c*) Whipping, if the offender is under 16 years of age ;
(*d*) Any lawful sentence combining any two of the sentences aforesaid

When a person is convicted at one trial of any two or more distinct offences the aggregate punishment it can award is twice the punishment mentioned above.

Police Courts also hold preliminary inquiries into crimes with a view to committal for trial by a District Court or the Supreme Court. If after inquiry a Police Magistrate is of opinion that an accused should be discharged he makes order to this effect. Where a Magistrate is of opinion that an accused should be committed for trial to a court of competent jurisdiction, the record of the proceedings at the inquiry is forwarded to the Attorney-General, who directs the Police Magistrate to commit the accused or to discharge him.

A special jurisdiction is conferred on Police Courts to make orders for the maintenance of wives and children.

* Under section 152 of the Criminal Procedure Code, a Police Magistrate who is also a District Judge may, in the course of an inquiry into an offence which is triable by a District Court, proceed to try such offence summarily when he is of opinion that it can properly be so tried. In such a case there is no previous committal.

Courts of Requests.—Courts of Requests have original civil jurisdiction (subject to certain exceptions) in all actions in which the debt, damage, or demand or value of the land in dispute does not exceed Rs. 300.

There are 30 Courts of Requests in the Island, of which one (the Colombo Court) is presided over by a separate Commissioner. All the others are presided over by a District Judge or a Police Magistrate who acts as Commissioner of Requests in addition to his duties as District Judge or Police Magistrate.

Village Tribunals.—Village Tribunals have civil jurisdiction in actions in which the debt, damage, or demand or the value of the land in dispute does not exceed Rs. 20, or, where both parties consent, Rs. 100 and in cases between a Co-operative Society and its members. Village Tribunals have criminal jurisdiction to try breaches of rules made by the inhabitants of the subdivision or the Village Committee under section 29 of Ordinance No. 9 of 1924, and various minor offences enumerated in the schedule to Ordinance No. 9 of 1924. A Village Tribunal may impose a fine not exceeding Rs. 20 or 14 days' imprisonment in default of payment.

A Village Tribunal is presided over by a paid President appointed by the Governor. He sits with three councillors chosen by lot. In the case of a difference of opinion between the President and the councillors, the opinion of the President prevails (section 50 of Ordinance No. 9 of 1924).

There are 220 Village Tribunals in the Island, namely, 24 in the Western Province, 36 in the Central, 50 in the Southern, 6 in the Northern, 22 in the Eastern, 21 in the North-Western, 15 in the North-Central, 17 in the Uva, and 29 in the Province of Sabaragamuwa.

Village Committees.—Village Committees in subdivisions, where no Village Tribunal has been established, have power to try breaches of rules made by the inhabitants of the subdivision or the Village Committee under section 29 of Ordinance No. 9 of 1924, and have the same power of punishment as Village Tribunals.

There are 49 Village Committees exercising this jurisdiction in the Island, namely, 48 in the Northern Province and 1 in the North-Western Province.

The following schedule gives detailed information as regards the number of Courts, the number of Judges, Magistrates, &c. :—

Number of Courts, Judges, &c.

Court.	Number of Courts.	Number of Judges.	Remarks.
Supreme Court	1	7	One Chief Justice and six Puisne Judges
District Court	21	26	There are four judges for the District Court of Colombo and two each for those of Kandy, Galle, and Jaffna. There is one judge for the District Courts of Chilaw and Puttalam, one for those of Nuwara Eliya and Hatton, and one for those of Mullaittivu and Vavuniya. Eleven of these officers are Police Magistrates and Commissioners of Requests in addition to their duties as District Judges.
Police Court	30	29	There are three Magistrates sitting at Colombo. The following groups of Courts have one Magistrate each :— Badulla, Bandarawela ; Matale, Panwila, Teldeniya ; Nuwara Eliya, Hatton ; Jaffna, Kayts, Mallakam : Point Pedro, Chavakachcheri ; Batticaloa, Kalmunai ; Mullaittivu, Vavuniya
Village Tribunal	220	59	—
Village Committee	63	—	—

DIAGRAM No 10

CRIME IN CEYLON 1913-1936

Reproduced and Printed by Survey Dept. Ceylon 12. 4. 37.

POLICE.

The regular Police Force of the Island was established and is regulated by the Police Ordinance, No. 16 of 1865, as amended by the subsequent Ordinances.

Before the Police Force was constituted the duties of the Police were attended to by the Headmen. Regular Police have been gradually introduced into most parts of the Island since 1865. With changing conditions in the rural areas due to rapid and improved means of communication, the opening up of colonization schemes and other land schemes, the influx of strangers and, more especially, of the travelling criminal, the establishment of additional Police Stations to assist the Headmen is becoming more and more imperative. At present there are 169 Police Stations and 24 Police Offices.

The sanctioned strength of the Force is 1 Inspector-General, 2 Deputy Inspectors-General, 41 Superintendents, Assistant Superintendents, and Probationers, 235 Chief Inspectors, Inspectors, and Sub-Inspectors (including the Port Police), 2 Sergeants-Major, 377 Sergeants, and 2,576 Constables.

General.—The following statement shows the number of cases of grave crime disposed of as "true cases" by the courts during the past three years :—

	1934.	1935.	1936.
Homicide	255	295	316
Attempted homicide	114	125	162
Grievous hurt	1,295	1,139	1,413
Hurt with dangerous weapons ..	1,661	1,507	1,846
Burglary	2,453	2,421	2,676
Cattle theft	817	1,055	967
Other offences	3,698	3,637	4,115
	10,293	10,179	11,495

The statistics of crime for the past six years under the three main heads "Offences against the Person" (which are not directly preventible by Police action), "Offences against Property", and "Offences against the State" (riot, &c.) are as follows :—

Year.	Total Crime.	Offences against the Person (excluding Robbery).	Offences against Property (including Robbery).	Offences against the State.
1931	10,141	3,407	6,638	96
1932	10,484	3,564	6,817	103
1933	10,783	3,738	6,952	93
1934	10,293	3,562	6,659	72
1935	10,179	3,252	6,878	56
1936	11,495	3,947	7,491	57

With the exception of cattle theft the figures are the highest for the past six years. The figures for burglary, however, have not varied considerably, those for 1936 being only 15 in excess of those for 1931.

Control of Motor Traffic.—There were 26,571 prosecutions under the Motor Ordinance. 671 were for reckless or negligent driving, 22 for driving a car when intoxicated, and 85 for failing to report an accident

in which injury to a person was caused. In addition 58 cases for causing death and 100 for causing injury by a rash and negligent act were instituted under the Penal Code.

140 licences were cancelled or suspended.

3,195 accidents caused by motor vehicles were reported to the Police and 147 persons (of whom 100 were pedestrians) were killed as a result of injuries received in motor accidents.

In the majority of accident cases there is no compensation for the injured party where no offence can be proved or where the offender is acquitted in court. Compulsory third party insurance is essential, and it is of interest that a model Motor Ordinance is under preparation by the Colonial Office in which regulations for third party insurance are embodied in a form that can be standardized throughout the Colonies.

18,341 prosecutions were entered against omnibuses, a type of vehicle which was responsible for 637 of the accidents reported.

The following are some relevant figures :—

Year.	Motor Vehicles on the Road.	Number of Prosecutions for exceeding Speed Limit.	Number of Prosecutions for Reckless or Careless Driving.	Fatal Accidents.
1931	23,577	798	509	97
1932	23,203	688	400	87
1933	23,359	394	343	92
1934	25,010	402	449	122
1935	27,052	597	619	129
1936	26,571	619	671	147

The control of motor omnibus traffic is still one of the major traffic problems with which Police have to deal. There was again intense rivalry in many parts of the country between omnibus companies plying on the same routes, and, while much was done by arbitration and by cancelling or suspending the licences of omnibuses whose owners were the source of disorderliness and criminal acts on the public roads, it is clear that it is not possible for omnibus traffic to continue to ply upon the public roads without frequent clashes between rival omnibus companies unless a Central Control Board is established for the purpose of regulating routes, the number of omnibuses to be allowed to ply on any one route, fares and the times of departure and arrival.

Control of Bullock Cart and other Traffic.—Nineteen persons were killed in street accidents in which vehicles other than motor vehicles were involved and 9,309 prosecutions were entered against drivers and owners of such vehicles. Action has been taken in Colombo to compel cyclists to keep to the side of the road, while in most towns pedestrians are from time to time reminded to use the pavements and where there are no pavements to keep to the right.

Cinematograph Films.—Films imported into Ceylon have all been previously examined by Censors in England or in India. They are exhibited first in Colombo. If a film is objectionable exhibition is prohibited by the Chairman of the Municipal Council, who is the Censor for Colombo. This system acts as a check on the exhibition of objectionable films throughout Ceylon.

Maintaining order in the Streets.—During 1936 good order was maintained in the streets of Colombo. Special attention was paid to patrolling. The sale of opium and ganja was less active; but the employment of boys to hawk these drugs in the streets appears to be on the increase. Progress is being made with the establishing of a Home or Training School for Youthful Offenders which should help to serve as an efficient corrective and check the employment of boys in the illicit drug trade.

The molestation of passengers visiting the Island by touts is still a serious problem: legislation is under consideration that will more effectively check the nuisance.

Strikes.—A strike of omnibus owners occurred in February, two days before the General Elections in Colombo, as a protest against a regulation, approved by the State Council, which provided for the cancellation of drivers' certificates of competence under certain conditions. The strike lasted one day and mainly affected residents on the Colombo-Mount Lavinia route. The strike was settled by temporary measures to modify the working of the regulation complained of, pending legislation to amend the Motor Ordinance on the subject.

Criminal Investigation Department.

The following branches are included in this department:—Harbour and Foreshore Police, Train Police, Photographic Branch, Fingerprint and Footprint Bureau, the Counterfeit Note and Coin Bureau, and the Instructional Branch in Detective Work. The department deals with the investigation of difficult and complicated cases, the registration of aliens, supervision over persons entering or leaving Ceylon, the investigation of cases under the Lotteries Ordinance, the suppression of Bucket Shops, the supervision of the import of firearms and explosives, and the supervision of the magazines and newspapers published in Ceylon. As the criminal becomes more skilful it is necessary to train Police in the most up-to-date and scientific methods of crime investigation and detection. The courses of instruction in detective work arranged by the Criminal Investigation Department insure the training of all ranks in how to look for clues on the scene of crime, how to preserve clues requiring examination by an Expert (such as the Government Analyst), and how to make deductions from them. The knowledge gained from these courses of instruction is being passed on, at classes held in the Provinces, to Headmen on whom falls the responsibility, in the majority of cases of crime reported in rural areas, of being the first Peace Officer to visit the scene and guard it until the arrival of regular Police.

The Central Bureau established in 1930 to deal with forged notes and counterfeit coins, dealt with 120 cases of forging, uttering or possessing forged currency notes as compared with 33 cases in 1935 and 37 in 1934. There were 47 cases of counterfeiting, uttering or possessing counterfeit coins.

PRISONS.

Number of Admissions.—The total number of admissions on conviction during 1936 was 15,624 (15,180 males and 444 females). Of this number, 1,239 were admitted on conviction from the Supreme and District Courts. 201 were convicted of murder and culpable homicide not amounting to murder.

Number sentenced to death and executed.—The number of male persons sentenced to death during the year was 69, of whom 37 were executed. Of these 37, 6 were executed in January, 1937. Two female persons were sentenced to death during the year, but both sentences were commuted to ones of imprisonment.

Daily average population.—The daily average population (both convicted and unconvicted prisoners) of the prisons was 4,106·67 (4,031·46 males and 75·21 females).

Reconvicted prisoners.—The number of reconvicted prisoners admitted was 4,636 (29·67 per cent. of the total admissions). Of this number, 1,585 were reconvicted criminals within the meaning of Ordinance No. 2 of 1926 as amended by Ordinance No. 27 of 1928.

Preventive detention.—The number of prisoners sentenced to preventive detention by courts during the year was 3. The daily average of prisoners undergoing preventive detention was 56·78.

Number in default of payment of fines.—The number of admissions for non-payment of fines was 11,064. In 10,265 of these cases the offences were either statutory or made punishable by Village Tribunal rules.

No statistics are available as to the number of cases in which time was given for the payment of fines.

Young Offenders.

(*a*) *Young first offenders.*—The number of admissions of young first offenders of the age of 16–21 was 943, of which number 608 were for non-payment of fines and 458 for statutory or Village Tribunal offences.

(*b*) *Young reconvicted offenders.*—The number of admissions of young reconvicted offenders was 353, of which number 173 were for non-payment of fines and 124 for statutory or Village Tribunal offences.

Religion and race.—The following table gives the nationality and religion of all convicted persons received into the prisons during the year 1936 :—

Table showing Nationality and Religion of all Convicted Persons received into Prisons during the Year 1936.

Nationality.									Religion.						
Resident Europeans.	Non-Resident Europeans.	Burghers.	Sinhalese.	Tamils.	Moors.	Malays.	Others.	Total.	Protestants.	Roman Catholics.	Buddhists.	Hindus.	Muslims.	Others.	Total.
1	—	49	11,957	2,155	1,186	108	168	15,624	25	1,075	11,243	1,938	1,252	91	15,624

Prison Punishments.—The number of punishments inflicted during the year on prisoners for offences against prison discipline was 2,157, as against 1,752 in 1935. Three prisoners were sentenced to receive

corporal punishment during the year 1936, as against nil in the previous year. There were three escapes during the year, all of whom were recaptured.

The Prisons Ordinance, No. 16 of 1877, placed all the prisons in Ceylon under the control of an Inspector-General of Prisons. Ceylon therefore enjoys the advantages of a unified prison system which renders possible classification by institutions in addition to subclassification in institutions.

The principle upon which this classification proceeds is the separation of the different types of offenders—especially the separation of the young offender from the adult, the first offender from the "habitual", the convicted from the unconvicted, and males from females. To each type of offender appropriate methods of treatment and training are applied.

The different prisons are utilized as follows :—

Welikada (*Colombo*), for the detention and training of the following classes :—

(i.) Adult first offenders with sentences of two years and over ;
(ii.) All "Star" class, *i.e.*, European or educated Ceylonese first offenders ;
(iii.) Young prisoners of the age of 16–21 (both inclusive) irrespective of length of sentence ;
(iv.) Female prisoners other than those sentenced to short terms in outstations who are detained in the local prisons.

Hulftsdorp (*Colombo*), for all local convictions from the courts of the Colombo District who are sentenced to short terms of one month and under.

Mahara is set apart for adult reconvicted prisoners with sentences of over two years in one section, and for all adult first offenders with short sentences ranging from over one month up to and including six months in a separate section. Selected prisoners from among the reconvicted prisoners are specially classified as Special Class B in which they serve a probationary period of six months prior to transfer to Kandy prison for industrial and other forms of special training in the Special Class A. Prisoners are also transferred to Mahara prison occasionally from other prisons for misconduct.

Bogambara (Kandy) is set apart for the following :—

(i.) First offenders convicted by local courts and sentenced to one month's imprisonment or less ;
(ii.) All first offenders with sentences of over one year and up to but not including two years ;
(iii.) Special class "A", *i.e.*, selected "habituals" from Mahara with sentences of over two years ;
(iv.) Prisoners undergoing sentences of preventive detention.

Jaffna is set apart for the following :—

(i.) Persons sentenced by the local courts to imprisonment for one month or under ;

(ii.) Short term reconvicted offenders with sentences of over one month and up to and including two years ;

(iii.) Prisoners transferred from other prisons for misconduct under monthly report.

The special gang is also located at Jaffna. The special gang is intended for prisoners guilty of continued bad or violent conduct. These prisoners are kept strictly apart from the other inmates.

Anuradhapura is set apart for the following :—

(i.) Locally convicted short term prisoners who are sentenced to one month and under.

(ii.) First offenders with sentences of over six months and up to one year.

Negombo prison serves as a prison for convalescent prisoners in addition to retaining local convictions sentenced to one month and under.

Galle, Badulla, and Batticaloa.—The prisons at Galle, Badulla, and Batticaloa are used for the detention of short term locally convicted prisoners, and prisoners on remand.

Remand prisons.—There are separate prisons for remand prisoners and persons awaiting trial, civil debtors, &c., only in Colombo (adjoining Welikada Prison) and in Kandy. At other stations the ordinary prisons for convicted prisoners are also used for the location of these types in separate blocks or wards.

Methods of Treatment of Different Types of Offenders.

A. *Young first offenders.*—All young offenders of the age of 16–21 inclusive with sentences of over one month are detained at Welikada in separate wards. Rover Scout principles are utilized for their training and regular camps are held. The Welikada Prison Rover Troop is the first officially recognized prison troop in the world. Educational classes, industrial and vocational training, First Aid instruction, Boxing, Gymnastics, Drill, and games form a part of the regular curriculum, in addition to the various Scout activities.

B. *Long term first offenders.*—The progressive stage system—a feature of the English prison system—has been adapted to suit local conditions and is largely used in connection with the training of these offenders. According to this system prisoners fall into different classes. Every prisoner sentenced to imprisonment immediately enters and remains in what is called the penal stage for one month. He then enters and remains in Class IV., when he becomes eligible to earn remission, for eleven months. Conditional upon good conduct and industry he is promoted to Class III. where he remains for one year and then on the same conditions to Class II. At the end of one year if his conduct is satisfactory he is promoted to Class I. Promotion from class to class carries with it a graduated scale of privileges and on entry into Class II., gratuity and good conduct badges can be earned. Prisoners who show special skill and aptitude in the various trades are appointed Instructors (Grades I. and II.) who are accorded enhanced rates of pay and privileges.

Copyright Photograph. *Lionel Wendt.*

"AT THE RECEIPT OF CUSTOM."

Another feature in the training of these long term first offenders is the placing of responsibility on individual prisoners. Long term first offenders in Class I. of exemplary conduct are selected for appointment as Disciplinary Prison Orderlies. Their duties consist in assisting the regular prison officers ; they are left in charge of small parties inside the prison and act as escorts within prison walls, &c.

A further experiment is the formation of Leagues on the lines of the Mutual Welfare Leagues in the New York prisons. There are two such Leagues—one for the Disciplinary Prison Orderlies and the other for prisoners who have earned good conduct badges. Inmate responsibility, managing their own affairs within limits and training in the ideals of good citizenship are the salient features of these Leagues.

All long term first offenders are employed and trained in one or more of the many trades and handicrafts taught in Welikada Prison. On reaching certain grades of the stage classification they earn money part of which may be spent in the purchase of books and extras to the diets or sent to their families and part of which is accumulated and paid on discharge.

C. *Reconvicted prisoners.*—For the training of reconvicted prisoners there are two classes in Mahara Prison. Specially selected reconvicted prisoners with sentences of two years and over constitute Class B. These prisoners while at work are kept separate from the others. Evening classes are held for them and they are supplied with books from the prison library. They are also given the privilege of playing games, &c. After probationary training for six months in this class all who prove satisfactory are transferred to Kandy where they form Special Class " A ". Prisoners in Special Class " A " are treated like first offenders in all matters relating to pay, industrial training, privileges, &c.

Labour.—All labour of a purely mechanical and unprofitable nature has been abolished. Prisoners are mostly employed on public works, the domestic services of the prisons, and on industrial undertakings. At Mahara the principal work is the quarrying of stone and stone breaking. In Jaffna the work consists of the reclamation of the lagoon. Welikada and Bogambara Prisons are highly industrialized. The following industries are carried on :—carpentry, tailoring, brush-making, rattan, fibre, shoemaking, blacksmiths' work, tin smiths' work, spinning and weaving, soap making, and printing. At Welikada there is in addition an up-to-date steam laundry which washes the linen of all the hospitals, railway, asylum, &c. The value of the outturn of prison industries for the year 1935–36 was Rs. 225,061·78, as against Rs. 220,327·81 during the previous year.

Education.—For young offenders, that is, those of 21 and under vernacular education is compulsory. At Welikada and Bogambara and also at Mahara evening classes, conducted by volunteer social, workers, have been organized for the benefit of both young offenders and adult offenders. These classes are held in English and in the vernacular. Commercial classes in typewriting, shorthand, &c., are also held in Welikada prison for the benefit of Star Class prisoners.

Recreation.—Well conducted prisoners, particularly young offenders and first offenders who have reached an advanced stage in their training

are allowed to take part in games both indoor and outdoor. Boxing, gymnastics, and volley ball are popular games.

Religious instruction.—There are no prison Chaplains in Ceylon but representatives of all creeds and denominations are allowed to visit the prisons, hold services, and give religious instruction. Services are held every Sunday and all prisoners are encouraged to attend the services of their particular denomination.

Preventive detention.—There is no separate prison for prisoners undergoing preventive detention. These prisoners are located in a portion of Bogambara prison specially set apart for them. But the conditions of an ordinary rigorous imprisonment prison afford little scope for the special course of training contemplated by the system of preventive detention, and the reorganization of the system is under consideration.

After care.—An unofficial organization known as the Ceylon Discharged Prisoners' Aid Association, with sub-committees in some of the principal towns, works in conjunction with the prison authorities and is the agency through which aid is given to discharged prisoners.

Remission and Review of Sentences.—All criminal prisoners sentenced to rigorous or simple imprisonment (except under Chapter 7 of the Criminal Procedure Code) become eligible to earn a remission of sentence, which is conditional on good conduct and industry and which is based on the mark system. on completion of the first month (30 days) of their sentences. The maximum remission of sentence that a prisoner can earn is, in the case of a male prisoner, one-fourth of the period of imprisonment during which he is allowed to earn marks and, in the case of a female prisoner, one-third of such period. Under rule 40 of the statutory rules also the case of every prisoner is reviewed by the Governor on completion of 4, 8, 12, 15, and 20 years respectively of the term of imprisonment.

Health of prisoners.—Whole-time resident Medical Officers are provided for the three Colombo prisons and for Mahara prison. The Medical Officers attached to all the other prisons are not whole-time officers but have other outside duties to perform as well.

At Welikada there is an up-to-date prison hospital intended to serve the three Colombo prisons, with accommodation for 120 beds for general cases and 60 beds for infectious diseases.

In the female section of the Welikada prison there is a ward with 7 beds for general cases.

At Bogambara there is a hospital consisting of 5 wards.

In all other prisons a separate ward is utilized as a hospital.

All cases which need operative treatment or special nursing are transferred to the ordinary civil hospitals for treatment.

The total number of deaths of prisoners (both convicted and unconvicted) admitted to prison was 49 in 1936, as against 95 in 1935. These deaths include prisoners who died in the prisons and prison hospitals as well as in civil hospitals and other medical institutions, but are exclusive of judicial executions.

CHAPTER XIV.

Legislation.

THE majority of the twenty Ordinances passed in 1936 consisted of amendments to the existing law. Of the rest, the following are the most important :—

The Whaling Ordinance, No. 2 of 1936.—Section 13 of the Whaling Industry Regulation Act of the Imperial Parliament, which was passed in 1934 in order to enable effect to be given to an International Convention for the regulation of whaling signed at Geneva on September 24, 1931, empowers His Majesty to extend the provisions of the Act by Order in Council to any Colony, subject to necessary exceptions, adaptations and modifications. The provisions of the Act when so extended to Ceylon will give the local courts jurisdiction to punish offences against the Act committed outside the coastal waters of the Island. Section 12 of the Act enables His Majesty by Order in Council to direct that the principal provisions of the Act shall not apply within the coastal waters of any part of His Majesty's dominions if there is in force, as respects those coastal waters, any local law which is substantially equivalent to those provisions.

The local Whaling Ordinance of 1928, however, was passed almost three years before the date of the Convention ; and the Secretary of State pointed out that its provisions were not substantially equivalent to the principal provisions of the Imperial Act, and requested that steps should be taken to amend that Ordinance in order to enable the necessary Orders in Council to be issued. The method of repeal and re-enactment appeared to be preferable to the process of amending in detail every section of the Ordinance of 1928 and every part of its Schedule, and the present Ordinance accordingly substitutes for the Ordinance of 1928 new provisions which are modelled on the relevant sections of the Imperial Act.

The Geneva Convention applies only to baleen whales, but this Ordinance is intended to apply to sperm whales also because they are found in Ceylon waters and are likely to be washed ashore as derelict whales ; and it can, if necessary, be applied to other species of whales and to other marine mammals of the order *Cetacea*. The killing or taking of right whales, immature whales, and female whales which are accompanied by calves is prohibited absolutely. The penalties provided for this and other offences under the Ordinance correspond to the penalties provided in the Imperial Act. Provision is made for the licensing of vessels and factories used for taking and treating whales ; and power has been taken to refuse licences on specified grounds, as such refusal is permissible under the International Convention. Authority is also given for the issue of special permits to approved persons to conduct whaling operations within the coastal waters of the Island for the purposes of scientific research.

The whales included in the definitions of the terms blue whale, fin whale, and right whale are those specified in the Schedule of the Imperial Act. Few of these whales are likely to be found in Ceylon waters, but they have been included on the suggestion of the Secretary of State in order to enable the necessary Orders in Council to be issued.

The Co-operative Societies Ordinance, No. 16 of 1936.—This is an amending and consolidating Ordinance which re-enacts most of the provisions of the repealed Ordinance No. 34 of 1921 with modifications and adaptations designed to meet the requirements of the new constitution and to facilitate the interpretation and administration of the law. Of the new provisions that are included in this Ordinance, the most important are the following :—

(1) In place of the duty imposed on the Registrar by the old Ordinance to register every Co-operative Society which conformed to the requirements, there is now vested in the Registrar a discretion to refuse registration subject to an appeal to the Executive Committee of Agriculture and Lands.

(2) The minority of a member of a Co-operative Society will not in future be a ground for invalidating or avoiding any contract entered into by him with the society.

(3) A principle essential to all co-operative enterprise—that each member should have only one vote in the conduct of the affairs of a society, irrespective of the amount of his holding in that society—to which the old Ordinance gave only a limited application, is now affirmed without reservation and given its full scope.

(4) What is known in the co-operative movement as the " loyalty clause ", has been inserted, and a society trading in articles which are the products of agriculture, animal husbandry or handicrafts, is enabled to compel its members either by means of by-laws or by express contract to dispose of the whole or any specified part of their output of such articles either to or through the society.

(5) In order to assist Co-operative Societies in obtaining credit facilities from ordinary banks, these banks are given the right to realize without recourse to court on securities pledged with them by a society for a general balance of account.

(6) As a safeguard against unnecessary litigation, provision is made for the reference of various matters to the Registrar or to arbitrators for settlement ; and finality is given to the decisions of the Registrar or the award of an arbitrator by the declaration that such decision or award shall not ordinarily be liable to be called in question in any civil court.

The Statutory Reprints Ordinance, No. 19 of 1936.—Apart from the special powers taken in one or two Ordinances like the Motor Car Ordinance, 1927, there has hitherto been no statutory authority for issuing, during the intervals between the revised editions of the Legislative Enactments, reprints of individual Ordinances brought up to date by the incorporation of all the amendments that may have been made in them. In the case of subsidiary legislation, even the periodical revision has been lacking because of the absence of any provision for the publication of a collected edition from time to time. This Ordinance enables the Governor to authorize at any time a reprint of any written law emdodying all amendments and alterations made in that law between the date of enactment and the date of the reprint.

Factory and Labour Legislation.

No legislation relating to factories or labour was passed during the year.

DIAGRAM No. 11

TOTAL REVENUE AND EXPENDITURE OF THE ISLAND

FOR EACH FINANCIAL YEAR (OCTOBER 1 TO SEPTEMBER 30) SINCE 1921-22

Reproduced and Printed by Survey Dept. Ceylon
7. 6. 32.

Subsidiary Legislation.

With the exception of two sets of rules made respectively under the Co-operative Societies Ordinance and the Muslim Marriage and Divorce Registration Ordinance, the large volume of subsidiary legislation issued during the year was concerned only with the amendment of existing subsidiary legislation or the introduction of such legislation into new districts or areas.

CHAPTER XV.

Public Finance and Taxation.

Revenue and Expenditure.

The revenue of the Island in the last five completed financial years was—

		Rs. c.			Rs. c.
1931–32	..	84,843,206 60	1934–35	..	98,993,551 55
1932–33	..	106,090,728 48*	1935–36	..	102,770,506 64
1933–34	..	104,100,361 7†			

The following is a statement of the expenditure in the same financial years :—

		Expenditure chargeable to General Revenue including accumulated Surplus Balances.		Expenditure chargeable to Revenue pending raising of Loan Funds.
		Rs. c.		Rs. c.
1931–32	..	96,870,003 43	..	186,075 94

1934–35	..	107,286,124 66‡	..	—
1935–36	..	109,740,474 82§	..	1,177,961 81

Public Debt.

On September 30, 1936, the sterling debt of the Island stood at £12,243,775 and the rupee debt at Rs. 3,000,000 towards redemption of which were held securities and moneys amounting to £4,224,984 and Rs. 3,217,200.

Setting off the securities against the debts and effecting conversion at 1*s.* 6*d.* to the rupee the net total Public Debt of the Island amounts to Rs. 106,700,011 which is only slightly more than the revenue for the year ended September 30, 1936.

A statement of the loan position of the Island as it stood on September 30, 1936, appears on pages (146) and (147).

* Includes Rs. 2,120,437·21 and Rs. 1,564,511·69 appropriated to general revenue from the Railway Renewals Fund and the Colombo Electricity Supply Depreciation Fund respectively.
† Includes Rs. 4,339,061·10 being surplus in the Sinking Fund of the 4 per cent. inscribed Stock, 1934.
‡ Includes Rs. 2,190,172·45 being expenditure charged to Special Reserve.
§ Includes Rs. 1,035,442·45 being expenditure charged to Special Reserve.

ASSETS AND LIABILITIES.

The assets and liabilities of the Island on September 30, 1936, were as follows :—

The assets consisted of—

	Rs.	c.
(1) Cash in the hands of the Deputy Financial Secretary, in fixed or current deposit in Banks and with the Crown Agents in London	11,773,671	54
(2) Unissued stores, investments in rupee and sterling gilt edged securities, advances to the General Manager of the Railway, other recoverable advances, security deposits in banks, &c., remittances in transit and suspense account	30,719,027	75
	42,492,699	29

The liabilities consisted of—

(1) Widows' and Orphans' Pension Fund	13,114,459	64
(2) Ceylon University Building and Equipment Fund ..	4,831,513	80
(3) Loan Funds	2,375,257	55
(4) General Reserve Fund	10,000,000	0
(5) Special Reserve Fund	1,295,317	55
(6) Court suitors and other depositors in the Treasury and the Kachcheries	9,181,066	30
(7) Other Governments and agencies, loans to local bodies (sinking funds) and unpaid drafts	768,330	40
(8) Electricity Board	263,602	3
	41,829,547	27
Surplus	663,152	2
	42,492,699	29

Taxation and yield thereof—

The main heads of taxation and the yield of each are as follows :—

	Rs.	c.
Customs	52,376,999	67
Salt	2,244,220	11
Country and foreign liquor	7,099,601	24
Licences—Sundries	711,804	51
Tolls	50,821	44
Stamp duties, including composition duty on Bank cheques and share certificates	2,891,498	78
Estate duties	1,410,631	17
Betting tax	238,393	43
Income tax	9,516,757	81
Tax on heavy oil motor vehicles	113,272	61
	76,654,000	77

Excise and Stamp Duties (*summarized*).—The amount realized from Excise revenue during the financial year under review was Rs 7,099,601·24 and that in respect of Stamp Duties Rs. 2,891,498·78. Compared with the revenue of the last financial year, Excise revenue shows a decrease of Rs. 258,648·95 and Stamp Duties an increase of Rs. 750,191·95.

Revision of Taxes.—During the financial year under review the following changes in taxes were made :—

	Old Rate. Preferential ad valorem.	Old Rate. General ad valorem.	New Rate. Preferential ad valorem.	New Rate. General ad valorem.
	Per Cent.	Per Cent.	Per Cent.	Per Cent.
Goods, Wares and Merchandise :—				
(i.) *Import duties —*				
(*a*) From October 1, 1935, Agricultural implements, namely, alavangoes, axes, forks for digging manuring or weeding, harrows, katties, knives for budding, pruning or tapping mamoties, picks, ploughs and saws	10	20	5	15
Aluminium foil for packing produce for export	5	15	2½	12½
Cotton, raw	—	5	Free	5
Exercise books in paper covers ..	10	20	5	15
Hoop iron and strapping wire and other iron and wire specially prepared for strapping packages	—	10	Free	10
Lead sheets and foil for packing produce for export	5	15	2½	12½
Paper, plain for writing and printing purposes, including plain envelopes and writing pads other than compendiums	—	5	2½	2½
Paper, mill-board, straw-board, card-board, and paste-board	10	20	5	15
Printing type	15	25	5	15
Sewing Machines and parts thereof ..	15	25	10	20

Machinery for spinning or weaving cotton and parts thereof	15	25	2½	12½
Soap, toilet, perfumed and medicated ..	15	25	Rs. 12 per cwt. or 15 per cent.	Rs. 40 per cwt. or 30 per cent.*
Soap, other (including household and laundry soap)	10	20	Rs. 4·50 per cwt. or 20 per cent.	Rs. 9 per cwt. or 40 per cent.*
(*b*) From February 28, 1936, Copra, not being copra which (1) is the produce of the Maldive Islands, or, (2) has been purchased outside Ceylon in any territory other than the Maldive Islands on a forward contract proved to the satisfaction of a Collector of Customs to have been made and entered into prior to the twenty-sixth day of November, 1935	Old Rate. Free		New Rate. Rs. 2·25 per cwt.	
(ii.) *Export duties (Revenue) :—*				
From October 1, 1935, including the Medical Aid dues)—				
Tea—per 100 lb.	Rs. 2·37		.. Rs. 2·15	
Rubber (from September 30, 1936) per 100 lb.	Re. 0·75		.. Re. 0·80½	
(iii.) *Export Cesses :—*				
(Payable to *quasi* Government bodies) from November 1, 1935—				
Coconut product's cess (New cess)				
Copra			2½ cents. per cwt.	
Coconut oil			4 cents per cwt.	
Desiccated coconut			3½ cents per cwt.	

* Whichever produces the higher duty.

Heavy Oil Vehicles Taxation Ordinance, No. 56 of 1935, was passed in December, 1935, imposing as from January 1, 1936, a tax on motor vehicles which use heavy oil as fuel. The tax payable is as follows :—

Where the tare of the heavy oil motor vehicle—	Monthly Rate. Rs.	c.
(*a*) Does not exceed 1 ton	55	0
(*b*) Exceeds 1 ton but does not exceed 1½ tons	60	0
(*c*) Exceeds 1½ tons but does not exceed 2 tons	65	0
(*d*) Exceeds 2 tons but does not exceed 2½ tons	70	0
(*e*) Exceeds 2½ tons but does not exceed 3 tons	75	0
(*f*) Exceeds 3 tons but does not exceed 3½ tons	80	0
(*g*) Exceeds 3½ tons but does not exceed 4 tons	90	0
(*h*) Exceeds 4 tons but does not exceed 4½ tons	100	0
(*i*) Exceeds 4½ tons but does not exceed 5 tons	110	0
(*j*) Exceeds 5 tons	120	0

By the abolition of Estate Duty Ordinance, No. 51 of 1935, Estate Duty which had been in force from July 1, 1919, was abolished in respect of the estates of all persons dying on or after October 1, 1935. In consequence of this measure the additional rate of two per centum Income Tax charged by section 20 (6) of the Income Tax Ordinance on companies whose shares are not movable property in Ceylon for the purposes of the Estate Duty Ordinance, was also abolished as from April 1, 1936, by Ordinance No. 53 of 1935.

A new class of inland postal articles was introduced, viz., " Blind Literature " transmissible by post at the specially reduced rate of three cents for every two pounds. Prior to the introduction of this new class, Blind Literature was transmitted as Printed Matter for which the rate is two cents for every two ounces, or as parcels.

CURRENCY.

On September 30, 1936, the value of the currency notes in circulation amounted to Rs. 44,334,994. The Commissioners of Currency on this date held silver rupees to the extent of Rs. 14,158,063 and British, Indian, and Colonial securities amounting to Rs. 36,276,082 (cost price) or Rs. 42,685,087 (market price).

The value of the reserve on September 30, 1936, was thus in excess of the value of the notes in circulation by Rs. 5,960,900 taking the investments at cost price.

During the year silver rupees to the extent of Rs. 188,050 were received from the public and the banks in exchange for currency notes.

Subsidiary coin of various denominations amounting in all to Rs. 11,628,067 was in circulation in the Island on September 30, 1936.

EXCHANGE.

The rates of exchange on London on December 31, 1936, were as follows :—

Selling demand	1*s*. 6 3/32*d*. to the rupee
Selling telegraph transfer	1*s*. 6 3/32*d*. to the rupee
Buying demand	1*s*. 6 3/16*d*. to the rupee

ESTATE DUTIES.

Estates of deceased persons over the value of Rs. 5,000 were chargeable to Estate Duty, but Ordinance No. 51 of 1935 prescribed that Estate Duty should not be levied on estates of persons dying on or after October 1, 1935. During the financial year, 1935–36 a sum of Rs. 1,425,741 was collected as Estate Duty, as against Rs. 1,818,986 collected in the previous year.

CHAPTER XVI.

Miscellaneous.

Land.

The climate varies considerably in different parts of Ceylon, and this fact has an important bearing on the development of land in the Island. There are two main climatic divisions, namely, the wet zone (comprising the centre and south-west of the Island) and the dry zone (comprising the northern and eastern parts).

The wet zone is the part of the Island, roughly a quarter of it, that receives the rain of the south-west monsoon. The rainfall in this zone is both ample and well distributed, with the result that conditions are favourable for agriculture. Tea, rubber, coconuts, and other economic crops can be grown readily, and under normal conditions profitably. As a result of the international agreement to restrict the production of tea and rubber these products may not now be grown. In addition, village cultivation flourishes. For many years past the wet zone has steadily developed, and the population has increased considerably. At the present time, this zone contains the greater part of the population of the Island, and there is comparatively little land available for development except in remote or inaccessible districts.

In the dry zone, on the other hand, conditions are far less favourable. In the first place, the rainfall, though not really inadequate, is so unevenly distributed that the country suffers badly from drought each year, except where extensive storage tanks have been constructed. In the second place, a large part of the dry zone is extremely malarial.

For these reasons, the greater part of the dry zone is thinly populated and practically undeveloped. Where the land can be irrigated or the rainfall is favourable paddy is grown ; and a certain amount of land, chiefly near the coast, has been planted with coconuts. Most of the villagers, however, are mainly dependent on " chena " cultivation, that is to say, the periodical clearing and cultivation of tracts of jungle, which are abandoned after one or two crops of grain or vegetables have been grown on them. Systematic farming is unknown. Attempts are being made to develop this area.

A great obstacle to land development is the fact that land titles are often both complicated and uncertain. This is due to two main causes, the claims of the Crown and the absence of any system of registration of title.

In general, all undeveloped land is presumed by law to be the property of the Crown till the contrary is proved. It is clear, however, that to insist that this presumption shall be strictly applied is likely to lead to hardship in many cases. Legislation has therefore been passed providing machinery for dealing with the claims of private persons to land to which the presumption in favour of the Crown applies. The law on the subject is contained in the Land Settlement Ordinance, 1931, as amended by Ordinance No. 22 of 1932 and Ordinance No. 31 of 1933. A special department—the Land Settlement Department—has been organized for the purpose of systematically dealing with all the undeveloped land in the Island under these Ordinances. This undertaking involves a great deal of work, however, and is not likely to be completed for many years.

The need for a system of registration of titles to land has long been recognized, and in 1933 a Committee was appointed to consider this question. The Committee has submitted a report containing proposals for a system of registration of titles suitable to the conditions prevailing in Ceylon, and it is hoped that the necessary legislation will soon be taken in hand.

Till recently it was the practice not to advertise any Crown land for sale or lease unless some one had applied for that land. When such an application was received, steps were taken to survey the land, and eventually to dispose of the freehold or leasehold by public auction. This system had many disadvantages. Long delays were almost inevitable ; the original applicant could not be sure of obtaining the land he wanted, at any rate at a reasonable price ; the development of the available land was haphazard rather than systematic ; and there was a tendency for the needs of the villagers to be overlooked.

The present policy is for Government to take the initative in disposing of Crown land. As a necessary preliminary, the Crown land in each village is " mapped-out ", that is to say, it is allocated to various definite purposes in the following way. In the first place, land is set aside for the needs of the State and of the permanent village population. The next consideration is to reserve land for alienation to villagers who are unable to get land in their own villages and are prepared to move to localities where land is available. If possible, land is then provided for development by Ceylonese of moderate means. Any land remaining is made available for alienation to other persons, irrespective of their means or race. Once a village has been mapped-out, the Revenue Officer in charge of the district can dispose of the Crown land in that village without fear of overlooking the interests of any part of the community. He is therefore able to take the initiative, and periodically offer land for disposal if he thinks there is likely to be a demand for it. Persons who receive land under this system are put in possession with the least possible delay.

A further change is in the tenure of land alienated by the Crown. Hitherto the only tenures have been freehold and leasehold, but a new tenure was introduced by the Land Development Ordinance, No. 19 of 1935, which came into force on October 15, 1935. The principal features of this tenure are as follows :—

(*a*) The owner is obliged to cultivate the land, or utilize in some other way specified in the grant.

(*b*) The owner is required to make a small annual payment to the Crown in perpetuity.

(*c*) The land cannot be subdivided beyond the limit specified in the grant, or held in undivided shares smaller than the fraction specified.

(*d*) The succession to the land is not regulated by the ordinary law of inheritance, but by special rules designed to prevent the land from being subdivided.

(*e*) In certain cases, the owner is forbidden to lease or mortgage the land except to the Crown, and may not otherwise dispose of it without the Revenue Officer's consent.

In rural areas, the general policy now is to alienate Crown land required for agricultural purposes by peasants and Ceylonese of moderate means

under the Land Development Ordinance. In urban areas the mode of alienation is normally by long lease. Outright sales of Crown lands have been reduced to a minimum.

The Ordinance provides adequate machinery for enforcing the conditions of the tenure.

It is the present policy of Government not only to take the initiative in bringing land forward for disposal but also to provide a positive stimulus to landless villagers to leave their homes and either take up land in less congested villages or found new villages in undeveloped districts. Thus, "colonization schemes" have been started in various parts of the Island, and those willing to take part in these schemes have been helped with grants of land and money.

The villagers are conservative, and as a rule are very reluctant to leave their homes. On that account, progress with colonization schemes has necessarily been slow, and is likely to remain so for some time to come. Eventually, however, it is hoped that the villagers will become less reluctant to leave their homes, and the congestion caused by the growth of the population will cause an increasing number to migrate each year. In this way it should be possible gradually to reclaim large tracts of the dry zone, which are now almost uninhabited, but which formerly supported a large population.

One of the greatest difficulties that the village cultivators have to contend with is that of disposing of their produce at a remunerative price. On this account, a new department has recently been formed, which is responsible for the development of agricultural marketing. Satisfactory progress has already been made, and it is hoped that, as the organization of this department develops, it will become possible for villagers, even in remote parts of the Island, to dispose readily of their surplus produce.

PRODUCTION FORESTS.

During the year under review the activities of the Forest Department were governed by the decisions arrived at by the Executive Committee of Agriculture and Lands, as published in Sessional Paper XI. of 1936.

A brief summary of what has been done with a view to giving effect to this policy is given below :—

(*a*) *Administration.*—The number of the territorial divisions was limited to four, whilst separate divisions, with headquarters in Colombo, were established for working plans, exploitation, utilization research, and silviculture.

(*b*) *Working Plans Branch.*—With a view to the establishment of a stable forest policy, intensive forest reconnaissance, enumeration and stockmapping was continued as a preliminary to the preparation of a comprehensive working plan for the forests of the wet zone. At the same time a detailed plan was prepared for the systematic extension and management of the jak (*Artocarpus integrifolia*) plantations of the intermediate zone.

(*c*) *Exploitation Branch.*—Pending the submission of working plans for the reserves, exploitation was confined to the "Other Crown Forests" not required for future management.

7——J. N. 65863 (6/37)

(*d*) *Utilization Research Branch.*—In order to cope with the large number of important outstanding research problems an officer of the department, specially trained at Government expense, was placed in charge of this division.

(*e*) *Silvicultural Branch.*—An officer specially trained at Government expense, was placed in charge of this division, and will in future be responsible for the management and co-ordination of all silvicultural research.

(*f*) *Fauna Protection.*—Pending the passing of the proposed new Ordinance dealing with this subject, the Forest Department took over the intensive protection of selected localities.

The main objective of the new policy is "to make the Island self supporting in timber and essential forest produce, both by the systematic exploitation of existing natural resources and by the artificial regeneration of selected area". Pending mapping-out of available land which is required for this national purpose artificial regeneration has been restricted and exploitation has been confined to the unclassified forests not required for future scientific management.

Whilst formulating this policy it was decided that it would be advantageous to restrict departmental retail sales of timber and encourage private enterprise by introducing wholesale methods of sale. At the same time it was decided to provide greater facilities for the free removal of timber and forest produce by villagers.

As a result of these decisions there has been a considerable drop in the revenue previously derived from these sources. On the other hand there is an encouraging increase in the demand for indigenous timbers at the more attractive wholesale rates provided by the Monopoly-Royalty system now in vogue.

Owing to the large area of forest land recently alienated for agricultural development in the wet zone, this increased demand has, during the year, been confined almost entirely to the hardwoods of the dry zone. The comparative figures given below illustrate the satisfactory increase in the output from the wholesale coupes of the dry zone :—

	1935.	1936.	Increase.
Broad gauge sleepers	94,263 ..	111,016 ..	+16,753
Narrow gauge sleepers	12,098 ..	24,510 ..	+12,412
Log timber (cubic feet)	15,754 ..	32,418 ..	+16,664
Sawn scantlings (cubic feet) ..	22,813 ..	26,090 ..	+ 3,277

Expenditure during the calendar year amounted to Rs. 574,749·68, as against Rs. 590,250·28 in 1935, whilst cash revenue amounted to Rs. 398,143·08, as against Rs. 378,886·48 in 1935.

SURVEY.

The Survey Department.—As no land can be alienated or otherwise dealt with by the Crown until it has been surveyed and demarcated, the work of the Survey Department is of great importance. Its chief activities in this connection may be summarized as follows :—

(*a*) Application Surveys, *i.e.*, scattered disconnected surveys of small areas of land required for sales, leases, and various other purposes.

(*b*) Block Surveys, or continuous surveys of large areas of land according to villages, showing private land *en bloc* and not according to claims.

THE COLOMBO HARBOUR.

(*c*) Acquisition Surveys, or surveys of land to be acquired by the Crown for public purposes.

(*d*) Town and Forest Surveys, and isolated surveys for settlement and miscellaneous purposes.

(*e*) Land Development, Peasant Proprietor, and Colonization Surveys.

(*f*) Irrigation Surveys, *i.e.*, engineering surveys and the preparation of plans and sections for use in the investigation and development of Irrigation Schemes to be undertaken by the Irrigation Department.

Topographical Surveys.—In addition, the Survey Department, having completed a Topographical Survey of the Island, is now engaged upon a Topographical Revision Survey. Sectional maps for the whole Island on the scale of 1 mile to the inch can be obtained at the Surveyor-General's Office, Colombo, and numerous small-scale maps are also published. The chief of these are—

4-mile and 8-mile to the inch maps of the Island.
8-mile to the inch motor maps.
6-mile to the inch motor maps, in book form.
4-mile and 24-mile to the inch agricultural maps.
Aviation map of Ceylon and South India on 1-mile scale.

Other Work of the Survey Department.—The other work of the Survey Department is not directly connected with the subject of this chapter. It includes—

(1) Precise Levelling.
(2) Town-planning and Assessment Surveys.
(3) The Observatory and Meteorological Stations.
(4) Trigonometrical Surveys.

COLONIAL ANNUAL REPORTS

H.M. Stationery Office publishes the Annual Reports on the Social and Economic Progress of the Peoples of the Colonies and Protectorates, most of which contain a map of the Dependency concerned. More than 40 Reports appear each year and they are supplied at the Subscription price of 50s. per annum. (This rate does not include Mandated Territories.) Individual Reports may also be purchased and standing orders placed for their annual supply

Reports, etc., of Imperial and Colonial Interest

THE COLONIAL EMPIRE IN 1937-38

Statement to accompany the Estimates for Colonial and Middle Eastern Services 1938 [Cmd. 5760] 1s. 3d. (1s. 5d.)

ECONOMIC SURVEY OF THE COLONIAL EMPIRE

A comprehensive Survey, including Memoranda on the Economic Situation of the individual Dependencies and on the Products of the Colonial Empire

Survey for 1938 [Colonial No. 149] £1 7s. 6d. (£1 8s. 2d.)

MARKETING OF WEST AFRICAN COCOA

Report of Commission [Cmd. 5845] 3s. 6d. (3s. 9d.)

EMPIRE SURVEY

Report of the Proceedings of the Conference of Empire Survey Officers, 1935

The Conference was mainly occupied with questions related to trigonometrical and topographical surveying. It also discussed the various aspects of air survey work with particular reference to aerial photography and the production of charts and maps [Colonial No. 111] £1 (£1 2s. 6d.)

COLONIAL DEVELOPMENT

Report of the Colonial Development Advisory Committee for the period 1st April, 1937, to 31st March, 1938 [Cmd. 5760] 9d. (1[illegible])

EDUCATION OF AFRICAN COMMUNITIES

Memorandum by the Advisory Committee on Education in the Colonies [Colonial No. 103] 9d. (7d.)

HIGHER EDUCATION IN EAST AFRICA

Report of the Commission appointed by the Secretary of State for the Colonies [Colonial No. 142] 2s. 6d. (2s. 8d.)

THE INTRODUCTION OF PLANTS INTO THE COLONIAL DEPENDENCIES OF THE BRITISH EMPIRE

A Summary of Legislation as at the end of December, 1938 [Colonial No. 141] 1s. (1s. 1d.)

VOCATIONAL AGRICULTURAL EDUCATION IN THE COLONIAL EMPIRE

A Survey [Colonial No. 124] 6d. (7d.)

EAST AFRICAN AGRICULTURAL RESEARCH STATION, AMANI

Tenth Annual Report [Colonial No. 151] 1s. (1s. 1d.)

NUTRITION POLICY IN THE COLONIAL EMPIRE

Despatch from the Secretary of State for the Colonies dated 18th April, 1936 [Colonial No. 121] 2d. (2½d.)

All prices are net. Those in brackets include postage

HIS EXCELLENCY SIR ANDREW CALDECOTT, K.C.M.G., C.B.E., GOVERNOR.

Annual General Report for 1937 on the Economic, Social, and General Conditions of the Island.

CHAPTER I.

Introductory.

THOSE who are moved to write about Ceylon are subconsciously driven to do so in terms of ecstatic fervour. Usually they express themselves in extravagant language, which produces the effect of presenting to the eye and ear a pageant at once exotic and overdressed. But the truth about Ceylon is best expressed in reducing description to its simplest terms. The majority of its people are peasants, the lives of its people simple; but against this background of natural and luxuriant beauty, of lives devoted to simple agricultural pursuits, of plantations reared by the industry of its variegated population, stand in sharp contrast the elegant structures of Western science. This mixture of rural simplicity and extravagant natural beauty is nowhere more poetically portrayed than in "the Song of Ceylon". The influence of the West has for more than a century impinged on the life of Ceylon; Portuguese, Dutch, and Indian influences have left their mark, the first two bringing the gifts of Western religious practices and Roman jurisprudence respectively, and the last being responsible for its permanent moral and spiritual outlook. These elements "the Song of Ceylon" portrays with the inspiration of genius. This film exhibits the real Ceylon with greater truth than any other modern narrative, and incidentally proves the cinema to be the best medium for depicting the national character of a community. The illustrations in this edition of the Annual General Report represent an attempt to show in still pictures what the moving scenes of the "Song of Ceylon" have done with genuine fervour and artistic truth.

Those who visit Ceylon for any other purpose than business and sport are undoubtedly drawn there by æsthetic considerations. The quest of beauty is the business of those who are fortunate enough to possess ample leisure and money enabling them to pursue their hobbies and indulge their tastes. Ceylon will satisfy this quest if the visitor has the seeing eye, and if he has the requisite patience for exploring beneath the surface, after he has exhausted all that meets the eye of the casual observer. Such a person will find that ordinary impressions pass across his vision with bewildering swiftness, and that the best way of procuring and fixing these impressions and capturing the fleeting glimpses of beauty which linger only for fractional parts of a second, is to make use of the camera. But the camera itself must be used intelligently. Otherwise the blend of colour and form and proportion which we call beauty will be irretrievably lost. A few extracts from the diary of a visitor will illustrate what is meant by seeing with "the eye of the camera".

"We were told that we should reach Colombo at dawn next day, and I was up betimes to catch the first sight of the shore under the first glow of sunrise. From the ship I could catch the clear outline of Adam's Peak. Entering New York one is confronted by the triumphant Statue of Liberty. Entering Colombo harbour one sees the distant Peak afar off,

gleaming as the transcendent beacon of human inspiration, that haven of light to which the thoughts of all worshippers of Buddha yearn, as symbolic of a step taken from time into Eternity (p. 3). Turning to more mundane sights, one skirts the fringe of Mutwal bay (p. 6) and tries not to see the huge Neon 'tea' sign which cuts across the landscape, and floats into the harbour past the light at the entrance to the harbour (p. 9). It is some time before one can be free from the attentions of the Port doctor, the irksomeness of landing, and the vigilance of the Customs. The ordeal of the Customs House was not so horrible as I expected. The Customs authorities soon found that I was not of the stuff of which smugglers are made, and let me through with the minimum of worry. In gratitude I took a picture of the Customs House (p. 12). Then to the refuge of the nearest hotel, where the touts cease from worrying and the mosquito begins his serenade.

"It was the hotel boy—a 'boy' of 50 summers—who directed me to the Government Tourist Bureau. I learnt that the Bureau had its temporary habitation in the office of the Registrar-General. It was only a few months old. The Director was very courteous and very apologetic, and very proud at the same time. I asked for a guide; he regretted the lack of guides, but worked out a programme for me. That evening I found myself at Mount Lavinia. I watched the bathers for a while (p. 15) and then strolled down the beach where the fishermen were mending their nets (p. 18). Fishing in Ceylon has hardly passed the patriarchal stage. The fishermen put out in the same craft—the catamarans with their steadfast outriggers—in which they took their catch when Christ fraternized with the men of Galilee, and they are as poor now as they were then. The Ministry of Local Administration I am told has a plan for improving the boats, the fishing tackle and nets of the fisherfolk. It is hoped that their conservatism will not resist this plan as it did some years ago. The lights of numberless little craft may be seen dotting the waters night after night as they lie several miles from shore. At dawn they will bring the catch ashore. The fish is auctioned under the ægis of the priesthood—most of the fishermen being Catholics, and the priest takes his tithe; and the middlemen reap more than a tithe of profit, but the fishermen still remain poor, whilst despite their industry Ceylon imports Rs. 346,000 of tinned fish. No attempt has yet been made to fish for canning. Still the little boat of which I took a shot (p. 21) does her part right worthily, and a trim little figure she looks as she puts off—with sails proudly swelling.

"Next day at the Races I saw Colombo in all its glory—rivalling the glamour of Ascot. I was intrigued by the display of sareed ladies who turned out to watch. I am told that formerly the Sinhalese ladies wore a simple jacket and skirt when they did not wear English dress, but most of them now wear the saree like the Tamil ladies. A film director was busy taking shots for a picture featuring Ceylon local colour—I took a few shots myself. One was the winner of the beauty competition in 1937 (p. 23). The other two shots show the saree to be a perfect setting for Grecian beauty (pp. 26, 28). Without meaning any disparagement I may say that the Sinhalese and Tamil gentlemen are not so well served by their addiction to Western dress. The arrangements of the Turf Club, as the newspapers say, are perfect, all classes being catered for, and enclosures being provided to enable every one from the poorest rickshaw puller upward to stake a bet. The infection of racing is all-pervading.

Copyright Photograph *Pldte. Ltd.*

SHADOW OF ADAM'S PEAK.

"One striking feature of the Races are the crowds. This was a particularly crowded affair because it was the Coronation Meet, held in honour of His Gracious Majesty King George VI. (frontispiece). At such meets the events generally include a Governor's Plate or Cup presented by the Governor. The Governor Sir Reginald Stubbs was on the eve of retirement. It was known that the Governor-elect would be Sir Andrew Caldecott, due to arrive in June, 1937 (p. 1).

"Another feature of the Races is the thronging 'bus traffic. The increase of 'bus traffic in Ceylon is to be closely associated with the development of racing. But for cheap 'bus fares it would not have been possible to assemble such mammoth crowds at such short notice. Incidentally these have aggravated the inevitable problem of road *vs.* rail traffic; and the Government Railway is now concerned to improve its financial position. A Transport Commission inquired into the situation last year. Small wonder that 'bus traffic has increased by leaps and bounds, the Ceylon roads are so marvellous, and there is so much to see as one travels through this wonderful country. It should be an easy matter to develop a country so rich in transport facilities. I lingered in Colombo because I wanted to see some of its other attractions. Its picture houses produce the latest films from England and America. They come not direct, but *viâ* India. At the time of writing, a Tamil play, Chintamani—euphonious name—has caught the fancy of the—I must not use the word 'natives': it is not good form to speak of the people of a country by that name. This play ran for over six months. By Western standards the Tamil and Indian plays are tedious and long drawn out. But I am told that, apart from the story, there were enchanting songs. I am sure that to Eastern minds such plays must make the strongest appeal and are far more appropriate than the jazzy stuff which is lavishly poured out on the Western screens. There are as yet no Sinhalese plays. But they will come.

"Next day the Director directed me to the Temple of Kelaniya. Kelaniya is the name of the river which flows from the centre of the Island into Colombo—now and then it expresses its sense of its own importance by flooding the country for miles overwhelming the suburbs of Colombo, and setting for the Ceylon engineers a problem, which has not yet been solved. The Temple is characteristic of the period in which it was built, and contains some wonderful friezes. The friezes I took speak for themselves (p. 31). The Sinhalese hold a festival here at the time of their national festival—the Wesak, and the worshippers bring flowers as gifts, not fruits, nor money, but flowers (p. 34). The scent of the flowers is incense to the nostrils of the Deity, the Divine Buddha (pp. 39, 42).

"From the temple I wandered through the village to find out how the inhabitants lived. There was a tile factory, and small village potteries. The potter works quietly and individually in his homestead. The tile factory was a more pretentious affair but there was none of the smoke or din usually associated with the industrialism of the West. The potter at work in his dark hut was not perturbed by my camera (p. 46) but was rather proud of his handiwork (p. 49). But his pottery is primitive, and lacks variety.

"But time passed and I was told there would be more exciting things further inland. As I passed on to the hills, I found the most domesticated animal to be the elephant—there were elephants bathing, elephants drawing logs, pulling carts, crossing rivers, elephants going to and from work, and when one met one of these giants on the road, he was easily steered to a side to let one pass (pp. 51, 54, 57).

"Village economy consists of mixed cultivations. Except for the big tea and rubber estates, cultivation is done on a small scale, and consists of small patches of coconut gardens surrounding small mud or stone houses whose owners grow plantains, vegetables and a little fruit. But nowhere does one see long stretches of banana plantations as in Jamaica or canefields as in Barbados, or pineapples as in Mauritius, neither capital nor co-operative effort having been utilized to this end. There were here and there stretches of rice fields, those terraces of green and gold (p. 60) which shimmer in the sun and conjure up visions of green pastures in some cloudless Utopia, but here again the plan of cultivation was on a comparatively small scale. What is sold at the village boutique reflects what is grown in the village (p. 63). The banana, pineapples, coconuts one sees at the village boutique are the surplus produce of the village ; by the sale of these the villager is able to buy the oil, utensils, electric torches, bicycles and other things he needs. The village is self-supporting, but investigation will show that the total wealth of the village is not great. Still the general impression conveyed is one of prosperity and happiness. A recent malaria epidemic exposed the fact that the basis of this prosperity is very shallow. It is the part of good statesmanship to increase the numbers of peasant holdings and earnings of the peasantry. The keynote of the village life however is contentment. Sufficient for the day is the evil thereof. The peasant is better off than the fisherman. But no evil seems to have come near the mother of the happy family which I photographed (p. 66). If she or one of her children falls ill, she will summon the Vedarala or native doctor, and if his other nostrums fail, she will hold a devil dancing ceremony, and by this expedient there is a hope of exorcising the evil influence. The dance here, as elsewhere is religious in its origin. The dancers best known to us all are the dancers who accompany the noble procession called the Perahera at Kandy (p. 71 Kandyan Dancers).

"Kandy is my objective, and so I will lose no more time in getting there ; but first I will halt to admire the natural archway on the Kadugannawa Pass (p. 74). A troop of sailors from His Majesty's fleet have come out for a ride in buses, and can get no further. They stand about in various poses admiring the scenery and gazing upon Bible Rock. Not many words pass between them—they are in the presence of some thing new ; they use the same oaths, and with a different timbre.

"Kandy is surely an earthly paradise. If one could live here either on its hills, or by the lake (p. 78) or in the precincts of the temple or in its ancient palaces undisturbed, and free to dream of 'lost horizons'! One can only utter commonplaces about it, because its beauty has become so familiar, but familiarity does not breed contempt if one remembers a verse which has in its turn become commonplace—'a thing of beauty is a joy for ever'.

"I should have been glad to spend several days here meandering through its historical places and relics—surveying its markets, and thinking that here a man might satisfy all the needs of his soul, examining Kandyan artwork and talking of Kandyan customs, creeping through gardens, climbing hills and by-paths, watching the college boys at their games, and generally doing vigorously the things which a non-attached but curious man likes to do. But I had an introduction to a planter with a double-barrelled name who lived in the hills beyond Nuwara Eliya. So in a day or two I set out to my destination. You may take a high road to Nuwara

Eliya *viâ* Pussellawa and the Ramboda Pass, or the low road *viâ* Nawalapitiya, Hatton, and Talawakele. This is the region of the tea plantations and the journey lies amid hills over which hang mists, 'down dropping veils of thinnest lawn' and the loveliest waterfalls, glistening cascades which are the reserve powers of the country, waiting to be turned into electric current and a new source of wealth (p. 81). I took the high road.

"My new friend showed me over his factory (p. 84) and I was to learn that the essential labour was indentured. The indigenous Sinhalese and Tamils do not like earning wages by work on estates. It is an important sidelight on social psychology. The greatest wealth of the country lies in its tea, and its tea is mainly the product of European capital and Indian labour. Tea provides 55·1 per cent. of its exports, rubber 24·9 per cent.—but rubber is evenly divided between local and European capital; 15·6 per cent. of exports is derived from its coconut products, most of this being in the hands of the indigenous population, who own large and small holdings, in many cases burdened with debt. There is a State Mortgage Bank, but my friend told me its operations are limited and an Agricultural Credit Corporation to grant relief from the burden of indebtedness is contemplated. The picture is thus not altogether rosy.

"Life on an estate is in many respects ideal. The daily round of the planter is a satisfactory blend of work, rest and work, work being at the two ends of the day; and in the slack season he may indulge his hobbies. My friend's hobby was shooting. He had good days now and then, and returned, so to speak, with his quiver empty and his bag full (p. 88). He told me that there was no real big game shooting in Ceylon—in fact there had been overshooting in the past, and then it was found necessary to conserve what was left by strict prohibitions, and national parks were in process of foundation. Still there was good shooting for those who knew where to find it. It was worth while squatting near a jungle river to see what would happen (p. 91). The Horton Plains was his happy hunting ground, whilst I found sweet solace in the Hakgala Gardens (p. 94). There was trout fishing for hook and line (p. 97), and I was planning a day to be the 'compleat angler' when a telegram recalled me to Colombo.

"In Colombo I arrived in time to be present at a remarkable debate held in the State Council which may prove to be a landmark in the history of the Island (p. 100)".

We shall follow the diarist no further, but include a few pictures of our own illustrating Kandyan art work (p. 103), about which it might be said that it is unique, but it has stagnated; lacemaking (p. 105), copra manufacture (p. 108), and a few other industries (pp. 112, 115).

I shall close this section with a summary of the various projects undertaken or extended by the different Ministries in the course of the year.

Ministry of Education.—The Colombo Museum, in conjunction with the British Museum of Natural History

(*a*) commenced an Avifaunal Survey of Ceylon;
(*b*) sent an Entomological expedition to South India;
(*c*) established an Ethnological Department;
(*d*) opened a Palaeontological Section containing fossils of the Miocene and Plastocene age and remains of the elephant Palaeoloxcodon a species of rhinoceros and hippopotamus as well as teeth of Miocene fishes and invertebrates.

Archaeology.—108 books and 140 periodicals have been added to the Library. The photographic work has been brought up to date and 23 large photo-albums containing photographs of all the chief monuments and antiquities in Ceylon have been prepared. At Anuradhapura the southern gateway of the Ruvanvalisaya Dagaba was excavated and repaired.

Schools.—Apart from the usual educational activities, the Rural Schools Scheme introduced in 1932, is being developed with a view to bringing the school work in post-primary classes into closer relation with village conditions. A centre for training teachers in this type of work was opened in 1934 at Mirigama, and another at Weeraketiya in 1937.

Ministry of Communications and Works : Public Works.—Chapter XII. contains a detailed account of new works, including buildings, bridges and roads undertaken or completed during the year.

Post and Telegraphs.—The most important event of the year was the decision that Ceylon should take part in the Empire Air Mail Scheme for the conveyance of all letter mails by air to countries participating in the scheme. The first plane left Ratmalana on February 28, 1938.

The Postal Administration of Burma was separated from that of India in April, 1937.

Ministry of Agriculture and Lands.—The activities of the Agricultural Department are too numerous to be sketched in this section, which is really intended to include new projects undertaken during the year.

Extensive surveys were conducted in pursuance of the new Land Policy for establishing agricultural colonies of middle-class and peasant proprietors. Over 180,000 acres were surveyed in the Eastern Province.

Meteorological.—A pilot-balloon station was established at Mannar in connection with the Madras-Colombo Air Mail Service.

Forest.—It has recently been decided that the protection of wild life, both animal and plant, should be one of the duties of the Forest Department. The Fauna and Flora Ordinance of 1937, provides for proclamation of lands as National Parks and Game Sanctuaries. The Conservator of Forests is also appointed Game Warden.

Co-operation.—There were on April 30, 1937, 1,117 registered Co-operative Societies of which 4 were Co-operative Central Banks, 930 were Village Credit Societies, &c. Since then 79 further Societies have been registered.

Ministry of Labour, Industry and Commerce.—Bureau of Industry and Commerce : The Government Tourist and Publicity Bureau opened in June became a separate unit under a separate Director in October, 1937. A new Ceylon Trade Commissioner for India with headquarters at Bombay was appointed in June, 1937. A Model Coir Factory was completed in December, 1937. A deputation composed of the Hon. the Minister of Labour, Industry and Commerce, and the Financial Secretary with the then Registrar-General, Mr. V. Coomaraswamy as Secretary went to London in March, 1937, to appeal to the Secretary of State for permission to establish a State Aided Bank in Ceylon and to discuss problems relating to trade matters. The deputation was well received and succeeded in winning the consent of the Secretary of State, but it was found that

Copyright Photograph *Lionel Wendt.*

MUTWAL BAY.

discussions about the trade of Ceylon with the United Kingdom and India could not proceed until the discussions between Great Britain and India were completed.

Labour.—An Unemployment Labour Bureau was opened at Akmimana in Galle District in 1937. The object is to combat unemployment and raise a supply of labour for estates from among the Sinhalese who do not take kindly to estate labour. It is proposed to open a Central Bureau and other Bureaux in other parts of the Island shortly.

Ministry of Home Affairs: Excise.—The tree tax system has come to stay in Jaffna. By this system a tapper pays a licence fee of so much per tree and may tap as much toddy as he likes during the season which lasts about 6 months. This system has replaced the system in vogue in other parts of the Island whereby an area is rented to a renter on a tender system, and the highest bidder is allowed to open one or more taverns at places approved by the Excise Commissioner. Under this system the profits go to the middleman, the renter ; under the tree tax system to the tapper. The tavern disappears under the tree tax system, and the thirsty may drink toddy under a tree in the palmyrah grove or take it home in a bottle or other receptacle.

Ministry of Local Administration.—A Yorkshire Coble has been constructed by the Harbour Engineer's Department to standard design. This type of fishing boat is modelled on the type used in the North Sea for deep sea fishing, and is intended to be the first step towards modernization of the industry by the introduction of a type of fishing vessel new to Ceylon.

Ministry of Health.—Last but not least.

In 1937 the Malaria Control Scheme inaugurated in 1936 was extended to further areas. The major part of the Island was covered with 55 Field Medical Officers who carry on intensive Rural Health work. Further experiments in river training were carried out by the Sanitary Engineer with a view to controlling the breeding of larvae in rivers. Provision was made for 6 more Cottage Hospitals in Divulapitiya, Walallawita, Pallegama, Ankumbura, Pungudutivu, and Mawatagama. The Nutrition Survey conducted by the Director, Bacteriological Institute, was published. A complete filariasis survey of the North-Western Province has been made into the characteristics of elephantiasis, and this has been followed by a similar survey of the Southern Province. The Mansonia mosquito plays his part in spreading this disease.

A new Board of Indigenous Medicine was appointed from May 1 under the Chairmanship of the Hon. Mr. S. W. R. D. Bandaranaike, Minister of Local Administration.

In my report for 1936, I remarked that the seven Ministries were in a favourable position for becoming seven " pillars of prosperity ". That remark is still true ; the Ministries are proceeding apace with new projects and developing recent ones as far as the limits of finance will permit ; but there is a universal clamour for reform of the Constitution set up on the report of the Donoughmore Commission in 1931 ; this clamour arises from the communities who feel that there is unequal distribution of power in the Constitution and have made representations to the Secretary of

State; it is hoped that the various elements in seeking their individual interests will not lose sight of the interests of the country as a whole. For particulars of the Constitution the reader is referred to Chapter II.

Situation and Dimensions.

Ceylon lies between 5° 55′ and 9° 50′ N. latitude and 79° 42′ and 81° 53′ E. longitude. The greatest length of the Island from north to south, *i.e*, from Point Palmyra to Dondra Head, is 270 miles; its greatest width 140 miles, from Colombo on the west coast to Sangamankanda on the east. Its area is 25,332 square miles, nearly the same as that of Holland and Belgium, or about half the size of England.

The approximate distances of Colombo, the chief port of Ceylon, from the other chief world ports, and the average tariff for the itinerary are given below :—

Colombo to London.	Nautical Miles.	Approximate Days' Journey.
Aden	2,100	8
Suez	3,407	12
Port Said	3,494	13
Marseilles	5,091	16
Gibraltar (*vid* Marseilles)	5,690	19
Gibraltar (direct)	5,407	18
London (by sea *vid* Marseilles)	7,005	22
London (by sea direct)	6,725	20
London (overland)	5,868	17

Colombo to India, &c.		
Calcutta (touching at Madras)	1,260	7
Bombay	875	2½
Rangoon	1,249	4½
Penang	1,276	4
Singapore	1,567	5
Hong Kong (touching at Singapore)	3,113	11
Shanghai (touching at Singapore and Hong Kong)	3,966	15
Yokohama (*vid* Singapore and Hong Kong)	5,083	21

Colombo to Australia.		
Fremantle	3,121	9
Adelaide (touching at Fremantle)	4,479	13
Melbourne (touching at Fremantle and Adelaide)	4,979	15
Sydney (touching at Fremantle, Adelaide, and Melbourne)	5,556	18

Colombo to South Africa, &c.		
Mauritius	2,099	10
Durban (touching at South African ports)	3,680	18
Cape Town (touching at South African ports)	4,362	21-30

Passage Fares.

Colombo-London :—

- 3rd and tourist single .. £20 to £60

Colombo-Boston and New York. £60 to £95

Facilities provided at the Passenger Jetty for the storage of baggage are described on page 68. Passengers' baggage is defined by the Customs Regulations to mean *bona fide* baggage (which includes wearing apparel

Copyright Photograph *Lionel Wendt.*

DOORWAY TO COLOMBO.

and personal effects) of a passenger accompanying him or arriving in Ceylon within one month, before or after his arrival, or within such time as the Collector of Customs in the circumstances deems reasonable. With certain exceptions, passengers' baggage is exempt from duty.

The Ceylon Government Railway serves the principal towns of the Island, and offers visitors excellent facilities for inland travel. Cheap first class tourist tickets obtainable from the Booking Office at the Jetty, the Fort Station, and recognized tourist agents at Rs. 50 (£3. 15*s.*) for two weeks and Rs. 75 (£5. 12*s.* 6*d.*) for one month, permit tourists to travel 951 miles of railway and visit the most important and historic towns. Servants accompanying tourists are issued third class tickets at Rs. 15 (£1. 2*s.* 6*d.*) for two weeks and Rs. 25 (£1. 17*s.* 6*d.*) for one month. These are issued throughout the year.

Similar "Tour Ceylon" tickets priced first class Rs. 40, second class Rs. 20, and third class Rs. 10 (half these rates for children under twelve years) were again issued during the Christmas holidays this year. These tickets are available for 14 days unlimited travel and will also be issued during the forthcoming Easter holidays.

The distances from Colombo to some of the principal towns of the Island, and information regarding sleeping and restaurant cars, &c., are found on pages 72–75.

There is no legal tariff for taxi-cabs within the municipal limits of Colombo, but the usual scale of fares is as follows :—

For the first half mile	50 cents
For each subsequent ½ mile up to 1 mile	12½ "
For each subsequent mile	75 "

Extra charges are made for each passenger over two, and for each piece of luggage other than hand luggage. A higher scale of fares is charged in the case of taxi-cabs hired between the hours of 9 P.M. and 6.30 A.M.

The above rates apply only to places within the municipal limits of Colombo. For trips to places outside Colombo Municipality special terms should be agreed upon *before starting*. The hiring-car fares to such places vary from 40 cents to Re. 1 per mile, with extra charges for detention.

There are hotels of the European type in Colombo, Kandy, Nuwara Eliya, Galle, and Anuradhapura ; the rates are usually Rs. 9 a day and upwards, the usual charge for first-class accommodation being Rs. 12 a day. Cold Storage Companies in Colombo supply ice and frozen meats and other foods by rail. In addition to hotels there are about 170 resthouses in various parts of the Island (marked on the ordinary motoring map), many of which are very delightfully situated beside the sea or some river or tank.

Useful information may be had from the new handbook published by the Automobile Association of Ceylon. "How to see Ceylon" by Bella Sidney Woolf is a favourite guide book for tourists. A more ambitious and informative book is Bassett's Romantic Ceylon, a recent addition to the voluminous literature on the subject.

CLIMATE.

On the whole, the climate of Ceylon is tolerable for the tropics ; the accessibility of the hills is a great boon to the dwellers in the plains, and a change to the sea is beneficial to those who live in the hills. In the

low-country, the districts which have been opened in rubber, coconuts, and other products are generally fairly healthy, but in the unopened localities malaria is common.

Temperature.—With regard to temperature, the range of variation at several stations is shown in diagram No. 1, facing this page.

The low seasonal variations will be noted, but it will be seen that the differences between the temperatures of low-country and up-country stations are considerable. The highest shade temperature registered in Ceylon was 103·7°F. at Trincomalee in May, 1890, and the minimum air temperature 27·1°F. at Nuwara Eliya in February, 1914. An extreme temperature of 103·7°F. is not excessive, but the humidity is considerable, the annual average percentage of saturation being generally about 80, in Galle and Nuwara Eliya 84, in Colombo, Jaffna, and Badulla 82, in Kandy 80, in Batticaloa 78, in Trincomalee 76. At Colombo, the "hot weather" season may be said to extend from March to May, and the "cold weather" from December to February. July and August are often pleasant, particularly on the west side of the Island.

For 1937 the mean temperature in the low-country varied from 82° at Trincomalee to 80° at Galle, while Nuwara Eliya, at an altitude of 6,000 feet, had a mean temperature of 60°.

Rainfall.—As is generally found in the tropics, however, the seasons are distinguished by differences in rainfall, rather than pronounced variations in temperature. The change in the direction of the monsoon winds, from south-west to north-east, causes a corresponding change in the location of the heaviest rain, which is usually experienced to windward of the hills, while during the intermonsoon seasons, local wind circulations are liable to give rain in any part of the Island.

The annual average rainfall varies from about 40 inches in the north-west and the south-east to over 200 inches in some parts of the interior.

The annual averages (1911–1930) are 91 inches at Colombo, 87 inches at Kandy, and 92 inches at Nuwara Eliya. Diagram No. 2, facing this page, shows the average monthly rainfall of 12 selected stations.

History.

The earliest inhabitants of the Island are thought to have been the Nagas and Yakkhas, the latter being perhaps now represented by the Veddas, a fast fading race. Legendary history has it that the first invaders were Aryans from the North of India, who, under the leadership of Vijaya, overcame the aborigines and established the Sinhalese dynasty. Early attention appears to have been paid by the invaders to irrigation works, agricultural development, and other branches of civil administration, and by the end of the third century A. D. a comparatively advanced stage of civilization had been reached.

The history of Ceylon down to the sixteenth century may be divided into two parts, viz., the period of the Sinhalese *Mahavansa*, *circa* 500 B.C. to 300 A.D., and that of the *Suluwansa*, from *circa* 300 A.D. onwards. The first period is one of increasing development and expanding civilization, connected chiefly with the progress of Buddhism, which was introduced about 247 B.C. The second period is one of ever-increasing pressure from the Tamils, Pandyans, and Cholas from India, with occasional success on the part of the Sinhalese, particularly during the reign of their famous king, Parakrama Bahu I. (1153 to 1186 A.D.).

Annual averages (in inches) are shown to the right of the name of each station.

Block by Survey Dept. Ceylon.

A natural limit occupation resulted from the constant warfare, and the Tamils known as Jaffnese were left in possession of the north of the Island.

In the sixteenth century the Portuguese formed settlements on the coasts of the Island; in the next century they were dispossessed by the Dutch. The Portuguese must be credited with the introduction of Catholic Christianity in the Island, and the Dutch with the introduction of Roman law. The impression made by the latter on the social customs of the Ceylonese remains to this day. More recently commerce has brought about a peaceful invasion of Moors, officially styled Muslims, and Malays who are found in large numbers especially in Hambantota, and are reckoned to be the backbone of the Police force. In 1796 the British took possession of the Dutch settlements in the Island, which were then annexed to the Presidency of Madras, but five years later, in 1802, Ceylon was constituted a separate Crown Colony. In 1815, the districts of the interior, which had maintained their independence under the kings of Kandy, were acquired by Great Britain as the result of a rebellion against the Kandyan king, and the whole Island was thus united under the British rule.

Principal Languages.

Sinhalese and Tamil are the two chief vernacular languages in the Island, the former being spoken by the Sinhalese who chiefly inhabit the western, central, and southern portions of the Island, and the latter by the Tamils inhabiting the northern and eastern parts and by the immigrant estate population. English is in general use among the people of the upper and the middle classes of all communities.

CHAPTER II.

Government.

The Constitution.

Until 1931 the Constitution of Ceylon was of the Crown Colony type, the government being vested in the Governor assisted by Executive and Legislative Councils. A description of the old Constitution will be found in the Annual General Reports of 1929 and previous years.

In July, 1931, the then existing Constitution was superseded by a new Constitution, based on the recommendations of a Special Commission on the Constitution appointed by the Secretary of State for the Colonies, which visited Ceylon in 1927–28. The new Constitution was formulated by the Ceylon (State Council) Order in Council, 1931. The principal constitutional changes involved are described below.

The Legislative Council was dissolved in April, 1931, the Executive Council in July of the same year, and their place was taken by a "State Council" having both legislative and executive functions, which met for the first time on July 7, 1931. The new Council consists of three official members, fifty elected members, and not more than eight members

nominated by the Governor. Neither an elected nor a nominated member may be a person holding any public office under the Crown in Ceylon.

The three official members of the State Council are styled the Officers of State. They are members of the Council *ex officio*, as the Chief Secretary, Legal Secretary, and Financial Secretary to the Government respectively. The Constitution provides that they shall have all the rights and privileges of membership of the Council and of the Board of Ministers (a body which will be referred to later), save the right to vote on any question before the Council or the Board.

All elected members are elected on a territorial basis, communal representation which was a feature of the old legislature having been abolished. The franchise is very wide. It extends, with a few exceptions, to all British subjects of either sex who are, at least, twenty-one years of age and are domiciled in Ceylon. In addition, persons not so domiciled are permitted to vote if they possess a certain literacy and property qualification, or have received a "certificate of permanent settlement" from a Government Agent or Assistant Government Agent.

Eight additional members are nominated by the Governor after a general election, the object of their appointment being, in the words of the Special Commission,* "to make the State Council more generally representative of the national interests".

On the first assembly of a new Council, and after the election of a Speaker, the members proceed by secret ballot to divide their total number (excluding the Speaker and the Officers of State) into seven standing committees styled "Executive Committees", which are required to be as nearly as possible equal in number of members†. Each Committee is charged with the administration of one of seven groups of subjects and functions specified in the Order in Council under the following headings :—

I. Home Affairs.
II. Agriculture and Lands.
III. Local Administration.
IV. Health.
V. Labour, Industry and Commerce.
VI. Education.
VII. Communications and Works.

After the election of the Executive Committees, each Committee proceeds to elect by secret ballot a Chairman, and the Chairman-elect of each Executive Committee is then appointed by the Governor as Minister for the group of subjects and functions which his Committee has to administer. It is within the discretion of the Governor to decline to appoint as Minister any member elected Chairman of an Executive Committee. Subjects and functions not allocated to Executive Committees are divided by the Order in Council into three further groups, one of which is placed in the charge of each of the Officers of State, who have no Executive Committees associated with them in the administration of these groups.

* Page 101 of the Report of the Commission.
† The members subsequently elected as Deputy Speaker and Deputy Chairman of Committees cease upon their election, to be members of Executive Committees.

Copyright Photograph *Lionel Wendt.*

"AT THE RECEIPT OF CUSTOM."

The duties of Executive Committees may be summarized as follows :—

(*a*) Preparation of the annual estimates of expenditure of the departments under their control, for submission to the Board of Ministers.

(*b*) Similarly, the preparation of supplementary estimates.

(*c*) Consideration of executive business relating to their own subjects and functions, whether laid before them by their Chairmen or by private members, or referred to them by the Council or the Board of Ministers.

(*d*) Consideration of proposed legislative measures falling within their scope.

The decisions of Executive Committees which are of sufficient importance to require the approval of the Council are submitted at meetings of the whole Council in the form of reports, which the Council may accept or reject, or refer back to the Committee, but *may not amend*. A report accepted by the Council is submitted to the Governor by the Speaker for ratification. But the decisions of Executive Committees in financial* matters are submitted by the Committees to the Board of Ministers, and by the Board to the Council.

The Board of Ministers consists of the three Officers of State and the seven Ministers, but, as stated above, the Officers of State have not the right to vote on questions before the Board. The Chief Secretary is *ex officio* Chairman of the Board, and there is also a Vice-Chairman, elected by the Board from among the Ministers, who is the representative of the Board in the Council and is styled the Leader of the State Council. The most important function of the Board of Ministers is the preparation of the annual estimates of revenue and expenditure for the Island, and of supplementary estimates of expenditure. The annual and supplementary estimates of the different departments of Government are submitted by the Officers of State and Executive Committees to the Board, whose duty it is to revise them and, if and when approved, to submit them to the State Council, taking full and collective responsibility for them. No financial* measure may be introduced in the State Council except by an Officer of State or a Minister, and with the approval of the Board of Ministers. The Board of Ministers also determines the order in which any business, whether executive or legislative, to be brought before the Council either by the Board or by the Executive Committees or Officers of State, is to be despatched, and prescribes the procedure for the settlement of questions affecting more than one Executive Committee.

The ordinary life of a Council is four years. But the Constitution provides that the Governor may dissolve the Council at any time, and shall dissolve it if the whole of any Annual Appropriation Bill is rejected, or if the decision of the Council on a financial* measure, or on a motion expressly directed to test the confidence of the Council in the Board of Ministers, makes it apparent, in his opinion, that the Board no longer retains the confidence of the Council. Up to the time of writing a dissolution has never occurred. In certain circumstances the life of the Council may be prolonged. It was prolonged beyond its 4-year term in July, 1935, principally on the ground that a new Council would not be able to

* As defined in Article 57 of the Order in Council.

deal adequately with the Budget framed by the old Council and which was not discussed and passed till September, 1935. The general election was held in February, 1936, and the new Council came into being on March 17, 1936.

* The Governor retains the power to certify any Bill, motion, resolution, or vote as being of paramount importance, or he may declare that it is essential to give effect to the provisions of the Order in Council. In either event the measure has effect as if it had been passed by the Council, subject to disallowance by His Majesty the King in the case of Bills and to revocation by the Secretary of State in the case of other measures.

† Power is also reserved to the Governor to declare that a state of emergency exists, and thereupon to assume control of any Government department.

The appointment, promotion, transfer, dismissal, and disciplinary control of public officers are vested in the Governor (with power of delegation to heads of Government departments), and the Order in Council contains clauses for the preservation of their conditions of service.

For full details of the Constitution, reference may be made to the Order in Council, which is reproduced in the Ceylon Government Manual of Procedure.

The Ceylon Civil Service.—The Ceylon Civil Service, recruited partly by examination on the same basis as the Indian Civil Service, and partly by local appointments, furnishes officers for the general administrative, and part of the judicial, work in the Island.

Revenue Districts.—For administrative purposes Ceylon is divided into nine Provinces, which are subdivided into districts, as shown in the following table :—

Provinces.	Districts.	Provinces.	Districts.
Western	.. Colombo, Kalutara	North-Western	.. Kurunegala, Puttalam-Chilaw
Central	.. Kandy, Matale, Nuwara Eliya	North-Central	.. Anuradhapura
Southern	.. Galle, Matara, Hambantota	Uva	.. Badulla
Northern	.. Jaffna, Mannar, Mullaittivu	Sabaragamuwa	.. Ratnapura, Kegalla
Eastern	.. Batticaloa, Trincomalee		

The Government Agents.—The posts of Government Agents—one in each of the nine Provinces—are held by senior Civil Servants. To the Government Agents is entrusted the general administrative work of their Provinces, while their Kachcheries, or offices, are the provincial treasuries for the receipt of revenue and the payment of the local expenses of Government.

The Government Agents hold a number of other official positions, and preside over some local bodies in their Provinces. They are, as a rule, assisted by one or more Assistant Government Agents, who are in charge of revenue districts or else perform special duties at the provincial headquarters.

The Headmen.—The officer next subordinate to the Government Agent or Assistant Government Agent is the chief headman, who is differently styled in different districts : " Mudaliyar " in the maritime Sinhalese districts ; " Ratemahatmaya " in the Kandyan districts ; " Maniagar ", " Adigar ", and " Vanniya " in the Tamil districts. There are about 104 chief headmen in the Island. In some cases the Mudaliyar is assisted by one or more " Muhandirams ". Next to the chief headman

* Article 22 of the Order in Council. † Article 49 of the Order in Council.

Photo by Werner Conitz. *Courtesy Govt. Tourist Bureau.*

SEA-BATHING AT MOUNT LAVINIA.

ranks the superior headman, called in the maritime Sinhalese districts " Vidane Arachchi ", in the Kandyan Sinhalese districts the " Korala ", and in the Tamil districts the " Udaiyar ". There are about 610 superior headmen in Ceylon.

Lastly comes the village headman, who is in charge of one or more villages, and whose jurisdiction is the administrative unit. The number of village headmen is about 3,800. In addition, there are peace officers, irrigation headmen, and others appointed for special purposes. A Commission was appointed in 1934 to inquire into and report on the working of the existing Headmen System with a view to its improvement or replacement partly or wholly by any other system. The Commission's report is contained in Sessional Paper XXVII. of 1935. This report was reviewed by the Home Committee in 1936. Its recommendations have been debated by the State Council.

Local Government.

With the inauguration of a new Constitution for the Island in July, 1931, an Executive Committee of Local Administration was elected by the State Council to supervise, control, and develop local government, and a department of local government under the Commissioner of Local Government was created as the executive instrument of the Committee.

The local duties in regard to sanitation and public thoroughfares have for long been entrusted to a number of local authorities whose members are the nominees of the Governor with the addition in most cases of persons elected by the inhabitants. In Colombo there is a reformed Municipal Council, whose members (of either sex) are now elected by the ratepayers resident within the limits of any ward and owing or occupying property in respect of which an annual rate of not less than Rs. 10 is paid, and whose Mayor is elected annually from among the Councillors. In Kandy and Galle, there are Municipal Councils whose Chairmen are members of the Civil Service. At least half the members are elected by the ratepayers, all those possessing a house of the annual value of Rs. 180, or every tenant who pays a monthly rental of Rs. 15 or is a graduate of a university being qualified to vote.

Until the end of 1932 in eleven of the smaller towns there were Urban District Councils with elected Chairmen, two-thirds of the members being elected by the ratepayers and one-third being nominated by the Governor. No further Councils were constituted in the absence of a local demand. On the recommendation, however, of the Executive Committee, 16 more such Councils were established from January 1, 1933, in place of 10 of the Local Boards of Health and Improvement, in 5 of the small towns previously administered by Sanitary Boards, and also in place of the Board of Improvement of Nuwara Eliya.

Only one small town is now administered by a Local Board of Health and Improvement, viz., Minuwangoda, as it is too small to support an Urban District Council. The Government Agent of the Western Province is the Chairman. The members are the District Engineer, the Medical Officer of Health, and 3 elected members.

Groups of smaller towns, frequently no larger than roadside bazaars, are administered by the Sanitary Boards of the various districts, consisting of the Government Agent, or Assistant Government Agent, two local officials of the Public Health Department and the Public Works

Department, and not more than four nor less than two members nominated by the Governor. This method of local administration for a number of towns in a district is carried on from the District Headquarters with a staff consisting partly of officers whose salaries are met proportionately by the various towns and partly of officers lent by the Public Health Department. This cheap and reasonably efficient form of local administration is, however, now said to be out of favour because the Boards contain no elected members. The Executive Committee is not recommending the inclusion of any further towns in the administration of these Boards, and has under consideration some other form of administration of a more popular type.

In the rural areas, there are Village Committees for groups of villages. These groups are divided into wards, each of which elects one member. In 1932 an Ordinance was passed precluding officials from being elected as Chairman. These Committees deal with minor local affairs and the working of rules connected with local customs.

Roads other than main thoroughfares and other than those in charge of the local authorities mentioned above, are maintained by District Committees, while certain educational matters have been entrusted to District Education Committees.

CHAPTER III.

Population.

Population.—Population data are collected, as in almost every other country, by means of a Census, which is taken decennially in Ceylon. The last decennial Census was taken on February 26, 1931, but its scope was limited owing to the financial crisis. At that Census Ceylon had (inclusive of the military and the shipping) a population of 5,312,548 which was 17·9 per cent. more than that in 1921. Since 1871 when the first decennial Census was taken the population has steadily increased. The Island is fairly thickly populated; and at the last Census it had a density of 210 persons per square mile and ranked above India, France, and Denmark, and somewhat below Japan.

Statistics of races were not collected in 1931 except in the Colombo Municipality and on the estates, but rough estimates based on the Census of 1921 are given below :—

Race.	Colombo. Town.	Estates.	Estimates for Other Areas.	Estimated Total.
Europeans	3,340	2,814	2,999	9,153
Burghers and Eurasians	15,887	2,031	14,397	32,315
Sinhalese	127,927	75,786	3,269,317	3,473,030
Tamils	65,704	698,081	653,692	1,417,477
Moors	44,240	7,496	274,177	325,913
Malays	7,022	1,988	6,967	15,977
Others	20,035	1,738	10,791	32,564
	284,155	790,376*	4,232,340	5,306,871*†

It is estimated on the same basis that there were 3,267,457 Buddhists, 1,158,522 Hindus, 523,066 Christians, 356,888 Muslims, and 938 others at the Census of 1931.

* Includes 442 persons of unspecified race.
† Excludes the military and the shipping.

REPORTED BIRTH, DEATH AND MARRIAGE RATES,

CEYLON.

Reproduced and Printed by Survey Dept. Ceylon
17. 6. 38.

The population (exclusive of the military and the shipping) was geographically distributed in 1921 and 1931 as follows :—

	1921.	1931.	Percentage of Increase.
Western Province	1,246,847	1,445,034	15·9
Central Province	717,739	953,388	32·8
Southern Province	671,234	771,204	14·9
Northern Province	374,829	398,874	6·4
Eastern Province	192,821	212,421	10·2
North-Western Province	492,181	546,966	11·1
North-Central Province	96,525	97,365	·9
Province of Uva	233,864	303,243	29·7
Province of Sabaragamuwa	471,814	578,368	22·6
Miscellaneous Population*	751	8	—

Intercensal estimates of population are prepared from the records of vital statistics and of migration, and on this basis the Island had a population of 5,780,000 at the end of 1937.

The figures for Ceylon quoted above do not include those of the Maldive Islands which had a population of 79,281 at the Census of 1931, as compared with 70,413 in 1921.

Migration.—The large majority of the migrants move to and from India ; and a considerable part of them are Indian labourers. In 1937 the total number of immigrants to the Island was 188,054. Of them 161,944 or 86 per cent. were from India and 51,427 of these were estate labourers.

Of the total 178,471 emigrants in 1937 about 87 per cent. or 155,177 left for India ; and of these 47,924 were estate labourers.

The migration statistics of 1933 to 1937 are as follows :—

	Arrivals.				Departures.			
	From India.				To India.			
	Indian Labourers.	Others.	From Other Countries.	Total.	Indian Labourers.	Others.	To Other Countries.	Total.
1933	32,898	88,661	14,498	136,05[illegible]	46,626	134,524	13,077	194,227
1934	140,607	104,813	14,383	259,80[illegible]	52,481	97,919	14,869	165,269
1935	43,018	104,206	14,259	161,48[illegible]	43,036	112,667	13,641	169,344
1936	40,803	97,341	15,761	153,905	41,721	105,567	14,582	161,870
1937	51,427	110,517	26,110	188,054	47,924	107,253	23,294	178,471

Marriages.—Three Marriage Ordinances operate in the Island, one for the general population, one for the Kandyans, and one for the Muslims. Under the General and Kandyan Marriage Ordinances 30,876 marriages were registered in 1937, as against 26,779 in 1936, and an annual average of 26,977 during the preceding decade. The General marriages alone numbered 24,140, and were 2,806 more than in the previous year. The number of persons married during the year was 11·6 per 1,000 of the General and Kandyan population, as against 10·2 in 1936, and 10·9 the average during the decade ending 1936. Among the Muslims 3,882 marriages were registered 2,333 more than in the previous year and 2,684 more than the annual average during the decade 1927–1936. The Muslim marriage rate was 20·2 per 1,000 during the year, as compared with 8·2 in 1936 and 6·6 the average for the ten years ending 1936. The increase in Muslim marriages was due to the operation of the Muslim marriage and Divorce Registration Ordinance, No. 27 of 1929, which came into operation on January 1, 1937.

Divorces.—Dissolution of any marriage registered under the General Marriage Ordinance can be granted only by a District Judge and under the Kandyan Marriage Ordinance by a Provincial or Assistant Provincial Registrar. In 1937 there were 138 dissolutions of General and 690 of

* Persons enumerated in trains and in the Great and Little Basses.

Kandyan marriages, as compared with 131 and 710 respectively in 1936. There is usually a large excess of Kandyan marriage divorces over General marriage divorces, largely due to the greater facilities for divorce afforded by the Kandyan marriage law. Muslim marriage divorces are now registered under the Muslim Marriage and Divorce Registration Ordinance, No. 27 of 1929, and there were 450 such divorces registered in the year 1937.

Births.—216,072 births were registered in the Island in 1937, as against 192,060 in the previous year and 202,079 the average of the decade 1927–1936. Of these, 110,228 were males and 105,844 females, representing a sex proportion of 1,041 males to 1,000 females, 2 more than in 1936. The birth rate was 37·8 per 1,000 of the population, as compared with 34·1 in 1936 and 37·9 the average rate for the decade ending 1936. The birth rate of the Island is comparatively high.

Deaths.—The deaths of 124,210 persons (63,335 males and 60,875 females) were registered in 1937, as against 123,039 in 1936 and 131,204 the average for the decade 1927–1936. The death rate was 21·7 per 1,000 of the estimated population, as compared with 21·8 in the previous year and 24·5 the average for the previous decade.

Infant Mortality.—The deaths of 34,180 infants under one year of age were registered in 1937. The infant mortality in 1936 was 31,789 and the average for the decade 1927–1936 was 35,851. About 28 per cent. of the total deaths in 1937 were those of infants. The infant death rate was 158 per 1,000 births registered, as compared with 166 in 1936 and 178 the average for the ten years 1927–1936.

Causes of Death.—Since 1911 causes of deaths in this country are classified according to the International or Bertillon System. The classification from 1933 was according to the fourth revision of the international list. Owing to the absence of compulsory certification of causes of deaths among a very large section of the population, the statistics, particularly of diseases requiring scientific knowledge for diagnosis, are not absolutely accurate; but there is reason to believe that a definite, though slow, progress in accuracy is achieved every year. The death rate per million of the estimated population from the more important diseases registered in Ceylon in 1936 and 1937 are shown below :—

Causes.	Rate per Million.		Causes.	Rate per Million.	
	1936.	1937.		1936.	1937.
Pyrexia ..	2,578	2,437	Influenza ..	281	366
Convulsions (under 5 years)	2,011	2,103	Dysentery ..	394	344
Pneumonia and broncho-pneumonia ..	1,717	1,927	Ankylostomiasis ..	327	299
Diarrhoea and enteritis ..	1,265	1,222	Puerperal septicaemia ..	7·9*	6·7*

CHAPTER IV.

Health.

Hospitals and Dispensaries.

Medical aid is generously provided by the State, there being 108 Government hospitals and asylums, with provision for 11,977 beds.

* Per 1,000 live births.

Copyright Photograph *Lionel Wendt.*

NET MENDING.

In Colombo are situated a General Hospital with 935 beds, an Ophthalmic Hospital, a Lying-in Home, a hospital for women (Lady Havelock Hospital), a hospital for children (Lady Ridgeway Hospital), a Bacteriological Institute, a Pasteur Institute, and a Dental Institute. At Angoda, 6 miles from Colombo, there is a hospital for infectious diseases, with 168 beds. There are special dispensaries at Kandy, Galle, Jaffna, Batticaloa, and Badulla for the treatment of eye diseases and a clinic at Galle for dental treatment. Treatment with radium is available at the General Hospital, Colombo. A dental van is available to give dental service to other areas.

There is a Lunatic Asylum at Angoda, 6 miles from Colombo, with 1,930 beds and two Leper Asylums, one at Hendala in the Western Province and one at Mantivu in the Eastern Province with 688 beds.

There is a Home for Incurables at Colombo, with 90 beds, which is administered by a Committee of Government officials and representatives of the public.

For the treatment of tuberculosis, there are the King Edward VII. Memorial Anti-Tuberculosis Institute in Colombo, a Hospital Sanatorium of 349 beds for moderately advanced cases that would benefit by treatment at Ragama, and a Sanatorium of 72 beds at Kandana, and one of 44 beds at Kankesanturai on the northern coast.

In addition to Government hospitals, the owners of estates have provided 92 estate hospitals, and in consequence receive a rebate on the export duty on tea, rubber, coffee, cacao, and cardamoms.

Besides the hospitals there are 683 central and branch dispensaries and visiting stations provided by Government. There are also 723 estate dispensaries, which receive free drugs from Government to the value of 50 cents per labourer per annum.

Campaigns.

Campaigns for the control of malaria, ankylostomiasis, leprosy, smallpox, filariasis, and parangi are carried out in the field apart from treatment afforded at hospitals and dispensaries.

Mass treatment against ankylostomiasis is carried out by Medical Officers, Medical Officers of Health, Field Medical Officers, and School Medical Officers in their respective areas with the assistance of trained dispensers. This has resulted in a marked decrease in the number of patients admitted to hospitals for this complaint.

A good deal of success has been achieved in the control of parangi (yaws). The work is done by Medical Officers of Health and Field Medical Officers as part of their general work and by 2 special wholetime Itinerating Medical Officers who look after areas not under the former. With the larger personnel available, an intensive control campaign is in operation to comb out villages for cases of the disease, place them on cards, treat them, follow them up six monthly and to watch contacts.

In the control of leprosy a special survey of the Island is in progress. As each province is completed, treatment and observation are provided for and those in the infectious conditions segregated. So far the Eastern, Western, Southern, Sabaragamuwa and part of the North-Western Provinces have been completed.

In addition to special trained Vaccinators, Sanitary Assistants, and Public Health Nurses carry out vaccinations against smallpox, under

the supervision of Medical Officers of Health and Field Medical Officers. Primary vaccination is compulsory but secondary vaccination is compulsory only during outbreaks of smallpox.

A special survey of filariasis in the Island is being carried out. So far the North-Western Province has been completed and the Southern Province has been taken up.

Anti-Malarial Work.

Anti-malarial work carried out by the Department of Medical and Sanitary Services is under the control of a Departmental Committee with the Assistant Director of Sanitary Services as Chairman and the Superintendent, Anti-malaria Campaigns, Medical Entomologist, Sanitary Engineer, and the Senior Medical Officer as members.

The Superintendent, Anti-malaria Campaigns, is in charge of Campaign centres, the Sanitary Engineer carries out schemes of anti-malaria drainage while the Medical Entomologist investigates problems connected with malaria incidence and checks the efficiency of anti-larval measures.

Intensive anti-malaria work is carried out in the malarious town areas of Chilaw, Kurunegala, Anuradhapura, Trincomalee, Puttalam, and Badulla, along certain sections of the railway and at Minneriya.

Quinine is exclusively made available free of charge throughout the Island at hospitals and dispensaries as well as at village distribution centres.

As a result of the unprecedented malaria epidemic which started at the end of 1934 and which caused much havoc to Ceylon, a scheme for malaria control and health work has been organized under Field Medical Officers each of whom is placed in charge of an area comprising a population of about 40,000, and carries out work embracing the following :— anti-malaria work, maternity and childwelfare work, school health work, mass hookworm treatment, supervision of dispensaries, holding of special clinics, control of communicable diseases, health propaganda and general sanitary work. The areas included at present in the new scheme of malaria control and health work are the North-Western Province, Province of Sabaragamuwa, Kandy and Matale Districts of the Central Province, the major portion of North-Central Province, Matara and Hambantota Districts of Southern Province, Batticaloa District of Eastern Province, and parts of Province of Uva, Western Province, and Northern Province.

Sanitary Engineering Division.

In addition to malaria drainage, this division deals with questions of general drainage in small towns and of water supplies and disposal of excreta.

Estate Sanitation.

Attached to the Department of Medical and Sanitary Services are three Inspecting Medical Officers and two Assistants, who inspect estates throughout the Island. During the year under review 506 estates were inspected. In the course of inspection, defects in the sanitary condition of estates are pointed out and suggestions to remedy and prevent them in future are put forward to the estate owners. Year by year the housing and the sanitary conditions on estates are improving.

Copyright Photograph *Lionel Wendt.*

BEACHING AN OUTRIGGER CANOE.

Public Health.

In addition to the Inspecting Medical Officers, there were in 1937, 23 Medical Officers of Health and 55 Field Medical Officers assisted by 298 Sanitary Assistants who looked after the sanitary requirements of urban and rural areas. The areas assigned to Medical Officers of Health and Field Medical Officers are so restricted in size and population as to be looked after conveniently by one Medical Officer. In these areas a staff of Sanitary Assistants, Public Health Nurses, and midwives is provided and work is carried out intensively, every type of public health work needed being done. In a few areas the extent of district and population are great, and only Sanitary Assistants, not sufficient to deal with the whole population are employed. Sanitary work in the limited areas looked after by Sanitary Assistants is done on the same lines as in the intensive areas.

At Colombo, Kandy, Galle, Jaffna, Kalutara Totamune, Panadura Totamune, Matara Gravets, Wellaboda Pattu, and the Colombo Mudaliyar's division, school health work was carried out by nine whole-time School Medical Officers and eight School Health Nurses. Schools in other areas are dealt with by the Medical Officers of Health and Field Medical Officers in their respective districts as part of the general health work.

Legislation.

A draft Anti-Mosquito Ordinance and an amending Ordinance of the Lunacy Ordinance, 1873, are in hand.

Infectious Diseases.

Plague.—The following cases and deaths occurred in Ceylon during 1937 :—

Locality.	Cases.	Deaths.
Western Province—		
Colombo Municipality	27	27
North-Western Province—		
Ihala Hattiniya	1	1
Central Province—		
Talawakele	1	1
	29	29

During the year 1936 there were 57 cases with 46 deaths. The fatality rate was 100 per cent. in 1937 and 80·7 per cent. in 1936.

Western Province.

Colombo Municipality.

In Colombo there was a rat epizootic and 48 infected rats were detected.

Rat plague continued to be enzootic in the city as in previous years. 32,375 rats were examined at the Municipal Laboratory and 48 or 0·12 per cent. were found infected, as against 0·14 per cent. in 1936. Three infected rats were sent from the Chalmers Granaries.

Rat Destruction.—"Calcid" cyanide fumigation was started by the Municipality during the year under review and the number of rats destroyed was as follows :—

By fumigation	10,474
„ labourers	1,805
„ trapping gang	112,396
	124,675

The type of disease among human beings infected in Colombo during the past three years was as follows :—

	1935.		1936.		1937.	
	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.
Bubonic	37	33	32	26	20	20
Septicaemic	20	20	7	7	7	7
Pneumonic	—	—	—	—	—	—
	57	53	39	33	27*	27

* This is the lowest figure for any year with the exception of the years 1926 and 1933 which had 13 and 26 cases respectively.

Of the 27 cases in 1937, 24 were males and 3 females. The months of January, February, and March had the largest number of cases, viz., 18.

North-Western Province.

Ihala Hattiniya.

The case of plague occurred in a Sinhalese cultivator of Ihala Hattiniya, a village one and half miles north of Marawila. The dates of onset and death of this case were 24th and 25th May, respectively. The source of infection could not be traced, but there was no evidence of rat infection in the area. It was a case of the septicaemic type.

Central Province.

Talawakele.

This case of plague occurred in a Sinhalese boutique employee at No. 138, Pundaluoya road, Talawakele. The dates of onset and death were 29th May and 6th June respectively. The source of infection could not be traced but there was no evidence of rat infection in this area. It was a case of the septicaemic type.

Smallpox.—There were 2 cases, both of which recovered. There were 3 cases with 3 deaths in 1936 and 115 cases with 15 deaths in 1935.

Distribution of cases.—Both these cases were among new arrivals from India. One of the victims was an American tourist, who developed the disease at the Grand Oriental Hotel, Colombo, and the other an Englishman engaged as a Mechanic in the Chinanwadi Naval Tank works at Trincomalee.

Both the cases were of the confluent type. The victims had been vaccinated prior to the onset of the disease.

Cholera.—The Island was free from this disease during the year under review. There were 49 cases with 44 deaths giving a fatality rate of 89·8 per cent. during 1936 and 30 cases with 22 deaths in 1935, and one case with one death in 1934.

"MISS CEYLON, 1937."

CHAPTER V.

Housing.

A. *Municipal Towns.*—There are three Municipal towns in Ceylon, viz., Colombo, Kandy, and Galle. Of these, Colombo with a population of about 308,100, is much the largest. New houses in these towns may only be built in accordance with the provisions of the Housing and Town Improvement Ordinance of 1915, which prescribes certain minimum hygienic requirements. But there are numerous insanitary houses built prior to the Ordinance which can only gradually be converted into sanitary buildings as they fall into disrepair. The Colombo Municipal Council began a scheme of housing its own direct labourers in 1923 and a definite yearly programme of providing tenements for them has been followed since that year. In 1931 the Council also embarked on a programme of slum eradication at Kochchikade which, when completed, will rehouse about 2,000 people.

In Kandy, which has a population of about 39,900, the first organized attempt at slum clearance began in 1920 following an outbreak of plague. Seventy-five per cent. of the slums have since been dealt with and replaced by sanitary tenements or houses of a better type. Model tenements have been built by the Council in various parts of the town which now house about 2,500 persons. Forty-two insanitary tenements were closed in 1937 and their inhabitants were for the most part given model dwellings erected by the Council. Lines are also being built for the Council's labourers. A start has also been made in Kandy in providing " back lanes " for the congested areas of the town. These lanes facilitate conservancy and scavenging and also provide more light and air for the houses in their neighourhood.

In Galle, which has a population of about 38 100, action has been mainly directed towards the improvement and demolition of insanitary and dangerous buildings under the provisions of the Housing and Town Improvement Ordinance, each ward of the town being taken up in turn. Steps taken to prevent overcrowding of houses and tenements were relaxed during 1937 owing to hardships experienced by some of the public by such measures.

B. *Other Towns.*—The other towns of the Island which are under the administration of Urban District Councils or Sanitary Boards are also subject to the Housing and Town Improvement Ordinance. But in most of them only a minority of the existing buildings is in conformity with modern sanitary requirements. A gradual improvement, however, is being effected as the older buildings collapse and have to be rebuilt. Few of the local bodies concerned are in a financial position to embark on schemes of tenement building.

C. *Rural Areas.*—In the rural areas most of the houses are built with wattle and mud walls and roofs thatched with straw or cadjans. Village Committee rules usually prescribe certain elementary sanitary measures, *e.g.*, that a dead body may not be buried within a certain minimum distance of a dwelling-house or that every house must have its walls whitewashed at least once a year. Otherwise housing conditions in the rural areas are free from control.

On the larger tea, rubber, and coconut estates housing accommodation for the labour force is usually provided by the estate proprietors, is inspected periodically by officers of the Medical and Labour Departments, and is generally much superior to that found in the surrounding villages.

CHAPTER VI.

Natural Resources.

General.—The main crops of the Island are coconut, paddy, tea, and rubber. Other crops which are grown to less extents are : cacao, cinnamon, citronella, arecanut, cardamoms, and tobacco.

Chena cultivation, that is, the growing of crops on jungle land newly cleared by burning, is an important feature of peasant agriculture in the sparsely populated areas of the dry-zone.

Animal husbandry was formerly a negligible factor in the agricultural economy of Ceylon, but interest in this branch has now been awakened, and the foundations of stock raising and dairy industries are being assiduously laid.

The extent of production of the several crops may be gauged from the following tables which give the approximate acreages under cultivation and the quantities of produce exported and their value in 1937 :—

Acreages under the Chief Crops (estimated only).

	Acres.		Acres.
Coconuts	1,100,000*	Palmyra	50,000‖
Rice	850,000†	Cacao	34,000‖
Rubber	605,152‡	Citronella	33,000‖
Tea	559,237§	Cinnamon	26,000‖
Chenas, vegetable, and other crops	140,000‖	Tobacco	14,000‖
Arecanuts	69,000‖	Cardamoms	6,000‖

Exports of Agricultural Products of the Island in 1937.

	Quantity.	Value. Rs.¶	Total Value of Class. Rs.¶

Tea.

Acreage, &c.—Over 559,000 acres are planted in tea, *Thea sinensis*, consisting of 2,363 estates and 68,068 small holdings. It is grown at elevations varying from sea level to 6,000 feet above sea level. The better quality teas are grown at the higher elevations.

The manufactured product consists of the young tender shoots which after plucking undergo the processes of withering, rolling, fermenting, and drying or firing.

Rainfall.—A fairly evenly distributed rainfall of 80 to 120 inches a year is required for tea.

Labour.—About 95 per cent. of the labour on tea estates consists of immigrant labour from India. An estate requires on an average about 1⅛ labourer per acre.

Research.—A scientific staff is maintained by the industry which is supported by a cess on exports for the purpose of investigating the scientific side of the growth and manufacture of tea.

Yields.—Yields vary considerably according to elevation, cultivation, &c., but may be said to range from 300 to 1,200 lb. made tea per acre.

Factory.—The principal machinery required consists of tea rollers, roll breakers, shifters, &c., and dryers. Suction gas engines are the usual source of power.

Preparation for Export.—Tea is exported in metal lined wooden packages. It is usually blended and packed in packets before it actually reaches the consumer's hands.

Restriction.—In May, 1933, an Ordinance to control the export of tea was passed by the State Council as a part of a joint scheme for the regulation of the export of tea from the main producing countries. The Ordinance is to be operative for a period of five years. For the second year of assessment which ended on March 31, 1935, Ceylon's exportable quota was fixed at 220,082,290 lb. being 87½ per cent. of the total exports of tea from the Island, in 1929. For the year ended March 31, 1936, Ceylon was allowed to export 207,506,160 lb., the same amount was allowed for the year ended March 31, 1937. For the year ending March 31, 1938, Ceylon is allowed to export 220,082,290 lb.

Prices.—The average price of total offerings for the year was 76 cents per lb. as against 67 cents per lb. in 1936.

High-, medium-, and low-grown were higher than 1936 by 6, 11, and 11 cents, respectively.

The monthly average prices at the local weekly sales during 1937, compare as follows :—

(Per lb.)

	Rs. c.		Rs. c.		Rs. c.
January .	.. 0 75	May ..	.. 0 78	September	.. 0 76
February	.. 0 79	June ..	.. 0 72	October	.. 0 76
March ..	.. 0 81	July ..	.. 0 76	November	.. 0 74
April ..	.. 0 78	August .	.. 0 77	December	.. 0 71

Coupon prices ranged from 35 cents to 48¾ cents during the year under review.

The annual average market prices* in certain years were :—1925, 96 cents per lb. ; 1926, 99 cents ; 1927, 94 cents ; 1928, 85 cents ; 1929, 81 cents ; 1930, 75 cents ; 1931, 57 cents ; 1932, 42 cents ; 1933, 54 cents ; 1934, 66 cents ; 1935, 64 cents ; 1936, 67 cents ; 1937, 76 cents (see Diagram No. 5).

* According to local weekly sale averages.

3——J. N. 77053 (8/38)

Rubber.

Acreage, Elevation, and Rainfall.—The acreage under rubber in the Island is 605,152 acres. The rubber tree cultivated in Ceylon (*Hevea brasiliensis*) flourishes at elevations below 2,000 feet and requires a well distributed rainfall of not less than 80 inches per annum. It is cultivated to varying extents throughout the Island, chiefly in the Province of Sabaragamuwa and in the Western, Central, and Southern Provinces.

Latex.—Rubber is the coagulated latex of the rubber tree obtained by tapping the trunk. The latex running from the cut—usually half the circumference—is collected in cups, removed to the factory, treated with acetic or formic acid to cause coagulation, crêped by machinery, and dried or coagulated in sheets and smoked.

Planting.—Rubber is generally propagated from seed which is sown in nurseries, and, when the nursery plants are eighteen months to two years old, they are removed, have their tops and main roots cut back, and are planted into the new clearings as " stumps ".

Budding of Rubber.—Continued interest was shown by estates in the subject of replanting with budgrafted trees of proved high yielding clones, but although the number of estates undertaking such work is considerable it would appear from the figures up to the end of 1937 that the total area replanted during the 5 year period of control will be far short of the 20 per cent. permitted under the Ordinance.

Some of the areas planted with imported clones in the years 1930–31 became tappable during 1937, and although in view of the restriction of output not many estates have commenced to tap such areas commercially a considerable amount of experimental tapping of small groups of trees has been undertaken. The early results show great promise and indicate that the imported clones are likely to give as high yields in Ceylon as in the countries of origin.

Experimental tapping of local clones established from high yielding trees on estates has continued at the Rubber Research Scheme Experiment Station and on estates, and we are now reaching the stage at which the best of such clones can be recommended for commercial planting.

Cultivation.—The best time for cultivation is considered to be just before the wintering commences. Artificial manures are all used. Cover plants are used for soil conservation.

Restriction.—In May, 1934, an Ordinance to control the export of rubber was passed by the State Council as a part of a joint scheme for the regulation of the export of rubber from the main producing countries. The Ordinance is to be operative for a period of five years. The Ceylon quota of export for any period of control will be the quantity of rubber named as the basic quota for that period or such percentage of that basic quota as shall be declared by His Excellency the Governor by notification in the *Government Gazette*.

The basic quota for the five years is as follows :—

	Tons.		Tons.
1934	77,500	1937	81,000
1935	79,000	1938	82,500
1936	80,000		

RAJESWARI—A TAMIL REVERIE.

DIAGRAM No. 6.

AVERAGE WEEKLY COLOMBO PRICES AND

MONTHLY STOCKS OF RUBBER IN UNITED KINGDOM (LONDON AND LIVERPOOL)

FOR THE YEARS 1936 AND 1937

Yield.—The yield per acre varies considerably with the soil, age of the trees, rainfall, planting, treatment, &c., but may be said to range from 150 to 700 lb. per acre, 400 to 500 lb. per acre being considered a good all-round yield for an estate in full bearing.

Prices.—The average price of total offerings for the year was 52 cents per lb. for crêpe and 48 cents per lb. for sheet.

Crêpe and sheet were higher than 1936 by 11 cents and 8 cents, respectively.

The monthly average prices of Ribbed Smoked Sheet (Contract Quality) at the local weekly sales during 1937, compare as follows :—

(Per lb.)

	Rs. c.		Rs. c.		Rs. c.
January .	0 54	May	0 54	September	0 45
February	0 54	June	0 48	October.	0 38
March	0 61	July	0 46	November	0 34
April	0 58	August	0 44	December	0 35

Coupon prices ranged from 20½ cents to 35¼ cents during the year under review.

The annual average market prices* in certain years were the following :—1925, Re. 1·73 per lb. ; 1926, Re. 1·21 ; 1927, 95 cents ; 1928, 55 cents ; 1929, 52 cents ; 1930, 27 cents ; 1931, 14 cents ; 1932, 11 cents ; 1933, 15 cents ; 1934, 31 cents ; 1935, 30 cents ; 1936, 41 cents ; 1937, 50 cents. (see Diagram No. 5.)

Labour.—The labour engaged is composed of Sinhalese and immigrant Indian Tamils. The usual requirement of labour is one labourer to 3 acres of rubber.

Research.—A scientific staff is maintained by the industry and is supported by a cess on exports for the purpose of investigating the scientific side of the growth and manufacture of rubber. Provision for this research work was made by Ordinance No. 10 of 1930.

Coconut.

Acreage, Area, &c.—It is estimated that approximately 1,100,000 acres are planted with coconuts. Along the coast of the Western and Southern Provinces planting has been done very closely and no systematic cultivation is carried out. Here the main product is toddy which is supplied to arrack distilleries ; at the same time the manufacture of coir string and rope is an important subsidiary industry, especially in the hands of women. Elsewhere the coconut is cultivated mainly for the production of copra, and the extraction of oil thereform, as well as the manufacture of desiccated coconut. Cultivation is confined mainly to elevations below 1,500 feet and a well distributed rainfall of 50 to 90 inches is required. The greater part of the acreage lies in the North-Western, Western, and Southern Provinces.

Cultivation.—Cattle manure and artificial manures are used. Young coconuts systematically cultivated and manured come into bearing much earlier than coconuts which are not so treated.

Labour.—The quantity of labour required for a coconut estate is generally worked out at one labourer for 10 acres.

* Averages for top grades only (Ribbed Smoked Sheet and Contract Crepe) at local weekly sales.

Research.—The Coconut Research Scheme, which was established by Ordinance No. 29 of 1928, has its headquarters at Bandirippuwa estate, Lunuwila. It is supported by a grant and a cess on the exports. The Senior Scientific Staff consists of the Technological Chemist who is at the same time Director of Research, the Geneticist and the Soil Chemist. On the junior staff are three technical assistants, two field assistants, the superintendent of the estate, and three clerks. Scientific research is carried out on the breeding and improvement of the coconut palm, manuring and cultivation, and the technology of coconut products. There are well equipped laboratories and a useful library and reading room at Bandirippuwa estate. The third Wednesday in each month is set aside as Visitors' Day. Coconut planters and others interested in the industry are specially invited to make use of the library and reading room, which are open on week days from 9 A.M. to 4 P.M. and on Saturdays from 9 A.M. to 12 noon.

Leaflets and other publications on various aspects of the coconut industry are issued to *bona fide* inquirers who register their names on the Scheme's mailing list.

The nut.—The principal product, from a commercial point of view, is the nut. The yield per palm on a cultivated estate is about 40 nuts per annum. The average yield is probably under 30 nuts per palm, though with cultivation in good districts up to and over 80 may be secured. The number of palms to the acre may vary from 50 to 90, the average being about 70. The palms come into bearing in about six years with intensive cultivation, but more usually take up to ten years. The nuts are generally picked six times a year. They are made into copra upon the estate which produces them, but some small holders sell their nuts to manufacturers. The price rose owing to the increased demand for the manufactured products from Rs. 74 per 1,000 in 1913 to the maximum of Rs. 115 per 1,000 in 1920.

Prices.—The year opened on a slightly more optimistic note, the price being Rs. 65·00 per 1,000 nuts in equal proportions of large, medium, and small delivered to buyers' stores.

The high level of Rs. 70·00 was reached towards the end of January when a break occurred and the market declined to Rs. 53·00 by early February. An advance to Rs. 58·00 followed in the same month but was not maintained, and the market fell away again to Rs. 46·00. Thereafter only minor fluctuations occurred around the following monthly average prices which show the trend of the market for the rest of the year which actually closed at Rs. 34·00.

Average of the monthly quotations recorded by the Ceylon Chamber of Commerce for 1937 :—

(Per 1,000 nuts L. M. S.)

	Rs. c.		Rs. c.		Rs. c.
January	65 13	May	45 0	September	39 50
February	55 75	June	41 75	October	40 10
March	52 17	July	40 70	November	37 38
April	49 75	August	39 50	December	35 25

The annual average market prices in recent years were the following :—1930, Rs. 46·58 per 1,000 nuts L. M. S. ; 1931, Rs. 37·12 ; 1932, Rs. 44·60 ; 1933, Rs. 29·36 ; 1934, Rs. 19·42 ; 1935, Rs. 35·71 ; 1936, Rs. 43·03 ; 1937, Rs. 44·83.

Copyright Photograph *Lionel Wendt.*

A SINHALESE GENTLEWOMAN.

Copra.—The most important manufactured product is copra. This is the dried kernel of the nut, and is used for the manufacture of coconut oil, which, again, is utilized for the production of margarine, soap, and other products. Poonac, a largely used cattle food, is the by-product in the manufacture of coconut oil from copra.

The number of nuts required to manufacture a candy (560 lb.) of copra varies from 900 to 1,500.

The value of the exports of copra is shown in Diagram No. 9.

Prices.—The market opened the year at Rs. 68·25 per candy and advanced to Rs. 73·50 per candy by the middle of the month. From the middle of January to the end of the year there was a steady and persistent fall in values and the year closed at Rs. 35·75 per candy.

Average of the monthly quotations recorded by the Ceylon Chamber of Commerce for 1937 :—

(Estate No. 1 per candy of 5 cwt.)

	Rs. c.		Rs. c.		Rs. c.
January .	.. 68 75	May ..	.. 48 50	September	.. 39 16
February	.. 59 38	June ..	.. 44 7	October	.. 39 20
March ..	.. 57 29	July ..	.. 44 15	November	.. 36 44
April ..	.. 55 50	August .	.. 42 69	December	.. 35 17

The annual average market prices* in certain years were :—1925, Rs. 80·36 per candy (560 lb.) ; 1926, Rs. 79·40 ; 1927, Rs. 76·88 ; 1928, Rs. 76·22 ; 1929, Rs. 64·47 ; 1930, Rs. 52·36 ; 1931, Rs. 35·06 ; 1932, Rs. 42·21 ; 1933, Rs. 29·75 ; 1934, Rs. 21·98 ; 1935, Rs. 38·15 ; 1936, Rs. 48·01 ; 1937, Rs. 47·23. (See Diagram No. 5.)

Coconut Oil.—Although a large quantity of copra is exported for the extraction of oil by the importers, a quantity of coconut oil is prepared in Ceylon. The traditional method of extraction consists in grinding the copra in a "chekku" consisting of a large wooden pestle, which is revolved by bullock power in a kind of stone mortar.

The value of the exports of coconut oil is shown in Diagram No. 9.

Prices.—Coconut oil reached its highest point since 1929, when it touched the high price of Rs. 464·00 per ton in January.

The monthly average prices recorded by the Ceylon Chamber of Commerce for 1937, compare as follows :—

(White Oil per ton F. O. B.)

	Rs. c.		Rs. c.		Rs. c.
January .	.. 445 0	May	.. 314 50	September	.. 260 0

April	.. 357 9	August	.. 279 38	December	.. 226 88

The annual average market prices in certain years were :—1925, Rs. 543·17 per ton f.o.b. ; 1926, Rs. 539·36 ; 1927, Rs. 491·73 ; 1928, Rs. 489·02 ; 1929, Rs. 412·33 ; 1930, Rs. 351·63 ; 1931, Rs. 253·52 ; 1932, Rs. 283·75 ; 1933, Rs. 209·43 ; 1934, Rs. 149·98 ; 1935, Rs. 245·58 ; 1936, Rs. 288·55 ; 1937, Rs. 302·72†.

Desiccated Coconut.—Desiccated coconut is produced in Ceylon on a large scale.

* The average prices for 1927 to 1937 are for top grades only. Averages for other years represent the lowest and highest overall weekly quotations received for all grades.

† For White Oil. The average prices for 1925 to 1936 are for Ordinary Oil.

The value of the exports of desiccated coconut is shown in Diagram No. 9.

Prices.—The market opened the year at 16 cents and following the advance in copra the price touched 17 cents by the middle of January. Thereafter with the exception of very minor reactions, there was a steady fall in values and the market closed at the end of the year at 8 cents a lb.

Average of the monthly quotations recorded by the Ceylon Chamber of Commerce for 1937 :—

(Per lb.)

(See Diagram No. 5.)

Information regarding the manufacture of alcohol, &c., is shown under " Toddy and Arrack ", page 37.

Coir, &c.—An important but somewhat unorganized industry, also dependent upon the coconut tree, is the manufacture of coir, which consists of the stout fibres forming the husk of the nut. These fibres are separated by rotting the husks in water, or by special machinery. The fibres are then graded and used for making brushes, yarn, mats, rope, &c., according to their quality. In many parts of Ceylon the coir fibres are separated by village labour, chiefly women, and sold by them to exporting firms.

The value of the exports of coir is shown in Diagram No. 9.

Prices.—Offerings were fairly good during the first half of the year, as the United Kingdom, Germany, and Japan, all bought fairly heavily.

Average of the monthly quotations recorded by the Ceylon Chamber of Commerce for 1937 :—

MODERN FRIEZE AT KELANIYA.

Cacao.

Commercial cacao is produced from the seeds of the plant *Theobroma cacao*. The variety now grown in Ceylon is the *Forastero*.

Elevation and Rainfall, &c.—The cultivation of cacao is restricted to favourably situated valleys at an elevation between 500 to 2,000 feet which receive a well regulated rainfall of 60 to 80 inches and are protected from high winds. Plantations lie almost entirely in the Kandy and Matale Districts of the Central Province. Of an approximate acreage of 34,000 acres under cacao in the Island 55 per cent. is in the former district and 33 per cent. in the latter.

Labour.—The labour required for a cacao estate works out at about one labourer for 2 acres. Tamils generally form the bulk of the labour force, but Sinhalese are also employed for lopping, &c.

Planting.—As the young plant requires to be carefully shaded, shade trees must be planted at the same time between the rows about the same distance apart as the cacao.

Crops.—Cacao commences to bear fruit about the fifth year, two crops a year being then gathered. The general average yield is about 3½ to 4 cwt. per acre.

Picking.—The flowers and fruit of the tree grow in a characteristic manner direct upon the trunk and branches of the trees. The fruit is ellipsoidal and of considerable size, and the beans are covered with pulp or mucilage. Ripening is generally indicated by a change of colour on the outside of the pods. The fruit on the stems and main branches is picked by means of an ordinary pruning knife, while that on the higher parts of the tree is dealt with by cacao hooks. The picking gang goes round as often as necessary, the period generally being between a fortnight and three weeks. The pods are cut down by men or boys, who are followed by women, who gather the pods and heap them together. The fruits are opened the same day, and the beans carted or carried to the fermenting shed. One labourer will pick 1 to 1½ bushels of wet beans per day. This is equal to about 37 lb. of the cured product.

Fermentation.—At the fermenting shed the beans, covered with mucilage, are heaped into boxes or vats for fermentation. This process is accompanied by rise of temperature and by decomposition of the pulp surrounding the beans. During the fermentation the pulp becomes more liquid and gradually flows away, the bottom of the fermenting boxes being perforated and raised off the ground to admit of this. The period of fermentation in Ceylon is about 36 hours. After 12 hours the beans are given a light washing and turned over into another box. They are again given a heavier washing at the end of the fermenting period of 36 hours, when they are carried or carted to the barbecue or curing house.

Curing.—The best method of curing is the gradual drying of the beans in the sun or barbecues covered with coir matting. By this method the best quality is obtained. The period varies from five to seven days, according to the temperature. Most of the picking has, however, to be done during the wet season, and a greater part of the crop is cured by artificial means. The most popular curing house is a two- or three-floor building, the floors being constructed of strips of wood covered over with

coir matting, on which the freshly-fermented beans are spread. The building is heated with hot air conducted by pipes placed under each floor, the hot air being obtained by means of a fan, which drives the air through the heating apparatus and then through the pipes. The temperature in the building during the curing process is kept between 110 and 120 degrees Fahrenheit.

Packing.—Cacao after grading is packed in bags (112 lb. to a bag) when it is ready for export. Most of the cacao from Ceylon is shipped, in this form.

Prices.—The high prices paid at the end of 1936 were maintained during the greater part of 1937.

The average price for the year was Rs. 33·65 per cwt. as against Rs. 33·72 per cwt. in 1936.

Average of the monthly quotations recorded by the Ceylon Chamber of Commerce for 1937 :—

(Estate No. 1 per cwt.)

	Rs. c.		Rs. c.		Rs. c.
January .	.. 40 63	May ..	.. 34 45	September	.. 35 32
February	.. 39 25	June ..	.. 35 7	October	.. 28 45
March ..	.. 36 92	July ..	.. 36 95	November	.. 22 32
April ..	.. 36 82	August .	.. 37 88	December	.. 21 52

The annual average market prices* in certain years were :—1925, Rs. 33·17 per cwt. ; 1926, Rs. 30·41 ; 1927, Rs. 52·22 ; 1928, Rs. 58·89 ; 1929, Rs. 53·46 ; 1930, Rs. 37·51 ; 1931, Rs. 29·71 ; 1932, Rs. 27·71 ; 1933, Rs. 25·09 ; 1934, Rs. 22·99 ; 1935, Rs. 18·37 ; 1936, Rs. 33·72 ; 1937, Rs. 33·65.

The value of the exports of cacao is shown in Diagram No. 9.

Cinnamon.

Cinnamon, once the main export, still occupies a place—though a minor one—in the trade of the Island. The approximate total acreage is 26,000 acres, of which 58 per cent. is in the Southern Province (Galle District 40 per cent.) and 41 per cent. in the Western Province (Negombo area 30 per cent.)

The industry is entirely in the hands of Ceylonese. The number of large properties of 100 acres and over in extent is limited and these receive systematic attention. The majority of plantations are small areas of 10 to 25 acres in extent.

The Tree.—The cinnamon tree may grow to the height of 20 to 30 feet, and the trunk may be upwards of 3 feet in circumference. The trees cultivated to produce the cinnamon of commerce are coppiced, and long willowy shoots are produced, growing to a height of about 10 feet and to the size of a fair-sized walking stick. The shoots are cut and the bark is peeled off, and rolled into quills, which constitute the cinnamon of commerce.

Prices.—The average price for the year was 43 cents per lb. for quills and Rs. 47·17 per candy for chips.

* The average prices for 1927 to 1937 are for top grades only. Averages for other years represent the lowest and highest overall weekly quotations received for all grades.

Average of the monthly quotations recorded by the Ceylon Chamber of Commerce for 1937 :—

	Quills (Fine 0-0000 per lb.) Rs. c.	Chips* (per candy of 5 cwt.) Rs. c.		Quills (Fine 0-0000 per lb.) Rs. c.	Chips* (per candy of 5 cwt.) Rs. c.		Quills (Fine 0-0000 per lb.) Rs. c.	Chips* (per candy of 5 cwt.) Rs. c.

April	0 41	56 25	August	0 42	46 57	December	0 50	42 19

The annual average market prices† of quills in certain years were :—1925, 88 cents per lb. ; 1926, Re. 1·14 ; 1927, Re. 1·35 ; 1928, Re. 1·29 ; 1929, Re. 1·15 ; 1930, 59 cents ; 1931, 37 cents ; 1932, 28 cents ; 1933, 25 cents ; 1934, 29 cents ; 1935, 35 cents ; 1936, 37 cents ; 1937, 43 cents ; of chips : 1925, Rs. 84·54 per candy ; 1926, Rs. 93·79 ; 1927, Rs. 102·77 ; 1928, Rs. 105·72 ; 1929, Rs. 96·86 ; 1930, Rs. 56·41 ; 1931, Rs. 38·92 ; 1932, Rs. 26·40 ; 1933, Rs. 20·64 ; 1934, Rs. 30·64 ; 1935, Rs. 27·69 ; 1936, Rs. 33·75 ; 1937, Rs. 47·17.

An acre will yield about 120 lb. quills.

Citronella Oil.

Citronella oil grass is a large coarse grass growing 3 to 4 feet high, cultivated in Ceylon (and of late years in Java) for its essential oil, which is obtained from the leaves by distillation. It flourishes up to an elevation of 2,000 feet, but its cultivation is confined entirely to the Southern Province where the acreage under this crop is estimated to be 33,000 acres, of which 62 per cent. is in the Matara District and the remaining 38 per cent. in the Hambantota District. Cultivation is in the hands of the Ceylonese. The grass is readily propagated by division (seed being rarely produced), and may be planted about 2 by 3 feet apart in rows. Two cuttings a year may be obtained, and about 40 lb. of marketable oil per acre is an estimated annual yield. The oil is of a strong aromatic odour ; it is exported for use in scenting soaps, perfumery, &c., and is also a preventive against the bites of mosquitoes and leeches.

Prices.—During the first six months of the year prices fluctuated in a fantastic manner.

The average price for the year was 87 cents per lb. as against 42 cents per lb. in the previous year.

Average of the monthly quotations recorded by the Ceylon Chamber of Commerce for 1937 :—

(Per lb.)

The annual average market prices in certain years were :—1925, Re. 1·37 per lb. ; 1926, 99 cents ; 1927, 77 cents ; 1928, 93 cents ; 1929, Re. 1·06 ; 1930, Re. 1·12 ; 1931, 80 cents ; 1932, 94 cents ; 1933, 87 cents ; 1934, 55 cents ; 1935, 47 cents ; 1936, 42 cents ; 1937, 87 cents.

* Sifted free from sand and dust (in bags of 56 lb. nett).

† The average prices for 1927 to 1937 are for top grades only. Averages for other years represent the lowest and highest overall weekly quotations received for all grades.

Tobacco.

Acreage and Localities.—The estimated acreage under this crop in the Island is 14,000 acres, of which a little over half is found in the Jaffna District of the Northern Province, where great care is given to cultivation. The methods adopted are peculiar to this area and the manufacture of the leaf gives rise to the most important industry in the district. Another variety of leaf is grown in the Central Province which claims about 21 per cent. of the total acreage under the crop. Dumbara in the Kandy District is a particularly favoured area, while in the Matale District the crop is of some importance to the peasant, besides there being a small manufacture of cigars and pipe tobacco from the local leaf as in the case in Dumbara. Tobacco is also grown to the extent of about 1,500 acres in the Kurunegala District where the method of manufacture to produce a chewing tobacco differs from that adopted in Jaffna. Elsewhere cultivation is carried out in the North-Central and Eastern Provinces to less extents.

Dumbara Tobacco.—A high grade of Ceylon tobacco is grown in the Kandy District.

The leaves of the Dumbara tobacco burn with a good white ash, and are manufactured in the Island into cigars, which command a ready sale, and would be in greater demand if they were more uniform in quality. A large portion of the Central Province crop is sold to local manufacturers of cigars for use as wrappers for the Jaffna types. The leaves are smaller of lighter colour.

Jaffna Tobacco.—The Jaffna types consist of two kinds. These are locally known as the smoking and chewing kinds. Both are large-leaved, coarse tobaccos, the chewing type being of more vigorous and coarse growth than the smoking type.

Cardamoms.

Uses.—Cardamoms are of commercial value on account of the spice obtained from them, which is well known to cooks and confectioners, and is used in pharmacopoeia as a deadener of tastes and a medicine.

Habitat, &c.—The commercial value of the plant lies in the fruit, which is borne on racemes rising from the ground. The plant itself—*Elettaria Cardamomum*—grows in stools or clumps under the shade of forest trees at elevations between 2,800 and 4,000 feet, with a rainfall of 115 to 150 inches a year.

Manufacture.—The fruit is collected and is manufactured into either (1) bleached or (2) green dried.

Acreage.—The total acreage under cardamoms is estimated to be 6,000 acres, of which 82 per cent. is confined to the Central Province—approximately 2,500 acres in the Kandy District, 1,500 acres in the Nuwara Eliya District, and 1,000 acres in the Matale District. About 1,000 acres are found in the Kegalla and Ratnapura Districts (Province of Sabaragamuwa). The bulk of the plantations is in the hands of European owners, but the number of small gardens of a few acres in size in the hands of peasants is not inconsiderable.

Prices.—The average price obtained for cardamoms during 1937 was at a considerably higher level than for some years past.

DEVOTION.

Average of the monthly quotations recorded by the Ceylon Chamber of Commerce for 1937 :—

(Green per lb.)

	Rs. c.		Rs. c.		Rs. c.
January	2 26	May	2 22	September	2 20
February	2 54	June	2 20	October	2 20
March	2 35	July	2 21	November	1 61
April	2 13	August	2 17	December	1 16

The annual average market prices* in certain years were :—1925, Rs. 3·42 per lb. ; 1926, Rs. 2·44 ; 1927, Rs. 2·54 ; 1928, Rs. 2·50 ; 1929, Rs. 2·22 ; 1930, Re. 1·69 ; 1931, Re. 1·67 ; 1932, Re. 1·33 ; 1933, 95 cents ; 1934, 91 cents ; 1935, Re. 1·00 ; 1936, Re. 1·60 ; 1937, Rs. 2·10.

Arecanuts.†

Conditions.—The arecanut palm is grown in all village gardens in the wetter districts of the Island. It produces heavy crops of fruits, and provides straight stems, which are used for the erection of temporary structures. Pure cultivations of the palm similar to those to be found in Southern India are rarely seen in Ceylon, although in the Kegalla District there are some fairly extensive pure plantations. The area under arecanuts is about 69,000 acres.

The Fruit.—The fruits of the arecanut palm are harvested when ripe, and are sold in their unhusked state in all the bazaars and markets of the Island.

Arecanuts are generally exported to British and foreign India and the Maldive Islands, but practically the whole of exports in 1937 went into British India.

Foodstuffs.

Paddy or Rice.

If Hill paddy (*elvi*) is excluded, it may be said that the cultivation of paddy in Ceylon is based upon a plentiful supply of water. Not only are the plants dependent upon a good supply in all stages up to the ripening period, but the processes of cultivation in all parts of Ceylon, except some of the most northerly, are dependent upon it.

Rain-water Cultivation.—Cultivation without the help of irrigation is carried on, not only in dry districts like Jaffna, but also in wetter parts like the Kandy District. The success of the crop is entirely dependent upon a sufficient and reasonable rainfall, and upon the soil being capable of retaining the water for a fairly long period in order to tide over the rainless intervals. Should the rains fail after the paddy has been sown, the crop will perish, and then the cultivator must resow his field with a paddy which can mature in the remainder of the season, or lose the season entirely. Similarly, if the rains are late, the earlier maturing varieties of paddy must be sown.

Irrigation.—When paddy is grown under irrigation, the water may be supplied by springs, streams (*elas*), wells, or reservoirs ("tanks"). Cultivation under streams may be seen in the Central and Uva Provinces and under tanks in the drier Eastern, Northern, and North-Central Provinces.

* The average prices for 1927 to 1937 are for top grades only. Averages for other years represent the lowest and highest overall weekly quotations received for all grades.

† Although in point of value of exports arecanuts rank between rubber and cacao, this sub-section is inserted here, as the cultivation is not organized, and insufficient details are available regarding it.

Asweddumization.—In all cases where a system of irrigation is employed, the land must be " asweddumized ", or prepared for paddy. Should the paddy area not be level, it is necessary to terrace it. This terracing is brought to a high level of perfection in the hilly districts. Distribution channels convey the irrigation water to the upper plots, and drains carry off the surplus water.

Seasons.—There are two paddy-growing seasons, both of which are made use of for the cultivation of the same tract of fields when sufficient labour and water are available. The Maha crop is sown from the end of August to the middle of October, according to the district. The harvest from this crop is reaped in February or March. The Yala crop season commences with sowing in March-April, the harvest being reaped in July to September. The corresponding Tamil seasons are called Munmari and Pinmari or Kalapokam and Sirupokam. Generally speaking, six and three months are required for the respective Maha and Yala crops. In some districts sowings take place between Maha and Yala seasons for a *meda* or *iddi* (Tamil) crop.

Acreage—The area under wet land paddy in Ceylon is estimated to be 850,000 acres yielding approximately 12 to 13 million bushels of paddy (grain in husk) per annum. The greatest proportion of the acreage lies in the North-Western Province. But large extents are found in all the provinces.

Other Food Crops.

Chenas.—Many other food grains are grown in the Island. Except in the Northern Province, these are generally grown in " chenas "—areas of land covered with secondary forest or other vegetation, which are cleared and burned—which are either private or leased or granted by the Crown. The principal grains grown are kurakkan (*Eleusine coracana*), maize, Italian millet, *Paspalum* millet, and *Panicum* millet. Pulses are also grown in the chenas, the principal crops being green gram, horse gram, and black gram. Gingelly (*Sesamum indicum*) forms an important chena crop particularly in the Jaffna, Anuradhapura, and Kurunegala Districts. Hitherto in addition to the utilization locally of the crop produced in the Island, gingelly seed, oil, and poonac had been imported from India to the value of Rs. 2 to 3 millions.

Edible tubers grow in abundance. These are known in the Island as yams, and include dioscorea yams, tannia yams, sweet potatoes, and manioc. Sweet potatoes are abundant in the Southern Province, while manioc or cassava has spread rapidly in all districts in recent years, and constitutes a general food. The preparation of tapioca might be possible in some districts if a good supply of pure water were available.

Plantains (bananas) of various types are largely cultivated, and are to be found in all markets. The largest area of plantains is to be found between Polgahawala and Rambukkana, but in recent years the bunchy-top disease has appeared and caused considerable damage. This disease now appears to be less virulent, and areas which suffered severely some years ago are now giving good crops of fruit.

Jak and breadfruit are important foodstuffs, while " jaggery " is made from coconut, palmyra, or kitul palms.

Vegetables and curry plants are generally cultivated throughout the Island, and markets are well stocked. Dried chillies are prepared in the drier districts, while onions are largely grown in some localities.

Pumpkins, gourds of various kinds, and cucumbers are largely grown and find a ready sale in the various towns and village markets of the country. In the hills European vegetables thrive and are largely grown for transport by rail to the principal centres of population and to the shipping in Colombo Harbour.

Miscellaneous.

Cotton.—Considerable success was achieved in the efforts made to establish the cultivation of cotton as a peasant industry chiefly in the Hambantota District of the Southern Province and Matale District of the Central Province. Over 2,000 acres were cultivated in 1930 in the Hambantota District alone. Almost all the produce raised by the peasants was purchased by Government on behalf of the Spinning and Weaving Mills, Colombo, up to the end of the year.

Kapok.—Kapok is not grown as a pure crop, but is largely planted along the boundaries of fields and settlements and in some instances interspersed among other permanent crops. A regular trade is being conducted by petty dealers.

Kitul.—The fibre of the Borassus palm has always found a ready market, and in the past few years it has been used locally for the manufacture of brooms and brushes. The tree is not systematically cultivated, and is only indiscriminately distributed throughout the wetter districts of the mid- and low-country.

Papain.—This is the dried extract obtained from the milk of the papaya fruit for which there has been a steady market in the past. The crop was largely cultivated in the Kegalla, Kandy, and Kurunegala Districts, and the development of a profitable peasant industry was indicated.

Pepper.—The pepper vine is widely distributed throughout the wet low-country as well as in the Kandy and Matale Districts of the mid-country though systematic pure plantations are not established. It is grown against shade trees in certain tea and cacao estates, and is in evidence in practically every village garden.

Toddy and Arrack.

The production of toddy and arrack forms two important industries dependent on the coconut palm. For the formation of coconuts a large quantity of saccharine juice is supplied by the tree to the flowering stalks or spadices, which are enclosed in spathes. If the spadix is "tapped" before the nuts mature, and a pot attached to it, a quantity of the juice, varying from 6 to about 12 drams per day, can be collected in the pot. A dram is equivalent to 1/48 of an imperial gallon. If lime is not used to prevent fermentation, the action of yeasts, which are present in the air or in the pot, will convert the sugar in the juice into alcohol, and the liquid will be converted into toddy, with an alcoholic strength of about 4 to 8 per cent. Toddy is also obtained similarly from the palmyra and kitul palms. It is sold in taverns under Government licence at rates varying from 48 cents to Re. 1·20 per gallon.

A considerable industry depends upon the sale of toddy, which attracts many of the smaller Ceylonese and Malayalee capitalists. The cost of production of toddy (exclusive of transport and retailing costs) may be put at about 23 cents per gallon, and considerable profits are made when the sales are active.

The toddy consumption in 1936–37 (the rent-year being from October 1 to September 30) was 4,189,074 gallons, compared with 4,667,299 gallons in 1935–36, the average consumption per head of population being 0·79 and 0·88 gallons respectively. The figures for 1936–37 consumption do not include the toddy consumed in Jaffna District from January 1 to September 30, 1937, when all toddy taverns were abolished there and replaced by the tree tax system. Under this system, any person may tap any number of trees up to a maximum of 20 on payment of a tax Rs. 2·50 per male palmyra and Rs. 10 per female palmyra or coconut tree. The toddy is sold at the treefoot by each licensee; figures for consumption under the tree tax system are thus not available, which explains the apparent decrease of 478,000 odd gallons in consumption. The actual toddy revenue collected in the two financial years was Rs. 2,526,905 in 1935–36 and Rs. 2,598,533 in 1936–37, the revenue per head being 47 and 49 cents respectively and the revenue per gallon of toddy consumed 54 and 62 cents respectively. The revenue figures for 1936–37 include the tree tax revenue from January 1 to September 30, 1937, but the consumption figures do not include tree tax consumption; hence the apparent increase in revenue per gallon. In 1937–38 the rents of 161 toddy taverns were sold for Rs. 2,301,499, a slight increase on the amount realized from the rent sale of the 182 sanctioned taverns for the financial year 1936–37; the decrease in the number of toddy taverns is due to the abolition of the taverns under the tree tax system in Jaffna District.

By the distillation of coconut toddy, the local spirit known as "arrack" is produced, and this is sold, like toddy, in taverns licensed by Government. The whole of the distilling and sale of arrack is in the hands of Ceylonese capitalists. Distillation of arrack prior to 1923 was carried on in about 250 small pot-stills of the most primitive variety; it is now concentrated in eight large modern distilleries situated in the Kalutara District, the outturn capacity of each being not less than 60,000 gallons at 27°u.p. per annum. Three of the distillers have installed "Barbet's" patent stills for continuous distillation, each capable of producing 1,000 gallons of arrack per day. All distillery operations are carried on under the close supervision of the Excise Department. The arrack made at these distilleries is far purer and more free from copper than any arrack previously distilled from coconut toddy in Ceylon. Insistence on better straining of the toddy wash, and on greater cleanliness generally, has resulted in a steady improvement of the quality of arrack. An Extra Special quality of pure pot-still arrack, matured in wood for 5 years, was also sold during April and May, 1937, as an experiment; it was very well received. These new private distilleries were started in April, 1924. They supply arrack to Government at a fixed price under what is known as the "Contract Supply" system.

About 8 gallons of toddy are required to produce a gallon of arrack at proof strength, *i.e.*, the outturn in arrack (proof gallons) of a distillery is about 12·0 per cent. of the toddy distilled. The distiller's cost of production is about Re. 1·30 to Re. 1·35 per gallon at 27°

Copyright Photograph *Lionel Wendt.*

FROM THE LIVING ROCK.

under proof, according to variations in the prices he has to pay for his toddy supplied on contract. The distillers sell their arrack to Government at Re. 1·80 per gallon at 27 degrees under proof. Government stores and matures the spirit in wood, and carries on reducing, blending, and bottling operations.

Retailing is done by renters, who are usually those who offer the highest price for this privilege. In addition to paying this price irrespective of the volume of their sales, they pay the following charges for every gallon of arrack at 27° u.p. they obtain from a Government Warehouse to cover Government expenditure on purchasing, warehousing, and bottling arrack :—

Duty on bulk arrack at Rs. 8.50 per gallon and on arrack in bottles Rs. 7·50 per gallon ;

Cost price Rs. 3 per gallon in all districts except Trincomalee, Batticaloa, Badulla, Jaffna, and Vavuniya ;

Cost price Rs. 3·50 per gallon of bulk arrack at Trincomalee, Batticaloa, Badulla, Jaffna, and Vavuniya ;

Extra charges per gallon on the ordinary quality of bottled arrack Re. 1, on the Special quality of bottled arrack Rs. 2, and on the Extra Special quality of bottled arrack Rs. 3·50 per gallon.

The quantity of arack distilled during the last three years is as follows :—

	Gallons (proof strength)		Gallons (proof strength)		Gallons (proof strength)
1935 ..	.. 438,000	1936 ..	.. 511,000	1937 ..	.. 387,911

The, corresponding percentage of outturn for the three years was 12·0, 11·89 and 12.08 respectively.

The consumption of arrack rose from 360,957 gallons in 1935–36 to 388,330 gallons in 1936–37, an increase of about 7·6 per cent. which is mainly accounted for by improved economic conditions.

The number of arrack taverns in 1935–36 was 138 and in 1936–37 156. The estimated net revenue, after deducting expenses of the distribution and storage system, was Rs. 4,005,853 in 1935–36 and Rs. 4,480,009 in 1936–37, which are equivalent to Re. 0.75 and Re. 0·84 respectively per head of population. The arrack consumption per head of population was 0·07 gallons in 1935–36 as well as in 1936–37. The arrack revenue (net) per gallon was Rs. 11·10 in 1935–36 and Rs. 11·54 in 1936–37.

Vinegar Manufacture.

Toddy vinegar is obtained from the aceticization of fermented toddy, which takes place naturally after about 36 hours.

In 1924 special licences were first issued to vinegar manufacturers only in the Western and Southern Provinces, with a view to encourage the manufacture of toddy vinegar as a local industry. Rules were passed in 1926 to control vinegar stores. 15 such licences were in force during 1936–37 (an increase of 1 as against 1935–36) in addition to 3 licences issued to toddy tavern renters to manufacture vinegar from unsold toddy.

Excise Offences.

The following is a statement of Excise detections in the five years 1933, 1934, 1935, 1936, and 1937 :—

Year.	Foreign Liquor.	Arrack.	Toddy.	Opium and Ganja.	Others.	Total.
1933	3	385	7,008	737	2,661	10,794
1934	10	260	6,471	736	564	8,041
1935	2	295	5,565	818	1,062	7,742
1936	2	348	7,235	796	757	9,138
1937	1	462	8,162	984	344	9,953

The most remarkable increases occur under illicit distillation, illicit tapping, sale and transport of toddy, and under sale and possession of opium and ganja.

FISHERIES.

The fisheries of Ceylon can be subdivided into off shore, shore, lagoon, and fresh water fishing and the aquatic resources range from corals, molluscs and crustacea, to fishes, aquatic reptiles and aquatic mammals. The industry furnishes the country with about 23 thousand tons of fish or more annually, but this is by no means the entire quantity of fish products consumed.

The economic interests of the industry are not restricted to fishes alone for there are three molluscs of exceptional importance to Ceylon. One is the pearl oyster which occupies rocky "paars" in the Gulf of Mannar off the west coast from Puttalam to Adams Bridge. These banks are under Government control and the fishery a Government monopoly. The last fishery was in 1925, and the gross receipts totalled Rs. 517,507. The other bivalve is the window pane oyster which lives partly embedded in the mud of Tamblegam lagoon near Trincomalee on the East coast. This fishery is leased by Government for three-year periods. The amount obtained from the last lease was Rs. 19,825 and the total number of oysters fished was 3,773,329.

The other mollusc of importance is the chank which is fished in the shallow area of Palk Strait and the Gulf of Mannar. The royalty levied on the export of chanks for 1937 was Rs. 14,651·78. Money is also obtained by local bodies and by Government Agents from the sale of rentals for fish stalls and markets, sites for fish kraals, licences, &c., the amount obtained for 1937 being Rs. 21,000.

The question of developing the fishing industry has taken the foremost place in the investigations conducted by the Department of Fisheries, although the lack of staff has proved a hindrance. Much of the preliminary work necessary prior to commencing large scale operations has still to be done, and the greater number of food fishes in Ceylon waters are but little known, their bionomics even less so. Progress has been made in supplying this initial need, and accounts of several important families, fresh water as well as marine, have been published, while others are under preparation.

Preliminary investigations into local fish curing have also been undertaken and accounts of the curing methods published. As a result of the knowledge derived from this work it is now proposed to commence pisciculture and smoke curing. With this object in view a series of seven large fish ponds have been established near Colombo, and an adjunct to these will be a farm for aquatic, leather producing reptiles. On the same site is being erected a smokehouse which is now nearing completion.

Another advance in this direction is the decision to establish two fish curing yards on the East and West coasts, where fish curers will be supplied with high quality salt at the lowest possible price. The Marine Biologist is to advise the men in up to date curing methods and the by-products of the curing processes will be utilized as manure.

With a view to experimenting on a type of vessel and gear suitable to local fishermen the Fisheries Department has built a cuble supplied with a sail and auxiliary motor. It is proposed to place this vessel at the service of fishermen.

The results of their experiments and criticism should prove valuable in constructing a cheap type of vessel suitable for these waters. Two extensive fishing banks were surveyed by the Department some years ago, viz., Pedro bank off the north-east coast with an area of over 1,000 square miles and Wage bank off Cape Comorin with an area of about 4,000 square miles. These continue to be unexploited as the fishing vessels of Ceylon are small. The Portuguese tombu of 1618 enumerates large dhoneys among the fishing vessels of that period but these appear to have been mainly employed for staying at sea, and salting their catch which was later taken inland for sale. The spread of the railway and lorry now enables speedy transport of fresh fish inland and consequently the curing industry has declined, while the slow moving dhoney has disappeared from the fishing grounds, now worked solely by outrigger canoes and catamarans of limited capacity and incapable of further development.

Three grades of men control the industry. The first is the fisherman, who is generally employed by some wealthy capitalist who deals with contractors. The fisherman is subjected to from three to seven levies in cash and in kind from various quarters and it is debatable whether the help he receives in return is by any means adequate recompense. In the 16th century under Sinhalese rule the men were liable to a revenue tax which was increased by the Portuguese and Dutch who also forced the men to labour as shipwrights and to load and unload ships, while restrictions on salt added to their hardships and commenced the decline of a once active industry.

To-day there is a lack of facilities for research into such aspects of local fisheries as the bionomics of economically important aquatic animals, the chemical reactions undergone in fish curing, and putrefaction of cured products as well as the necessity for research into preservatives for boats and gear. A grant of Rs. 87,500 has been received from the Colonial Development Fund for erecting a research station, plans have been prepared and the work is about to commence. It is hoped that the above-mentioned problems and numerous others, such as the periodic disappearance of the Pearl Oyster, will be solved as a result of the facilities this station will afford for work, which hitherto remained in abeyance for lack of suitable technical equipment and buildings.

SALT

The manufacture, collection, and sale of salt constitute in Ceylon a Government monopoly, which is protected by an import duty. The monopoly is administered by the Executive Committee for Local Administration through the Salt Adviser and the Revenue Officers.

Ceylon consumes about 660,000 cwt. of common salt per annum. The greater part of this salt is manufactured or collected locally, and

any shortages due to failure of harvest are made good by the importation of salt of silimar quality from India or elsewhere. Salt is manufactured from sea water by solar evaporation at the Government Salterns at Elephant Pass, in the Northern Province, and at Palavi, near Puttalam, in the North-Western Province, also in the privately owned salt pans at Chiviyateru in the Northern Province, about four miles from Jaffna, at Puttalam and at Nilaveli, eight miles north of Trincomalee. Spontaneously formed salt resulting from the natural evaporation of brine is collected from lagoons in the Hambantota District of the Southern Province and in the Jaffna Peninsula in the Northern Province. These are Crown property. The quantity of salt manufactured at Chiviyateru is small, and the greater part of the Island's supply is derived from the Government Salterns, from the lagoons in the Hambantota District, and from the private salt pans at Puttalam. The following statement shows the total quantity of salt produced in Ceylon during the year and the average of eight years 1930–1937 :—

Producing Centre.	Average for 1930–37. Cwt.	1937. Cwt.
Elephant Pass	158,409	159,232
Palavi	82,703	103,575
Hambantota District	160,281	252,955
Puttalam District (excluding Palavi)	139,036	142,699
Jaffna and Mannar Districts (excluding Elephant Pass) ..	68,936	78,418
Trincomalee District	49,540	27,164
Total ..	653,905	764,043

Stocks at the beginning of 1937 amounted to 1,665,652 cwt. and at the end of the year to 1,787,842 cwt.

The amount realized during the financial year by sale of local salt from the Government depôts was Rs. 2,188,895 and the net revenue Rs. 1,600,137.

Owing to the nearly stationary consumption and the equalizing effect of the import duty the revenue from salt does not show a large percentage of variation from year to year.

PLUMBAGO.

Occurrence.—Plumbago, or graphite, is the most important of the Ceylon minerals. It occurs in minute scattered crystals in some of the granulities and crystalline limestones, but it is only where it is found in veins that it is of any commercial importance. The veins or pockets vary from the smallest size up to a yard or more in width, and often consist of pure graphite unmixed with other minerals. Frequently quartz, mica, felspar, pyroxene, apatite, pyrite, &c., are associated with the graphite. The most frequent country rock is a pyroxene granulite of the charnockite series.

Mines.—The deepest mines go to a depth of between 600 and 1,200 feet, while considerable quantities of the mineral are obtained very near the surface. Several of the largest mines are fitted with electric light and equipped with modern machinery but in most of them the arrangements are very primitive.

The majority of the large mines were closed in 1920, and still remain closed, but a very large number of small mines have been since opened, some of them having worked for a short period up to the end of the year. Two hundred and twenty-nine mines were reported to be working at the end of the year 1937 and employed about 4,147 men.

BUDDHA.

Prices.—During the year 1937 there was a slight improvement in demand and in prices.

The increase in the demand for plumbago during the year is due to activity on naval armaments and prices have consequently risen, so that there has been considerable activity in mining.

The average market prices for all grades for the last seven years were as follows :—1931, Rs. 182·34 per ton ; 1932, Rs. 168·73 per ton ; 1933, Rs. 126·95 per ton ; 1934, Rs. 143·02 per ton ; 1935, Rs. 148·15 per ton ; 1936, Rs. 112·40 per ton ; 1937, Rs. 132·35 per ton.

Trade.—Plumbago mining and the trade in plumbago have always been in the hands of the Sinhalese. Large mines are worked by capitalists on whose land plumbago has been discovered. Some of the large mines could turn out 200 or more tons a month and the total output from Ceylon, if required, could easily reach 30,000 tons a year.

Uses.—Plumbago is chiefly used in the manufacture of crucibles, furnace-facings, electrodes, and stove polish, for making lubricants, black paint and lead pencils and in electroplating. Large quantity of plumbago is used for the manufacture of munitions, and the principal buyers have been America, Japan, Germany, and the United Kingdom.

The exports of plumbago in 1937 amounted to 347,613 cwt. valued at Rs. 2,300,545.

OTHER ECONOMIC MINERALS.

Precious Stones.—Precious stones in large variety are found principally in the alluvial gravels of the Ratnapura District and the south-west portion of the Island. The most important are sapphire and ruby (varieties of corundum), chrysoberyl (including cat's eye and the rare alexandrite), beryl or aquamarine, and the semi-precious stones, topaz, spinel, garnet, zircon, quartz of various colours (cairngorm, citrine quartz, amethyst) and moonstone.

Mining for gems is carried on almost entirely by Sinhalese on a co-partnership system. The stones are bought up by dealers to be cut and polished. Many of the best stones are exported to Europe and America, but the inferior varieties are largely sold locally or in India. It is difficult to estimate the value of the annual output, but it may be put at somewhere about Rs. 2,000,000.

With the exception of moonstone, which is mined from a band of acid leptynite and some garnet, the gem-stones are all obtained from alluvial gravels. Sapphire and beryl have been discovered in abundance in pegmatite veins in the Matara and Kandy Districts, respectively, and the other minerals named are probably derived from rocks of similar type.

Thorium-bearing Minerals.—A number of minerals containing thorium and uranium have been found in Ceylon, in pegmatite veins and also in alluvial gravels, and as constituents of natural concentrates on the seabeach. These were mined on a small scale at one time, but the deposits appear to be exhausted and production has ceased. Monazite sands were worked under Government control near Bentota on the west coast, but work was abandonded in 1927 as unprofitable owing to the heavy fall in the price of the mineral.

Ilmenite and Zircon Sands.—Large deposits of natural beach concentrates, consisting of about 75 per cent. ilmenite and 25 per cent. zircon rutile, &c., are known to exist at Pulmoddai and Tirrukovil, on the east coast of the Island. The former deposit has been proved to

contain over two million tons of the mineral. Smaller deposits are found at other places on the coast. The mineral is used as a source of titanium for the preparation of titanium pigments, an industry of growing importance. The Ceylon deposits have not yet been exploited.

Mica.—A small amount of mica has been produced from pegmatite veins or from the contact rocks bordering limestones. The deposits are very irregular, the commercial mica occurring in patches in the veins, with much barren ground between them. There was a revival of interest in the mineral in 1931 and a few tons were exported. The variety exported was phlogopite (magnesia mica) or amber mica. Mining has however now ceased.

Other Mineral Products.—Other mineral products are the following :—

(1) Kaolin of good quality can be prepared from the decomposed felspar of granite rocks free from iron minerals.

(2) White quartz sand suitable for the manufacture of the commoner kinds of glass occurs in places on the west coast and in the north near Point Pedro.

(3) Limestone of a high degree of purity suitable for use in the manufacture of cement is found in large quantities in the Jaffna Peninsula. The coral deposits of the coast are extensively burnt for lime. The crystalline limestones of the interior of the Island are almost all dolomitic and yield inferior lime.

(4) The gneisses and granulites of the charnockite series furnish useful building stones.

(5) Pottery clays of poor quality and brick-earth suitable for the manufacture of bricks and tiles are found in all the river valleys. Kabuk, which is the product of decomposition of the surface of the crystalline rocks, is extensively used for small buildings. When first opened up, it can be cut into slabs, which harden on exposure to the air.

CHAPTER VII.

Commerce.

CEYLON is predominantly agricultural and her economic products, with the exception of tea, are raw materials, which are exchanged in the world's markets for the manufactured goods and articles of food needed by its population. The prosperity of Ceylon depends on income derived from tea, rubber, and the products of the coconut palm which constitute her staple agricultural industries. There are a few other products of a minor character, such as cacao, cinnamon, citronella, cardamoms, arecanuts, papain, kapok, &c., but they have never attained in recent times more than a fraction of the importance of the staple industries. Cultivation of paddy and other foodstuffs provides employment to a section of the indigenous population but the output of local grown food is insufficient to satisfy home consumption and has to be supplemented by an increasing volume of imports.

The foregoing account clearly shows that the economic life of Ceylon is not sufficiently diversified and the inelastic nature of the economic structure of the country was forcibly revealed with the onset of the depression. The abnormal fall in export values during the period of the world economic depression was naturally accompanied by a corresponding shrinkage of incomes which brought severe hardship on the cultivator,

DIAGRAM No. 7.

VALUES OF TOTAL TRADE, TOTAL EXPORTS AND TOTAL IMPORTS, CEYLON, SINCE 1923

Reproduced and Printed by Survey Dept. Ceylon 22 4 38.

both capitalist and peasant, as well as on the urban wage-earner. The recovery noticed towards the close of 1934 was maintained during 1935 and 1936, and there was further expansion in 1937 in all branches of the economic activity of the country.

The foreign trade turnover during the year aggregated Rs. 574 ·2 million recording an increase of Rs. 91·4 million or 18 ·9 per cent. over the preceding year and reached the highest level on record since 1930.

Imports during 1937 totalled Rs. 242 ·6 million which in comparison with the peceding year recorded a sharp rise of Rs. 28 ·3 million (13 ·2 per cent.). Exports of domestic produce on the other hand recorded continuous expansion since 1935, reaching Rs. 309 ·7 million in the year under review, which represented a substantial increase of Rs. 65 ·3 million (26 ·7 per cent.) over 1936.

The most noteworthy feature of the year was the revival of trade in coconut products due mainly to the steady rise in consumption of coconut oil and the resumption of purchases of copra by the European markets. However, tea was as usual the most valuable article of export, contributing 55 ·1 per cent. to the total export trade. Comparison with 1936 revealed a slight shortfall in the quantity of tea exported as a result of adverse climatic conditions, but the value nevertheless increased appreciably due to appreciation in price. Next in the order of importance was rubber representing 24 ·9 per cent. of the exports. It will be worth noting that the value of rubber has shown an uninterrupted rise after the institution of the rubber restriction scheme.

Exports of coconut products contributed 14 ·6 per cent., of which the share of coconut oil was 6 ·5 per cent., copra 4 ·0 per cent., and desiccated coconut 2 ·2 per cent.

The prices of almost all the export commodities appreciated considerably as compared with 1936, and in some instances the initial forward movement, begun in 1936, showed rapid acceleration during the earlier part of the year under review and then a gradual sloping in the latter half. The year as a whole was satisfactory to most producers.

The extent to which Ceylon depends on imported food is denoted by the fact that rice alone represented 20 ·9 per cent. of the total value of all imports, while currystuffs accounted for 1 ·8 per cent., fish products 5 ·9 per cent., sugar 3 ·2 per cent. and milk products 1 ·0 per cent.

Cotton piece goods take the most prominent place in the list of manufactured goods imported into Ceylon, being 7 ·4 per cent. of the total import value.

As a result chiefly of the general recovery of prices in respect of most of the major export products, the total visible balance of trade rose from the favourable amount of Rs. 54 ·2 million in 1936, to as high as Rs. 88 ·5 million in 1937.

The following table gives the total value of imports, domestic exports and re-exports during the last five years :

Year.	Total Imports.	Total Exports.		Excess of Exports over Imports.
		Exports (domestic).	Exports (other than domestic).	
	Rs.	Rs.	Rs.	Rs.
1933	177,147,000	180,111,000	20,082,000	23,046,000
1934	216,996,000	241,193,000	22,617,000	46,814,000
1935	227,501,000	230,041,000	23,072,000	25,612,000
1936	214,338,000	244,415,000	24,060,000	54,137,000
1937	242,600,000	310,198,000	20,365,000	89,475,000

From these figures it will be observed that foreign trade expanded rapidly in 1937 in comparison with the preceding year, but compared with the period 1927–29 which may be regarded as representative of pre-depression years, the trade turnover was very much lower. The balance of trade for 1937, which stood at Rs. 89·0 to our credit, showed an improvement of Rs. 34·9 million (64·4 per cent.) over the favourable balance of 1936. It will be noted that the balance of trade this year was the most favourable since 1927.

The following table shows the percentage distribution of domestic exports consigned to (*a*) the Empire and foreign countries respectively, and (*b*) the principal countries of destination during the last five years :—

Country (Destination).	Percentage Distribution of Exports.				
	1933.	1934.	1935.	1936.	1937.
British Empire—					
United Kingdom	51·24	51·58	51·79	49·14	46·42
Australia	3·86	3·72	4·44	4·57	4·12
British India	5·51	3·80	5·23	6·33	4·77
Canada	2·19	2·78	3·32	4·10	5·27
New Zealand	2·80	2·10	2·83	2·85	2·46
Union of South Africa	3·26	2·36	3·32	3·33	3·05
Other Empire Countries	1·36	1·55	1·85	1·54	1·57
Total British Empire	70·22	67·89	72·78	71·86	67·66
Foreign Countries—					
Belgium	1·50	1·47	1·32	1·07	1·42
Egypt	1·48	1·40	1·19	1·07	0·96
France	1·90	2·03	1·55	1·79	1·90
Germany	3·23	2·55	2·62	1·91	3·00
Italy	2·08	2·3[illegible]	1·55	0·31	1·59
United States of America	11·17	13·90	11·20	15·45	15·69
Other Foreign Countries	8·42	8·44	7·79	6·54	7·78
Total Foreign Countries	29·78	32·11	27·22	28·14	32·34
Grand Total	100·00	100·00	100·00	100·00	100·00

From the above table it will be seen that the share of exports consigned to Empire Countries have shown a tendency to decrease in recent years, particularly in respect of exports to the United Kingdom. Nevertheless nearly two-thirds of the exports of Ceylon found an outlet in Empire Countries. Of foreign countries, the United States of Amercia is the best customer of Ceylon.

The table below shows the share of imports enjoyed by (*a*) the Empire and Foreign Countries, and (*b*) the principal countries of supply during the last five years :—

Country (Source).	Percentage Distribution of Imports.				
	1933.	1934.	1935.	1936.	1937.
British Empire—					
United Kingdom	17·46	18·36	20·60	21·11	22·18
Australia	2·56	2·37	2·31	2·45	2·59
British India	21·29	20·15	19·48	21·49	22·01
Burma	18·00	14·59	17·50	15·15	13·88
Other Empire Countries	5·00	5·61	5·99	5·48	5·62

DIAGRAM No. 9

VALUES OF MAIN EXPORTS UNDER 40 MILLION RUPEES

Reproduced and Printed by the Survey Dept. Ceylon
22 4. 38.

It is of interest to note that the percentage share supplied by Empire Countries has been well maintained during the last three years—in fact the percentage for 1937 actually represented a slight increase over either of the preceding two years, but the percentage share was still below the 1929 level. Of Empire Countries, the shares of British India, the United Kingdom, Australia, and Straits Settlements increased. Of foreign countries, Japan increased her share of the market and has now established herself as the leading foreign supplier :—

PRINCIPAL ARTICLES OF EXPORT.

Description of Export.	Unit.	Quantity.		Value (Rs.)	
		1937.	1936.	1937.	1936.
			(Thousands)

Tobacco (unmanufactured)	lb.	2,414	2,666	710	584

Notes on Principal Exports.

Tea.

Tea, as already mentioned, is the most prominent article of export from Ceylon and accounted for 55·1 per cent. of the value of the export trade. Shipments in 1937 aggregated 213,732,751 lb. valued at Rs. 170,586,705 as against 218,149,441 lb. valued at Rs. 153,391,659 in 1936—recording a large shortfall of 4,416,690 lb. but the decline in quantity was compensated by a sharp rise of Rs. 17,195,046 in value over the preceding year. The decline in shipments was reflected chiefly in smaller consignments to Canada and Newfoundland which took 1·83 million lb. less. The United Kingdom which as usual ranked as the leading market for Ceylon tea took 144·9 million lb. or 0·5 million lb. less than in 1936. Other potential buyers were United States of America, Australia, and South Africa. The average price of tea rose from 67 cents per lb. in 1936 to as high as 76 cents per lb. in 1937, which reached the highest level on record since 1929.

Rubber.

Rubber exports rose by 44·3 million lb. to 156·1 million lb. in 1937, and were valued at Rs. 77·0 million or Rs. 30·2 million more than in 1936. The United States of America was, as usual, the best customer taking 73·6 million lb. while United Kingdom and Germany occupied the second and third places respectively. The price of rubber averaged 50 cents per lb. which compared very favourably with 41 cents in 1936 or 30 cents in 1935, and was the highest average recorded since 1929.

Coconut Products.

The total value of exports of coconut products aggregated Rs. 48 ·6 million and exceeded the preceding year's value by Rs. 15 ·0 million (44 ·7 per cent.). The volume of exports of coconut products (copra, coconut oil, desiccated coconut and fresh nuts) expressed in terms of nuts amounted to 1,063 million and rose by 46 ·2 per cent. above the previous year, while the price index for coconut products (72 ·0) rose by 1 ·7 per cent. and reached the highest level recorded since 1930.

Copra.—The total exports of copra registered a rapid expansion by increasing from 1 ·0 million cwt. in 1936, to 1 ·4 million cwt. in 1937, valued at Rs. 12 ·5 million—36 ·9 per cent. increase. Our best customer was British India which imported 956 ·6 thousand cwt. of Ceylon copra or 67 ·5 per cent. of the total quantity exported. A noteworthy feature was the resumption of purchases by Continental countries such as Italy, Denmark, Germany, and Holland, which took significant quantities this year. The average price of Estate No. 1 copra at Rs. 47 ·23 showed a slight fall below the previous year's level but was much better than in 1935.

Coconut Oil.—Shipments of coconut oil totalled 1 ·3 million cwt. valued at Rs. 20 ·1 million and were nearly double the quantity exported in 1936. Exports to Canada rose markedly, reaching 309 ·6 thousand cwt. or 221 ·9 thousand cwt. more than in 1936. The United Kingdom was the next best customer whose purchases amounted to 304 ·5 thousand cwt. or 177 ·6 thousand cwt. more. British India was a good third. The average price of coconut oil continued to rise to Rs. 302 ·72 per ton which was the best average recorded since 1930.

Desiccated Coconut.—Exports of desiccated coconut totalled 588 ·8 thousand cwt. realizing a sum of Rs. 6 ·8 million and were 13 thousand cwt. less than in the previous year. The leading market as usual was the United Kingdom whose takings in 1937 amounted to 58 ·9 per cent. of the total exports. Exports to the United Kingdom reached 346 ·6 thousand cwt. or 7 ·9 thousand cwt. less than in 1936. The average price of desiccated coconut at 10 cents per lb. showed a slight fall from the previous year's level but was much better than in 1934.

Fresh Coconuts.—The total number of nuts exported in 1937 amounted to 11 ·1 million nuts or 5 ·8 million nuts less than in 1936. In fact the number sold during the year was a little over half of the exports in 1935 or little over a third of the quantity distributed in 1934. The United Kingdom was the leading market for fresh coconuts which absorbed 4 ·0 million nuts as against 4 ·3 million nuts in 1936. Egypt was second in order of importance while British India was a close third. The price of fresh nuts averaged Rs. 44 ·83 per 1,000 as against Rs. 43 ·03 per 1,000 in 1936 and was the highest recorded since 1930.

Coconut Poonac.—Exports of coconut poonac aggregated 603 ·7 thousand cwt. valued at Rs. 2 ·4 million and were nearly double the quantity shipped in 1936. Belgium as usual absorbed practically the whole of the exports. The trend of the price of poonac has been upwards since 1934, and averaged Rs. 78 ·46 per ton in 1937, the highest level attained since 1932.

Coir Fibre.—Shipments of coir fibre reached a high level during 1937 totalling 927 ·6 thousand cwt. and fetched a sum of approximately

Copyright Photograph *Lionel Wendt.*

FOR SALE.

Rs. 4·0 million. The increase over 1936 was 112 thousand cwt. or 13·7 per cent. but a notable rise of 32·0 per cent. was recorded in comparison with 1935. The United Kingdom and Japan were the principal customers. The increase in exports to Japan may be due to war requirements arising from the Sino-Japanese conflict, but the German market has shown considerable expansion within the last three years as a result of a shortage of cordage and yarn in that country. The average price of 3 tie bristles advanced from Rs. 4·95 per cwt. in 1936 to Rs. 5·49 per cwt. in 1937, reaching the highest level on record since 1933.

Coir Yarn.—Exports of coir yarn totalled 107·6 thousand cwt. realizing a little over a million rupees and exceeding the previous year's level by 21·4 thousand cwt. Germany was the best market for coir yarn while the United Kingdom occupied second place.

Coconut Shell Charcoal.—Exports of coconut shell charcoal aggregated 269·1 thousand cwt. fetching a sum of nearly a million rupees and recorded a noteworthy improvement of 134·1 thousand cwt. or 99·3 per cent. over the preceding year. The United Kingdom topped the list of importing countries in taking 55·4 per cent. of the total exports which was more than double the quantity absorbed in 1936, while France, the next best customer also doubled her purchases made in 1936, and took 41·6 per cent. of the total exports.

Cacao.

A sudden recovery was noticeable in the cacao trade during 1937 from the continuously recessive movement of exports observed in recent years. Shipments of cacao reached 8·7 million lb. valued at Rs. 2·6 million and 2·1 million lb. heavier than in 1936. The Philippine Islands as usual was the best market for Ceylon cacao and took 3·8 million lb. or 1·4 million lb. more than in 1936. The United Kingdom ranked second. The market price of cacao No. 1 averaged Rs. 33·65 per cwt. and was slightly less than in 1936, but recorded a sharp rise of Rs. 15·28 per cwt. in comparison with 1935.

Plumbago.

The quantity of plumbago shipped in 1937 (347·6 thousand cwt.) represented a substantial expansion of 77·3 thousand cwt. over the previous year and was valued at Rs. 2·3 million—shipments in fact being heavier than in any of the three preceding years. The principal market for the commodity was the United States of America which took 1,405 thousand cwt. during the year as compared with 83·8 thousand cwt. in 1936. Exports to the United Kingdom showed a slight increase, but Japanese purchases on the other hand were smaller than in 1936. The price of plumbago realized an average of Rs. 6·62 per cwt. as against Rs. 5·61 in 1936.

Cinnamon.

Exports of quills and chips totalled 52·9 thousand cwt. realizing an appreciable sum of over Rs. 2 million and recorded an increase of 5·6 thousand cwt. over the peceding year. Mexico as usual topped the list of customers by purchasing 11·4 thousand cwt. Germany was the next best customer with purchases totalling 11·1 thousand cwt. which compared very favourably with the 4·1 thousand cwt. exported in 1936. The United Kingdom was a good third. The average price of quills further hardened to 43 cents per lb. representing the highest average for any year since 1930.

Cinnamon Oil.

Exports of cinnamon oil amounted to 2 ·9 million oz. valued at Rs. 457 ·2 thousand as against 3 ·2 million oz. valued at Rs. 444 ·1 thousand in 1936. Over half the exports went to the United States of America which is our leading customer but compared with 1936 her purchases showed a substantial reduction of 599 thousand oz. Exports to the United Kingdom improved by 96 ·7 thousand oz. which was our second best market for the commodity. The total value of exports continued to move upwards during the last three years in contrast to the down trend in volume.

Citronella Oil.

Exports of citronella oil increased sharply from 1 ·3 million lb. in 1936 to 1 ·5 million lb. in 1937 valued at Rs. 1 ·3 million. The increase was due to heavier consignments to the United Kingdom and the United States of America which absorbed 21 ·4 per cent. and 49 ·6 per cent. respectively of the total exports. The price of citronella oil showed a sharp advance to 87 cents per lb. from the very low level at 42 cents per lb. in 1936 to which it had fallen since 1934.

Arecanuts.

Exports of arecanuts amounting to 68 ·3 thousand cwt. recorded a sharp recession of 38 ·5 thousand cwt. from the level reached in 1936. British India alone consumed 56 ·9 thousand cwt. accounting for 83 ·3 per cent. of the total exports in 1937. Prices showed a slight improvement over the previous year.

Cardamoms.

Shipments of cardamoms totalled 2 ·9 thousand cwt. fetching Rs. 685 ·7 thousand compared with 2 ·3 thousand cwt. valued at Rs. 425 ·9 thousand in 1936. The United States of America was the largest purchaser buying 16 ·1 per cent. of the total exports while Aden and the United Kingdom accounted for 11 ·4 per cent. and 9 ·8 per cent. respectively of the total distribution. The average price of cardamoms continued to increase to a slight extent in comparison with 1936 but the price average was nearly double that in 1935.

Bullion and Specie.

The following table shows the imports and exports of bullion and specie during the last five years :—

Year.	Imports. Rs.	Exports. Rs.	Excess of Exports over Imports (+) and Imports over Exports (—). Rs.
1933	51,000	54,725	+ 3,725
1934	—	77,900	+ 77,900
1935	33,571	28,400	— 5,171
1936	96,940	117,150	+ 20,210
1937	535,520	41,838	—493,682

Imports of bullion and specie during 1937 totalled Rs. 535,520 as against Rs. 96,940 in 1936, of which gold bullion alone from India and the United Kingdom amounted to Rs. 337,391 while silver bullion from United Kingdom was valued at Rs. 120,772. Exports of bullion and specie on the other hand reached Rs. 41,838 compared with Rs. 117,150 in the preceding year and consisted chiefly of silver coin valued at Rs. 35,600 sent to British India.

Notes on Principal Imports.

Rice.—The total quantity of rice imported was 1·0 per cent. less than in 1936. Burma remained the chief source of supply and the quantity imported from this source showed an increase of 658,913 cwt. as compared with the preceding year. Imports from British India and Cochin China showed a slight increase but this was offset to an appreciable extent by a sharp decline in imports of Siamese rice which recorded a shortfall of 1,157,252 cwt.

Sugar, including Candy, &c.—Imports of sugar recorded a slight decrease of 1,749 cwt. below the level reached in 1936. Java supplied 88·2 per cent. of the total imports.

Other Grain.—The chief imports under this head are paddy, pulses, gram, and beans. 88·1 per cent. of the paddy and 17·2 per cent. of the beans came from Burma, while 98·8 per cent. of the pulses and 61·3 per cent. of the gram arrived from British India. With the exception of pulses, imports of all other grains showed increases over the preceding year.

Tobacco, Cigars, and Cigarettes.—Increased importations were again recorded for all varieties of tobacco and manufactures thereof, with the only exception of cigarettes. The imports of beedies, cigars, and unmanufactured tobacco have increased by 31·1 per cent., 17·3 per cent., and

*Full figures. †Excluding plates.

21·6 per cent. respectively in comparison with 1936, while cigarettes continued to fall by 41·2 per cent. Imported cigarettes are now being rapidly replaced by locally manufacted cigarettes. All the beedies were supplied by British India. Cigars were largely from the Philippine Islands. The United Kingdom supplied 97·4 per cent. of the cigarettes while the United States of America sent us 85·6 per cent. of unmanufactured tobacco.

Coal and Liquid Fuel.—Imports of coal increased from 405,536 tons in 1936 to 570,598 tons in 1937. British India was the principal supplier with a share of 67·4 per cent. of the coal imports. Imports of liquid fuel indicated a sharp increase of 12·5 million gallons as compared with the previous year. The principal sources of supply were Iran and Non-British Borneo who sent us 76·5 per cent. and 11·6 per cent. respectively of the total imports.

Manure.—Imports of fertilizers recorded a substantial increase of 371,675 cwt. or 22·8 per cent. over the preceding year. The chief varieties of manure imported were bone meal (304,455 cwt.), mineral rock phosphate (277,948 cwt.), fish manure (71,091 cwt.), fish guano (37,044 cwt.), calcium cynamide (36,997 cwt.), muriate of potash (122,409 cwt.), castor seed poonac (54,601 cwt.), groundnut poonac (136,769 cwt.), sulphate of ammonia (675,017 cwt.), and superphosphate (54,186 cwt.). Most of the manures came from British India except mineral rock phosphate from Egypt, calcium cynamide from Jugo-Slavia, muriate of potash and superphosphate from Belgium.

Cement.—Imports of cement in 1937 showed an increase of 258,117 cwt. over the preceding year, with the United Kingdom supplying 37·9 per cent. and Japan 55·0 per cent. of the total imports. Imports from the United Kingdom increased from 484,000 cwt. in 1936 to 568,000 cwt. in 1937 while Japanese cement totalled 825,000 cwt. in 1937 as against 626,000 cwt. in the preceding year. Germany was the next largest supplier.

Metals and Metalware, ferrous.—Comparison with 1936 shows an excess of 122,305 cwt. in total imports of ferrous metals and metalware during the year under review but the value increased much faster. The United Kingdom supplied 51 per cent. of the total imports and Belgium 14 per cent. The movements in the main articles of import from the United Kingdom were as follows: Pig iron increased from 9,300 cwt. in 1936 to 10,301 cwt. in 1937; non-fabricated steel bars and rods dropped from 26,546 cwt. to 23,550 cwt., iron and steel girders, &c., fell from 38,534 cwt. to 29,638 cwt., galvanized corrugated sheets increased from 31,092 cwt. to 45,386 cwt., tinned plates and sheets rose from 23,251 cwt. to 32,627 cwt. Tubes, pipes, and fittings decreased from 90·8 thousand cwt. to 72·4 thousand cwt.

Non-ferrous metals and metalware.—Imports under this group registered a shortfall of 10,755 cwt. below 1936, but the value showed an opposite movement. The bulk (59 per cent.) of the supplies was received from the United Kingdom while British India and Germany accounted for 16 per cent. and 11 per cent. respectively of the total imports. The principal articles imported under this head were aluminium lining, the bulk of which came from the United Kingdom.

Cotton Piece Goods.—The normal conditions observed in 1936 continued to prevail during the year under review. A slight increase of 199,938 yards in total imports of cotton piece goods with a corresponding rise of Rs. 1,695,839 in value was recorded during 1937. The increase was reflected in bleached goods (18·5 million yards) which advanced to a small extent by 0·4 million yards and in dyed stuffs (30·9 million yards) which showed a rise of 0·7 million yards. These increases were offset to a great extent by a shrinkage in grey sheetings (2·1 million yards) and prints (15·3 million yards) which were less by 0·5 million yards and 0·1 million yards respectively below a year ago.

As compared with the preceding year British India is the leading supplier in the cotton piece goods market. The United Kingdom was a good second while Japan was a poor third. British India and United Kingdom have benefited tremendously from the preference accorded to Empire piece goods and the restriction of imports of foreign textiles introduced in 1934. Notwithstanding these tariff barriers imports from Japan have shown a slight increase. All Japanese quotas for 1937 were eventually filled in view of the determination of licence-holders that no part of their holding should lapse and fall to others in 1938 when the quotas would be increased.

Kerosene Oil.—As compared with the previous year the total imports of kerosene oil showed an increase of 792,939 gallons, the quantity imported being 7,824,015 gallons as against 7,031,076 gallons in 1936. Practically the whole supply came from Sumatra.

Petrol.—The quantity entered for home consumption during 1937 recorded a sharp advance of 3,350,297 gallons over the previous year as a result of the increase in motor traffic. Sumatra again was the only potential supplier.

Motor Vehicles.—Imports of motor cars showed an increase of 603 in number and Rs. 1,165,869 in value in comparison with 1936. 2,013 cars which represented 84 per cent. of the total imports came from the United Kingdom and were valued at Rs. 3,676,467 as compared with 1,607 cars in 1936. Imports of motor buses and lorries recorded a rise of 108 in number—the total number imported being 709 valued at Rs. 1,305,581 as against 601 valued at Rs. 1,102,590. The chief supplier was the United States of America which accounted for 53 per cent. of the total imports while the United Kingdom supplied 38 per cent.

Tea Chests.—Comparison with 1936 revealed a shortfall of 116,247 in the quantity of tea chests imported, but the value showed an increase of Rs. 248,744. Imports from Japan which usually supplied about half our requirements fell by 191,170 chests as compared with 1936. Russia and Finland on the other hand supplied 96,738 and 29,105 chests respectively more.

Bullion and Specie.

The following table shows the imports and exports of bullion and specie during the last five years :—

Year.	Imports.	Exports.	Excess of Exports over Imports (+) and Imports over Exports (—).
1933	51,000	54,725	+ 3,725
1934	—	77,900	+ 77,900
1935	33,571	28,400	— 5,171
1936	96,940	117,150	+ 20,210
1937	535,520	41,838	— 493,682

Imports of bullion and specie during 1937 totalled Rs. 535,520 as against Rs. 96,940 in 1936, of which gold bullion alone from British India and the United Kingdom amounted to Rs. 337,391 while silver bullion from United Kingdom was valued at Rs. 120,772. Exports of bullion and specie on the other hand reached Rs. 41,838 compared with Rs. 117,150 in the preceding year and consisted chiefly of silver coin valued at Rs. 35,600 sent to British India.

BUREAU OF INDUSTRY AND COMMERCE.

To assist in the development of the industrial and commercial activities of Ceylon a Bureau of Industry and Commerce was formed as a section of the Department of the Registrar-General who assumed charge of these subjects in his capacity as Director of Commercial Intelligence. A proposal to organize the Bureau into a separate Department of Commerce and Industries has been approved and the new Department under a Director of Commerce and Industries will be established during the course of 1938. Apart from the financial assistance and technical advice given to local industries, the primary object of the commercial section of the Bureau is to foster the export trade of the country. The Bureau is in direct communication with overseas officers of the Department of Overseas Trade, England, and is in a very favourable position to offer local traders the advantages of a reliable and effective Government organization.

A definite expansion in the activities of the Bureau was made in 1935 with the appointment of a Trade Commissioner for the United Kingdom whose headquarters is at Ceylon House, Aldwych, Strand, London, and this was followed in 1937 by the appointment of a Trade Commissioner for India with his headquarters at "Ceylon House", Hornby road, Bombay. Both these institutions are in reality overseas branch offices under the supervision of the Registrar-General and Director of Commercial Intelligence.

TOURIST BUREAU.

In order to promote tourist traffic to Ceylon, a Government Tourist and Publicity Bureau was established in June, 1937. The office of the Bureau is housed in the Grand Oriental Hotel buildings, York street, Colombo, and all information regarding tourist attractions of Ceylon and facilities available in the country to tourists can be obtained from the Director, Government Tourist and Publicity Bureau.

CHAPTER VIII.

Labour.

THE estimated population of Ceylon in 1937 was 5,700,000 and was mainly engaged in agricultural pursuits or in occupations subsidiary thereto.

The cultivation of paddy and other locally grown foodstuffs is undertaken exclusively by the peasantry of the Island either on their own lands or on those rented from others. For the most part the assistance of any workers outside the village population is not required and in discussing the labour position of the Island this form of occupation can be neglected.

Copyright Photograph *Lionel Wendt.*

ELEPHANT.

The problem with which any student of Ceylon labour is concerned is that of employment on the estates of tea, rubber, and coconuts which constitute the main source of prosperity in the Island. The tea and rubber estates and in a minor degree the coconut have always employed a large proportion of workers from the villages of South India, the surplus population of which has always been ready to seek employment outside their own country.

The Sinhalese peasant has not shown any marked desire to abandon his fertile village field and take up permanent residence on estates. Until recent years the presence of a large Indian labour force in the Island has been accepted as a feature of the industrial and agricultural life of the country. The establishment of tea, rubber, and coconut estates has reduced the area available for the settlement of the surplus village population which in the last three decades has increased to a marked degree. On the other hand the villager has not yet shaken off the outlook associated with an independent peasantry and is not generally attracted to the life on an estate associated with the discipline which has to be maintained to promote the efficiency of a large labour force.

The number of Sinhalese on tea and rubber estates in respect of which information is alone available shows a steady increase which is not sufficiently large to arouse the interest of the public. At the end of the year it was estimated to be 84,454.

In Colombo Indian labour has been attracted to almost every sphere of business and domestic activity. Again the urban Sinhalese unskilled worker has not as yet acquired that attitude which makes him regard regular employment as an unquestioned feature of daily life. He has in consequence found it occasionally difficult to secure employment owing to the presence in his midst of a large labour force of undoubted efficiency.

The position in which the Ceylonese worker now finds himself is viewed with concern by their leaders whose representations led to the appointment of a Commission consisting of Sir Edward Jackson, K.C., O.B.E., former Attorney-General of this Island to inquire into—

(*a*) the extent of Immigration into Ceylon from India—whether it is increasing or decreasing ;

(*b*) whether such immigration has caused or is likely to cause unemployment or other economic injury to the permanent population of the Island ;

(*c*) whether any restriction or control beyond that already existing should be imposed on such immigration and if so what form such restriction or control would take.

Sir Edward Jackson concluded his investigations during the course of 1937 but at the conclusion of the year his report had not been received. The tea and rubber industries have jointly built up in South India an organization for the importation of labour into Ceylon. This machinery is supervised both under the law of India and under that of Ceylon and the despatch of labourers is governed by special regulations which place an effective control on the numbers migrating.

The operation of the Indian Emigration Act does not affect the departure from India of so-called non-emigrant labourers who have already spent 5 years or more in this Island and the wife or child of such labourer, though an official of the Indian Government is the sole arbiter on the evidence produced as to the duration of residence. Emigrants who are

despatched by this Agency can be divided into two categories, viz., the recruited and the non-recruited. The former comprise labourers recruited by the holder of the licence issued by the Controller of Labour and endorsed by an officer of the Government of India in Ceylon. The latter include those labourers who offer themselves at the depôts of the organization in South India for employment in this country.

The cost of the maintenance of the organization together with that of the transport of labourers to Ceylon despatched by the organization are met from a fund created by a levy based on the acreage of those estates employing Indian labour. The number of labourers so assisted to enter Ceylon in recent years was—

1933	32,898
1934	140,607
1935	43,018
1936	40,803
1937	51,427

Owing to circumstances arising out of the restriction scheme imposed on the tea and rubber industries a surplus of labour was reported at the beginning of the year under review to exist on their estates and arrangements were made for the repatriation of a large number of workers together with their families. As the result of this repatriation 4,485 persons were despatched to their homes in South India at the expense of the above-mentioned fund. During the course of the year, however, a shortage of labour was reported and demands were made for the despatch of labour from South India to Ceylon.

Prior to the issue of any licences for recruitment efforts were made to supplement the labour force on estates from the surplus Sinhalese village population. Sufficient response was not forthcoming and proposals were made to establish a bureau in Ceylon for recruitment of Sinhalese villagers for work on estates on lines similar to those used with success in South India.

This step, however, was not sufficient to meet the immediate demand for labour and it was decided to authorize the issue of licences for the despatch of 5,000 labourers from India to Ceylon.

Unfortunately owing to differences with the Government of India arising out of matters not chiefly connected with the conditions under which labour was employed in this country the Indian Government refused to permit recruiting by means of licences and later placed an interpretation on their regulations which did not appear to be justified either as they are at present worded or in accordance with the spirit in which regulations were framed.

Meanwhile the bureau for recruitment of Sinhalese labour was established in an area where a large degree of unemployment existed. After 2 months working 530 applications for employment had been registered and 230 despatched to estates. When it is remembered that the total labour force on tea and rubber estates is in the neighbourhood of half a million workers, it will be realized that the bureau will play but a small part in supplying the normal wastage which invariably occurs.

The total number of workers in the tea and rubber estates of the Island at the end of 1937 was 545,696.

Statistics are not available for any other forms of employment.

ELEPHANT PULLING CART.

CHAPTER IX.

Wages and the Cost of Living.

LABOUR IN CEYLON.

1.—*Agricultural.*

ABOUT 850,000 acres are cultivated in paddy. The whole of this area is worked by village labour usually by the owner or lessee of the land, and his relations, but frequently also by hired labour.

The Estates.—The principal crops grown under estate conditions are tea, tubber, and coconuts. Tea estates almost entirely, and rubber estates for the most part, are worked by labour imported from South India (Tamil or Telugu). A few Indians are also employed on coconut estates, but these are mostly worked by Ceylonese.

At the end of 1937 the total number of Indians on estates was roughly 657,000, as compared with 659,311 at the end of 1936. The total number of arrivals of estate labourers during the year amounted to 51,427 and the departures to 47,927.

2.—*Industrial.*

A large number of labourers are employed in various activities connected with the port of Colombo, *e.g.*, as stevedore labourers, or in the coal-yard and marine engineering works.

Wages.—Under Ordinance No. 27 of 1927 a minimum wage is fixed for Indian labourers on tea and rubber estates and the new rates of wages in force from November 16, 1934, are—

	Men. Cents.	Women. Cents.	Children. Cents.	
Up-country	49	39	29	with rice at a rate not exceeding Rs. 4·80 per bushel
Mid-country	43	35	25	
Low-country	41	33	24	

In 1927 a Commission appointed to inquire into wages earned by the harbour workers in Colombo recommended the following rates which were accepted by the employers :—

	Loading Cargo. Rs. c.	Discharging Cargo. Rs. c.
Day, Full	1 75	1 60
Broken Periods, 6 A.M. to 12 noon	1 0 (*i.e.*) (87 plus 10)	0 90 (*i.e.*) (80 plus 10)
12 noon to 6 P.M.	0 87 *	0 80 *
or Every half or part thereof	0 20	0 20
Night—	†	†
Full	3 50	3 20
Half	1 75 *	1 60 *
Broken Periods— For every hour between 6 P.M. and midnight	0 30	0 30

* Subject to the qualification that wages by the hour for any fraction of a half day or half night shall not exceed the wages payable for the whole of that half day or half night.

† A full night's wages are payable when a labourer works from 6 P.M. to any fraction of the night beyond midnight.

4——J. N. 77053 (8/38)

The following table shows the classification adopted by Government for daily and hourly paid labour :—

		Rates per Hour.	
		Minimum. Cents.	Maximum. Cents.
Minor supervising grades	Class A I.	48	81
	A II.	31	63
Tradesmen	Class A III.	36	53
	A IV.	20	35
Semi-skilled labour	Class A V.	12	20
Unskilled labour	Class A VI.	8	14
Trade apprentices	Class A VII.	10	18
Women and boys	Class A VIII.	3	10

		Rates per Diem.	
		Minimum. Rs. c.	Maximum. Rs. c.
Minor supervising grades	Class B I.	3 84	6 48
	B II.	2 48	5 4
Skilled labour	Class B III.	2 88	4 24
	B IV.	1 60	2 80
Semi-skilled labour	Class B V.	0 96	1 60
Unskilled labour	Class B VI.	0 64	1 12
Trade apprentices	Class B VII.	0 80	1 44
Women and boys	Class B VIII.	0 24	0 80

Estates employing Indian labour are required by law to pay their labourers monthly. In Colombo wages are often paid every week or fortnight.

Other Conditions Affecting Labour.

On nearly all estates the resident labour force is provided with free housing accommodation. In Colombo a few firms make similar provision for their labourers, but in most cases the latter find their own lodgings. Indians employed by the stevedore contractors are generally housed in a "kittangi"—a sort of barrack where the men sleep together in one large room.

Medical Attention and Provision for Old Age.—Estate labourers are entitled to free medical treatment either at the estate hospital (if there is one) or at the nearest Government hospital. Other labourers are entitled to free treatment at Government hospitals if they earn less than Rs. 50 per month in wages.

Female labourers on estates are entitled to free lodgings and medical care for one month after confinement.

Indian Labour on Estates.—Sick and indigent labourers are repatriated to India at the expense of the Immigration Fund.

Most estates pay a pension to deserving labourers who are no longer able to work. Free meals are usually given daily to children.

The Workmen's Compensation Ordinance, No. 19 of 1934, came into operation on August 1, 1935. It provides for compensation to be paid by the employer on the lines of the Indian Act to every workman who is injured by accident arising out of and in the course of his employment and to the dependents of workmen who have died as the result of such accident.

The Trade Unions Ordinance, No. 14 of 1935, came into operation on November 1, 1935. It provides for the compulsory registration of all Trade Unions.

CHAPTER X.

Education and Welfare Institutions.

Control.—Primary and secondary education in Ceylon, under the control of the Minister of Education and the Executive Committee of Education, is administered by the Department of Education, assisted by a Board of Education and 23 Education District Committees.

Board of Education.—The Board of Education is composed of 20 members nominated by the Governor. The Director of Education is Chairman and the personnel of the Board includes members of the State Council, managers of schools, and teachers. The main duties of the Board are to advise the Government on any educational matters especially referred to it for advice. It is not an administrative or executive body, and all regulations which are recommended by the Board require the confirmation of the Governor, and are thereafter laid before the State Council.

Education District Committees.—An Education District Committee has been constituted in each Municipality and Revenue District. These Committees are appointed by the Governor, and consist partly of officials and partly of unofficials. They are responsible first for putting into effect the rules relating to compulsory education and they frame by-laws and employ attendance officers for this purpose. Secondly, they erect and maintain schools where these are required. They are financed by an annual grant from the department, which is allocated on the basis of an approved programme of works submitted each year to the department.

Schools and Attendance.—The system of education in Ceylon provides a course of education leading to University degrees in arts, and science, and diplomas in medicine and law.

The schools of Ceylon are not divided on a basis of race or nationality. All schools which are maintained by Government or assisted by means of grants are compelled by law to admit pupils irrespective of race, nationality, or religion.

Attendance at school between the ages of six and fourteen is compulsory, subject to a few exceptions. Such compulsion, however, applies only when school accommodation is provided within a reasonable distance of the residence of the pupil.

There are three distinct types of schools—schools administered directly by Government, schools assisted by Government and under the immediate control of private managers, and schools maintained by Government and managed by the Divisional Inspectors of Schools with the assistance of Local Managers.

There are 378 Maintained schools. These schools are administered under the Codes for Assisted schools but the whole cost of staff and maintenance is borne by Government funds. All new Maintained schools are placed under the management of the Divisional Inspector of Schools.

There are 1,555 Government schools, and the arrangements for the staffing of these are entirely in the hands of the department. All examinations for the issue of teachers' certificates and of otherwise testing efficiency, and all appointments, transfers, &c., are also dealt with by the department.

Assisted Schools and the Grant System.—There are in addition 3,418 (including schools attached to places of religious worship) Assisted schools under the immediate control of private managers. These schools receive an annual grant from the Education Department. In the case of vernacular schools the annual grant is calculated as the total amount of the salaries paid to an efficient staff plus an additional amount for maintenance. No fees are charged in vernacular schools. In the case of the English schools, however, fees are charged and from such fees the manager has to provide a fixed sum towards the salary of each teacher he employs. The grant consists of the balance of such salaries.

There are 161 schools attached to places of religious worship. These schools are supported by grants from Government funds.

In addition to Government Assisted and Maintained schools, there is a certain number of private schools which are not assisted in any way by Government funds. Such schools are, however, subject to inspection by the department.

The type of instruction given in Ceylon schools can be considered under two main headings: (i.) non-vocational instruction; (ii.) vocational instruction.

Classification of Schools.—Under the heading of non-vocational instruction is included the type of instruction which is general and academic, and by far the larger number of schools come under this class. These schools are classified as follows :—

English.	Bilingual.	Vernacular.
Collegiate	Senior Secondary	Senior Secondary
Senior Secondary	Junior Secondary	Junior Secondary
Junior Secondary	Primary	Primary
Primary		

The primary schools provide a course of instruction from the Kindergarten up to Standard V. The course usually lasts six years.

The junior secondary schools provide a course of instruction from the Kindergarten up to the School-Leaving Certificate. The course usually lasts ten years.

The senior secondary schools provide, in addition to the course for the junior secondary schools, a further course up to the standard of the London Matriculation Examination. The course usually lasts twelve years.

The collegiate school is an English school which provides a course of instruction from Form I. or Standard VI. up to the standard of the London Matriculation Examination. The course usually lasts five years.

The vast majority of students complete their education at the junior secondary stage.

In addition to the schools that come under the above classification, there is a certain number of temple schools, which are known as Pirivenas. These schools are primarily intended for the Buddhist priesthood, and are not compelled to adopt the syllabus of work used by the ordinary schools.

Vocational Schools.—Under the heading of vocational schools come those schools which give a specialized form of instruction. Apart from one Technical College, these can be divided into part-time schools and full-time schools. Under the heading of part-time instruction is included a variety of home industries which are taught to pupils in certain schools in addition to the ordinary academic course. Under the heading of full-time industrial schools come institutions for the training of teachers, technical schools, agricultural schools, and industrial schools. The

Copyright Photograph *Lionel Wendt.*

EMERALD TERRACES.

course in training schools is usually one of two years. In technical schools it varies according to the subject which is studied. In agricultural schools courses are entirely for adults who intend either to teach agricultural science or to become practical agriculturists. There is a variety of full-time industrial schools. All industrial schools are conducted upon a profit-sharing principle, so that the pupils benefit by whatever articles they produce. The course is one of two or three years. The subjects in which instruction is given are :—carpentry, weaving, basket work, pottery, printing, lacquer work, blacksmith work, and a few other minor industries.

The medium of Instruction.—The medium of instruction in schools varies according to the type of schools. In vernacular schools the medium of instruction is entirely Sinhalese or Tamil. This group of schools includes 81 per cent. of all the school-going children in Ceylon.

In Bilingual schools the vernacular language is the medium of instruction for the first four or five years of school life, after which a course of English is introduced in Standard IV. Every year thereafter the number of periods allotted to English is increased. The vernacular, however, continues to be taught throughout the whole course. There are also vernacular schools where an optional course of English, for one period a day, is given in all classes above Standard III.

In the case of the third group of schools, viz., English schools, two methods are employed in giving instruction in the English language.

In the first method pupils are admitted at the earliest stage of school life, viz., the Kindergarten. Pupils admitted in this way have usually a working knowledge of English, so that their progress in mastering the language is very rapid.

The second method employed is a two-year special course in English for pupils, who go from vernacular schools to English schools. The pupils who enter this course are approximately nine years of age, and have already received instruction in their own mother tongue in the primary standards. This course is an intensive one, in which the direct method of teaching a foreign language is employed. After completing this course pupils are able to enter the ordinary standards of the English school, in which the medium of instruction is English. In the majority of such schools the vernacular languages continue to be taught throughout the upper classes.

It will be seen, therefore that in the system of instruction prevailing in Ceylon the pupils are given the following alternative courses :—(1) a full course of instruction in the vernacular languages ; (2) a full course of instruction in the vernacular languages plus a working knowledge of English ; and (3) a full course of instruction in English, not merely for pupils whose mother tongue is English, but for those who at the beginning of school life have no knowledge of that language.

SCHOOL FOR THE DEAF AND BLIND.

During the year 1937, 30 children were admitted, 20 of them being deaf and 10 blind. The total number of the deaf and blind children is classified thus :—

	School.		Industrial.		*Ex*-Industrial.		
	Boys.	Girls	Boys	Girls.	Boys.	Girls.	Total.
Deaf	102	56	16	—	10	—	184
Blind	47	65	37	1	13	—	163
							347

Many applications for admission for deaf children have been rejected for lack of room. There are a few mental defectives and one deaf and blind. They were admitted through the school's inability to diagnose their condition and cannot be removed as they have no relations or friends.

Health.—There has been no serious illness of any sort.

School.—Both the deaf and blind schools are under the direction of an expert teacher from England. They report as follows :—

Deaf School.—In the kindergarten classes the speech standard is good and compares favourably with that of English schools. This standard is apt to fall however as children pass into higher grades where the intensive teaching of language becomes so vital.

The School has decided to purchase an electrical Hearing Aid, the Multitone, which is likely to improve to a very marked extent the speech and language of all children possessing even the slightest residual hearing.

Language teaching by means of school excursions is proving of very great value in the deaf department.

Blind School.—The standard of work in the blind department has progressed considerably during the past year. End of term examinations have been instituted and have proved most satisfactory. Spoken English is good, but written English is a little disappointing. Nevertheless the Blind children of Ceylon are well up to the standard of the Blind in England, especially the girls. This may be due to exceptional power of concentration combined with memories above the average.

Music has been a great feature this year. The School Choir is a great joy, and the kindergarten percussion band has proved a valuable and most educational institution.

Owing to the lack of braille books, which are extremely expensive, a group of girls, over school age, have been employed in producing class readers in Sinhalese and English for both girls' and boys' school. When completed, the books are handed over to a blind boy who proof-reads and binds them.

More stress has been laid down upon physical training, one of the most difficult subjects of the blind school curriculum. School excursions are proving of value to the blind children.

Industrial Work.—The removal of the girls to Broomhill has had good results both with regard to training and the marketing of the goods.

The boys' carpentry section moved to Kotte in October and is helping to build houses in readiness for the Weavers and Rattan Workers who, it is hoped, will move in March.

The after care of the industrial boys and girls is a serious problem which has up to the present met with no satisfactory solution, but it is receiving serious attention. Some deaf boys have found employment but not in the trade they have been taught. They are usually set to do unskilled work at a very low rate of pay.

Orphanages.—Educational facilities are provided for orphans or destitute children. A maintenance grant of Rs. 75 is paid to the manager of an approved Orphange or Home on account of each orphan or destitute child who is between the ages of $\frac{\text{5 and 15 (in an Assisted Vernacular school)}}{\text{5 and 17 (in an Assisted English school)}}$ at

Copyright Photograph *Lionel Wendt.*

BOUTIQUE.

the beginning of the school year and who has been in residence at an Orphanage or Home for a period of not less than 9 months and has regularly attended a registered school during this period. Such grants during 1937 amounted to Rs. 172,470·88.

Reformatory.—There is only one reformatory school to which juvenile offenders are admitted. Here they are taught different trades such as gardening, carpentry, tailoring, cooking, bookbinding, ironwork, printing, weaving, &c., while undergoing their term of punishment. One hundred and twelve juvenile offenders were admitted during the year bringing the total to 338.

Prisoners.—There are schools for prisoners at the two jails in the Colombo District. There are 29 pupils at Mahara and 86 pupils at Welikada. Social workers conduct English classes for certain prisoners at the latter jail. The jail school at Kandy has 3 pupils.

Lepers.—There are two schools for lepers : one at Hendala and another at Mantivu which are conducted by the Sisters of the Franciscan Order. The school at Hendala consists of three sections, *i.e.*, English, Tamil, and Sinhalese containing 28, 28, and 27 pupils respectively. The ages of the pupils range from 5 to 44. The average attendance is 49. The Mantivu Leper School, also consisting of 3 sections, has 3 pupils in the English section, 12 in the Sinhalese, and 14 in the Tamil.

The Langdon Home.—In Badulla District there is one institution which receives assistance from Government for training women in industrial work and household management. After a period of training, these women go into the villages and teach the older girls reading, writing, sewing, embroidery, and lacemaking. They also give instruction in the art of clean and efficient housekeeping and also encourage the practice of thrift.

Pensions, &c.—The posts of Government teachers are pensionable and in addition they make contributions to a Widows' and Orphans' Pension Scheme. Teachers in assisted schools are eligible for a pension similar to that of Government teachers, but the pension scheme in assisted schools is on a contributory basis.

THE CEYLON UNIVERSITY COLLEGE.

The University College was established in 1921 for the purpose of affording facilities for higher education to students in Ceylon.

Numbers.—The number of students on the roll in July, 1937, the beginning of the academic year, 1937–38, was 586, including 64 women students. The figures for 1921–36 were as follows :—

1921	..	166	1927	..	279	1933	..	417
1922	..	217	1928	..	315	1934	..	449
1923	..	262	1929	..	338	1935	..	539
1924	..	262	1930	..	394	1936	..	541
1925	..	256	1931	..	355			
1926	..	313	1932	..	377			

Courses.—The College offers instruction in Latin, Greek, Sankrit, Pali, English, Sinhalese, Tamil, Logic, Philosophy, History, Geography, Economics, Pure Mathematics, Applied Mathematics, Physics, Chemistry, Botany, and Zoology.

Honours courses are provided in Classics, English, Indo-Aryan (Sanskirt and Pali), History, Mathematics, Chemistry, Botany, Zoology, and Physics.

The College course is normally one of three years. At the end of the first year students take the (External) Intermediate Arts, Science, and Economics examinations of the University of London conducted in Ceylon. At the end of the third year they take the final examinations for the B.A. (General), B.A. (Honours), B.Sc. (General), and B.Sc. (Special) Degrees of the same University.

The College provides also a two-year course for Diplomas in Sinhalese and Tamil to students who have already passed the London Intermediate Examination in Arts. The course is of Honours degree standard.

Students who intend to join the medical profession are given one year's course of instruction in Physics, Chemistry, and General Biology, at the end of which they take either the First M.B. Examination of the University of London or the Pre-Medical Examination of the Ceylon Medical College, or both.

Graduates.—On the results of the examinations held in June, 1937, 35 candidates qualified themselves for the B.A. and B.Sc. degrees of the University of London.

The total number of graduates from the University College from the time of its inception in 1921 is 411, of whom 28 obtained Honours in Classics, 16 in English, 33 in History, 45 in Mathematics, 15 in Indo-Aryan, 6 in Physics, 18 in Chemistry, 6 in Botany, and 5 in Zoology.

Hostels.—Most of the students not living with their parents or relations are residing in four hostels affiliated to the College and subject to the College rules and regulations. These hostels are administered by extra-university bodies and are subsidized by the Government.

University College Council.—This Council, which consists of twenty members nominated by His Excellency the Governor, advises the Principal of the College in matters relating to the administration of the College, and the preparation for its conversion into a University.

THE CEYLON MEDICAL COLLEGE.

The Ceylon Medical College was established in 1870 in the form of a medical school capable of affording a practical education on the principles of medicine and surgery, and especially midwifery, together with a practical knowledge of Anatomy, Physiology, Materia Medica, Pharmaceutical Chemistry, and the art of dispensing. It had originally a Principal and three lecturers, and the whole course took only three years.

This course was later increased from time to time in order to keep abreast with the progress of medical science. In 1887 recognition was granted by the General Medical Council of the United Kingdom, and the diploma became registrable in Great Britain and all parts of the Empire.

In 1924 the complete extended curriculum of one year's pre-medical study (Chemistry, Physics, Biology) and five years' medical study was adopted.

The College now provides the complete course of instruction required for the practice of modern Medicine, Surgery, and Midwifery. Including the course of preliminary or pre-registration work in Physics, Chemistry, and Biology, which is provided by arrangement at the University College, Colombo, the whole course takes six years.

In addition to the complete medical curriculum, the College provides a course of instruction for a minor grade of medical practitioners, known as Apothecaries. These receive a two years' course of instruction in Anatomy, Physiology, Chemistry, Pharmacy, Pharmacology and Dispensing, Elementary Medicine, Surgery, and Midwifery, both theoretical and clinical, and Surgical Dressing, and in Hygiene and Public Health. Since October 1, 1937, candidates are admitted only on passing the Apothecaries Entrance Examination. Those gaining the first 20 places in order of merit are admitted to the Apothecaries course of 2 years for which they each pay Rs. 25 a term as College fees. The free course of instruction has been abolished. On passing the two Apothecaries' Examinations they are employed by the Government to take charge of the Government Dispensaries and some small hospitals in the remote rural areas and villages, but are only permitted to practise while so employed in Government service and are subject to the control of the District Medical Officers. They are eligible to be registered as Pharmacists.

These Apothecaries to a large extent provide for the medical treatment of the poor villagers in remote districts and where fully qualified medical practitioners are not available.

A department for the training of pupil midwives has been added to the College. This work was formerly carried out by the Department of Medical and Sanitary Services, but from October 1, 1931, the teaching and examinations of pupils have been vested in the College Council. First and second class certificates of efficiency are conferred on successful candidates, who are then eligible to be registered as midwives. As this arrangement in practice proved difficult of administration it was discontinued from October 1, 1932. The College however continues to conduct the examinations for certificates of efficiency as midwives, the courses of instruction having been restored to the Department of Medical and Sanitary Services. The College thereby retains control of the standard of teaching.

The College is staffed by whole-time Professors, in Medicine, Surgery, Anatomy, Physiology, and Pathology, and a large number of part-time lecturers, mostly drawn from the officers of the Department of Medical and Sanitary Services.

Details of staff, fees, courses of study, and rules for students, and the history of the College, are embodied in the annual calendar, copies of which are sent free to Medical Schools in Great Britain, principal Educational Institutions, and Government departments in the Island.

The Government set up in 1928 a Post-licentiate Scholarship (suspended for the time being), which is granted yearly to the best student of the final year who qualifies in the first class within the statutory period, to enable him to obtain British qualifications and also to pursue studies and research in some special subject. The value of the scholarship is £300 per annum.

A small number of students generally discontinue study in the Ceylon Medical College and go to the United Kingdom to complete their studies.

THE LAW COLLEGE.

The Law College which is controlled by the Incorporated Council of Legal Education exists for the supervision and control of the legal education of students desiring to qualify themselves as advocates or

proctors of the Supreme Court. The Council consists of the Judges, the Attorney-General, the Solicitor-General, and such other persons of standing in the legal profession as the Judges may appoint. The members hold office for three years at a time. The academic qualifications requisite for admission in the case of advocates are (1) a degree in Arts or Science of any University in the British Empire, (2) a pass in the Intermediate Examination in Arts or Science of the University of London, and in the case of proctors (1) a degree in Arts or Science of any University in the British Empire, (2) a pass in the Matriculation Examination of the University of London or the Intermediate Examination in Arts or Science of any Indian University, or the Senior Local Examination, of the University of Cambridge, or the Cambridge Senior School-Leaving Certificate, provided always that the candidate shall adduce proof that he has passed an examination in English and Latin, such examination being either the examination on which he relies for his qualification or some one or other of the aforesaid examinations of any University in the British Empire.

Admission to the Law College takes place in the month of September and the number of students admitted during the year 1937 were :—

For the Advocate's course	20
For the Proctor's course	58

The staff consists of 14 lecturers appointed to hold office for a period of 3 years at a time, and a Principal.

The examinations provided for by the Rules of the Incorporated Council of Legal Education are held in the months of December and July, the examiners being appointed annually. The number of candidates who in 1937 entered for these examinations, and the number successful therein were as follows :—

	Entered.	Passed.
Examinations for the Admission of Advocates	118 ..	79
Examinations for the Admission of Proctors	516 ..	287

CHAPTER XI.

Communications and Transport.

SHIPPING.

Colombo Harbour.

Introduction.—The position of Colombo at the junction of the most important trade routes in the East makes it an important port in the commerce of the East, and this natural advantage has been enhanced by the excellent facilities for docking, bunkering, loading and unloading cargo, water supply, &c., afforded by the port to the vast tonnage of shipping navigating Eastern waters. The port of Colombo has contributed largely to the commercial and economic prosperity of the Island, and this fact is borne out by the phenomenal growth of the city of Colombo since the conversion of the open roadstead into a great artificial harbour enclosed by extensive breakwaters. Colombo is a great *entrepot*, and the volume of business passing through its Customs houses is an indication of the state of trade and general prosperity of the Island.

Copyright Photograph *Lionel Wendt.*

HAPPY MOTHER.

Trade.—The quantity of imports and exports handled in the port of Colombo in 1937 amounted to 1,756,880 tons (1,118,040 tons imports) and (638,840 tons exports), as compared with 1,609,128 tons (1,067,924 tons imports and 541,204 tons exports) handled in 1936. There has been an increase of 147,752 tons as compared with the previous year.

Harbour.—The harbour is enclosed on all sides, being bounded on the south and east by the land and on the north and west by massive breakwaters. The approach to the harbour is free from navigational dangers. Vessels drawing 33 feet can enter by the Western entrance and vessels drawing 27 feet can enter by the Northern entrance. The Western entrance channel is 630 feet wide, with a navigable depth of 36 feet L. W. O. S. T., and the Northern entrance channel 550 feet wide, with a navigable depth of 30 feet L. W. O. S. T. The sheltered area of the harbour amounts to 643 acres at low water, of which 246 acres have been dredged to 36 feet and over 140 acres to a depth varying between 36 feet and 33 feet, and 106 acres to between 33 feet and 30 feet ; the remaining 151 acres have a depth of less than 30 feet.

Accommodation for Vessels.—Berthing accommodation, exclusive of the Graving Dock, Guide Pier, and Oil Jetties, is available for 35 vessels in the north-east monsoon and 38 vessels in the south-west monsoon. Berths are available in either monsoon for vessels drawing up to 33 feet of water. One of these berths is for vessels of unlimited length.

Railways.—A broad gauge railway runs through the port premises and is connected with the main railway system of the Island, thus affording direct communication with all parts of the Island and Southern India. Sidings are provided at different places on the waterside. The length of the railway is 6 miles 19 chains, but the total mileage of railway used, including sidings, &c., is 14⅝ miles. The port railway is available only for the conveyance of goods, the tonnage of goods handled during 1937 being 233,198 tons, as against 255,498 in 1936.

Roads.—Communication by road to the harbour is excellent.

Canals.—The Lake to Harbour canal affords direct water transport between stores and mills situated on the lakeside and the harbour. It is navigable by fully loaded 40-ton harbour barges and to some extent relieves the congestion on roads. This canal, together with the lock basin and locks and the water area of the Beira Lake including the San Sebastian canal locks, is now included in the limits of the port of Colombo.

The total number of lighters, launches, &c., which passed through the Lake to Harbour canal during the year was 8,798, against 7,720 in 1936 and 7,504 in 1935.

Lakeside Facilities.

The development of the Lakeside Barge Yards, comprising the portion of land bordering on the Beira Lake, has opened up for commercial purposes a valuable stretch of land on the water front of the lake, and has relieved the congestion in the harbour by affording facilities for the reception of a number of boats which had hitherto been moored in the harbour. There is every indication, that, when trade improves, there will be an increasing demand for land on the lakeside which by its propinquity to the harbour and easy access thereto, both by land and water, affords a valuable venue for commercial purposes.

The Beira Lake is now an integral part of the port, and its progressive development will eventually lead to the establishment of a Commercial Zone in the vicinity of the port serving as a feeder to the business of the port and fostering its development.

Passenger Jetty.—The baggage office has good accommodation and examination halls. There is a staff always on duty day and night, and baggage landed with passengers is passed without delay. There is also provision for the storage of such baggage as a passenger may wish to leave in the premises, a small storage rent being payable. Accommodation is also provided at the Custom house at the Passenger Jetty for a Railway Booking Enquiry Office and a Post Office. The Passenger Traffic during the year shows an increase, the total number being 295,888, against 268,279 in the preceding year.

Landing and Shipping.—Landing and shipping of cargo is assisted by an efficient crane service. There is a total quayage of 15,657 lineal feet. The following are the particulars of cranes available at the port :—

Electric cranes	14	Hand derrick ..	1
Steam cranes	22	Steam derrick.. ..	1
Hand cranes ..	13	Mobile crane	1
Elephant hand crane ..	1	Steam jib crane ..	1
Floating cranes	2	Steam block loading titan ..	1

operating on the jetties and quays. The largest lift which can be made is 35 tons. The conveyance of cargo from the vessel to the wharf is done by lighters and is carried out by recognized stevedores and landing companies.

Cargo for shipment is brought down to the warehouse by cart, lorry, train, or barge. The Port Commission railway runs direct into the premises alongside three of the export warehouses. With regard to shipment, the same considerations apply as in the case of imports, some firms finding it more convenient to employ a clearing or shipping agency than to maintain their own staff. As in the case of import cargo, goods remain in the Government warehouse at the risk of the exporter. To suit the convenience of shippers who do not carry out their own shipments, landing and shipping companies are prepared to take over cargo at the shipper's stores for removal to the warehouse in the Company's own lorries. Export harbour dues are payable on all goods sent down to the warehouses or wharf. If they lie there for more than three clear days, further dues are payable for each day, and in addition a similar sum by way of warehouse rent. Cargo is taken to the vessel by means of lighters. A good supply of labour is available.

Warehouse Accommodation.—As goods discharged are not always directly transferred to some other means of conveyance, it has been found necessary to provide extensive warehouse accommodation for the increasing volume of goods demanding storage, pending shipment or removal from the premises. There is a total warehouse floor area of 568,786 square feet in the port for dealing with imports, exports, and transhipment cargo. Most of the warehouses have railway facilities and cranes are available where required.

The import warehouses are situated between the root of the South-west Breakwater and the Lake to Harbour canal. Other import warehouses and landing areas are also situated on either side of the canal, and these are largely used for the landing of rough cargo, such as timber and metal. Further north, three recently built warehouses are available at Kochchikade, where facilities are provided for transport by rail.

Five commodious warehouses are allotted for the accommodation of export cargo, in addition to an open shed used for the shipment of drums containing coconut oil and similar commodities, and another shed for rough cargo. The largest warehouse can accommodate 4,000 tons of tea packed in chests of the usual size. The other four warehouses can each accommodate from 2,500 to 3,000 tons.

There are several bonded warehouses within the Customs premises, and certain firms have their own bonded warehouses outside the premises. Goods may be bonded for any period up to two years, after which they must either be removed or rebonded. All goods placed in bond are liable to the same rent and harbour dues as in the case of import cargo up to the time of bonding, after which no further dues are payable and bonded warehouse rent is recovered, the amount payable per week on bonded goods being the same as the charge per day on import cargo. No rent is payable to the Customs in the case of goods which lie in bonded warehouses belonging to private firms, though a charge is made for Customs supervision of deposits and removals.

Several firms have their own warehouses and stores on the lakeside, which have direct access from the harbour through the canal and locks. Special facilities are given by the Customs for import cargo to be removed direct to these stores and, conversely, for the direct shipment of export cargo from these stores to the vessel. Rent and dues are, however, payable as in the case of goods landed in the warehouse, but the advantage of this direct traffic lies in obviating two additional handlings which would be necessary had the goods been landed or shipped from a quay.

Transhipment warehouses are available for the accommodation of cargo pending transmission to the destination. No import duty is payable upon such cargo, and rent and harbour dues are payable at a reduced rate, amounting to 1/5th of the rate payable upon ordinary import cargo. In the case of direct transhipment from vessel to vessel, a small fee is payable for Customs supervision. The volume of transhipment is fairly large, the quantity transhipped during the year being about 88,955 tons, but there is a steady traffic with Tuticorin and other South Indian ports of transhipment of cargo to and from the United Kingdom, America, Australia, the Far East, &c.

Removal of Cargo.—Goods may be cleared either by the importer himself or by any landing company or recognized clearing agency. Firms who import on a large scale find it convenient to keep their own staff of wharf clerks for the clearing of cargo and the passing of the necessary entries through the Customs. On the other hand firms whose business is not so great as to justify the maintenance of such a staff, find it more convenient to clear their goods through a Landing Company, or a Clearing Agency.

Warehouse rent and harbour dues are payable upon all goods landed at the wharf, and three clear days are allowed for the removal of the goods, exclusive of Customs holidays, of which there are five in the year, and Sundays. On goods removed after the expiry of this period further rent and dues are payable in respect of each day inclusive of Sundays and Customs holidays. Special facilities are offered by the Customs for clearing goods prior to the passing of the entry and the payment of the duty, rent, and dues. The usual system is to place a cash deposit with the Customs, against which goods are removed after any examination found necessary, the importer guaranteeing to pass the

necessary papers within a reasonable period. Special facilities are also given for the clearing of perishable goods and of consignments, such as rice and sugar, which are landed in large quantities at a time.

Coaling Facilities.—There are about 29 acres of land on the foreshore of the harbour, half of which is leased to different companies for the stacking of coal. The coaling grounds between the Barge Repairing Basin and the Graving Dock have 17 coaling jetties. Large supplies of coal can be procured, and steamers are bunkered with good despatch at any hour of the day or night.

The types and approximate prices of coal stocked at Colombo for commercial purposes are as follows (December, 1937) :—

Type.	Price Trimmed. (f. o. b.) Per Ton. s.	d.
Welsh coal (Admiralty quality)	52	10
Natal coal	43	0
Indian coal	42	3

The quantities of coal imported and issued for bunkers during the years 1936 and 1937 were as follows :—

	1936. Tons.	1937. Tons.
Imports	405,537	570,599
Bunkers	225,206	324,585

Oil Facilities.—The port is equipped with an up-to-date oil fuel installation which provides for the rapid bunkering of ships using oil fuel. The main Oil Installation Depôt, about 92 acres in extent, is situated at Kolonnawa, about 3½ miles from the harbour front, and various oil companies have erected their own storage and distribution tanks there. This depôt is divided into a non-dangerous and a dangerous oil section and is separated by a safety reservation. Three main pipelines are laid connecting the discharge berth in the harbour with the main oil depôt, two for oil fuel and the other for kerosene and petrol. In connection with the bunkering of vessels, a measuring tanks depôt, about 19 acres in extent, has been established at Bloemendahl, about ¾ of a mile from the harbour front, and branch pipelines are provided from Kolonnawa to Bloemendahl and from Bloemendahl to the bunkering berths. The oil depôt is also connected to the main railway system of the Island. Three reinforced concrete jetties, two for bunkering purposes and one for discharge of oil tankers, have been provided. The outer oil bunkering jetty is capable of accommodating vessels of 500 feet length and 26 feet draught. The inner bunkering jetty is used by barges for bunkering. Vessels of 500 feet length and 27 feet draught can be berthed at the discharge jetty where the latest facilities for discharging oil ships are provided, and vessels of deeper draught up to 29 feet are accommodated at the Graving Dock Guide Pier.

The imports of oil during the last two years were as follows :—

	1936. Tons.	1937. Tons.
Liquid fuel	300,453	313,942
Kerosene oil	23,639	29,467
Petrol and benzine	33,202	44,814
Total ..	357,294	388,223

Copyright Photograph *Lionel Wendt.*

KANDYAN DANCERS.

The quantities of liquid fuel issued for bunkers during the last two years were as follows :—

	No. of Ships Bunkered.	Tons.
1936	518	254,890
1937	566	266,670

There has been a decrease in the number of oil burning vessels calling at the port, while those burning coal have increased.

The Oil Facilities receipts during the year 1937 were Rs. 996,545·96, as compared with Rs. 930,297·60 in 1936.

Graving Dock.—Length of floor, 694 feet 7½ inches ; breadth of entrance-cope level, 85 feet ; depth over sill at low water, 30 feet ; depth over sill at high water, 32 feet. Docking can be carried out by day or night. An Inner Graving Dock, 350 feet long, entrance width 54 feet with a depth of 20 feet "at sill", is nearing completion. This is an extension of the existing Graving Dock.

Both docks are founded on solid rock, the outer being closed by a ship shaped Caisson, berthed alongside the south jetty when dock is open, the inner dock being shut off from the main dock by a "Box" flap gate, hinged along the sill and operated by a hydraulic winch.

The main pumping station on the North side of the main dock entrance is equipped with main steam driven centrifugal pumps capable of emptying the dock in less than 4 hours and is further equipped with drainage pumps, salt water pumps, electric generator for both 110 and 220 D.C. current air compressor and hydraulic pumps for operating penstocks and capstan—compressed air, salt and fresh water mains and electric supplies being available in both docks.

Patent Slip.—Length, 800 feet ; length of cradle, 220 feet ; breadth of cradle, 40 feet ; depth over keel blocks at lower end at low water, 21 feet 6 inches ; depth over keel blocks at upper end at low water, 10 feet 6 inches ; inclination 1 in 20. Capable of slipping a vessel of 1,200 tons dead weight.

Ambulance Facilities.—An ambulance launch is available for the conveyance of sick and injured persons between ship and shore. The Colombo Municipal Council provides an adequate and efficient motor ambulance service for the port.

Quarantine.—On entering the harbour each ship is visited by the Port Surgeon or his Assistant, and no person is allowed to board the ship or leave the ship till pratique is granted. If there are cases of infectious diseases on board, such as plague, cholera, smallpox, yellow fever, or typhus, the ship is held in strict quarantine until all necessary measures, such as removal of the sick person, disinfection of the ship, vaccination, &c., as the case may be, are carried out. Thereafter the ship is allowed to be worked in restricted quarantine, any persons having business on board being allowed on special permits.

Port Commission.—The Colombo Port Commission is composed of the following :—The Principal Collector of Customs (who is Chairman or Chief Port Commissioner) ; the Director of Medical and Sanitary Services ; the General Manager of the Railway ; the Mayor of Colombo ; the Deputy Collector of Customs ; the Master Attendant, Colombo and Galle ; the Harbour Engineer ; six Unofficial Members nominated by the Chamber

of Commerce to represent Import, Export, Shipping, Coaling, Oil, and Landing Agencies' Interests; two Unofficial Members nominated by His Excellency the Governor to represent Ceylonese interests.

RAILWAYS.

All the railways in Ceylon are State-owned and Government-controlled, the management being vested in the Ceylon Government Railway Department.

The total length of line open is 951 miles, of which 834 miles are broad gauge (5½ feet gauge) and 117 miles narrow gauge (2½ feet gauge).

The frontispiece map shows how the different lines radiate from Colombo.

The following table shows the distance from Colombo Fort to the more important stations on the different lines, with the first class return passenger fare and the approximate time of journey :—

Col. Fort. To—	Distance. M. C.	Train Fare (Return). Rs. c.	Approx. Time of Journey. Hours.	Col. Fort. To—	Distance. M. C.	Train. Fare. (Return) Rs. c.	Approx. Time of Journey. Hours.
Peradeniya	71 62	7 60	3*	Polonnaruwa	162 1	17 10	7¾*
Kandy	75 12	7 95	3¼*	Batticaloa	217 78	22 90	10¼

The main results of the working of the Ceylon Government Railway for the financial years 1932–33 to 1936–37 are shown in the following table :—

Particulars.	1932–33. Rs.	1933–34. Rs.	1934–35. Rs.	1935–36. Rs.	1936–37. Rs.
Total capital outlay	226,379,400	227,005,002	227,500,606	227,804,742	228,015,601
Gross earnings	19,711,602†	20,980,422	18,273,081	16,749,221	16,304,611
Total working expenses‡	19,319,240	18,943,156	18,911,326	19,587,815	20,355,043
Net revenue§	392,362	2,037,266	Loss 638,245	Loss 2,838,594	Loss 4,050,432
Percentage of net revenue on total capital outlay	·17 p.c.	·90 p.c.	—	—	—
	Rs.	Rs.	Rs.	Rs.	Rs.
Gross receipts from ordinary passenger and season tickets	7,539,419	7,941,378	6,547,579	5,917,331	5,943,769
Gross receipts from parcels, goods, &c.	12,172,183	13,039,044	11,725,502	10,831,890	10,360,842
Free traffic (excluding that for Railway Department included in gross receipts)	Nil	Nil	Nil	Nil	Nil

The number of passengers conveyed has increased by 98,681, the total conveyed during the year being 9,505,658. Under Season Tickets the number of ticket holders has increased by 34,975, the total number of season tickets issued during the year being 195,624.

* By express trains.
† Includes (Rs. 8,089) % Temporary levy on salaries.
‡ Includes provision for renewals.
§ That is, "Gross earnings" less "Total working expenses".

The number of parcels conveyed during the year was 1,131,665 or an increase of 4,446.

The tonnage of goods carried was 896,098 or an increase of 860 tons, the noticeable increases and decreases being :—

	Increase. Tons.	Decrease. Tons.
Agricultural produce	11,916	—
Cacao	159	—
Coconut produce (other than copra)	—	4,085
Copra	14,322	—
Manure	4,738	—
Petrol	1,680	—
Rice	—	42,966
Rubber	2,204	—
Salt	1,230	—
Sundry goods	12,459	—
Tea	—	10,501
Foreign Traffic	13,979	—
Special Train Traffic	—	2,334

Passenger Fares.

Fares.—(*a*) The fare charged in respect of each passenger for each mile of a single journey shall be as follows :—

		First Class. Cents.	Second Class. Cents.	Third Class. Cents.
(i.) On the Main Line from Nawalapitiya to Badulla and on the Uda Pussellawa Line		10½	7	2½
(ii.) On the Kelani Valley Line	First 20 miles of a journey	7	4⅔	2½
	Beyond 20 miles	5½	3½	1½
(iii.) On the Puttalam and Coast Lines and on the Maradana-Ragama portion of the Main Line	First 25 miles of a journey	7	4⅔	2½
	Beyond 25 miles	6	3⅔	1½
(iv.) On any other line		7	4⅔	2½

Provided that in the case of a single journey from any station on the Kelani Valley Line to any station on the Puttalam or Coast Line or the Maradana-Ragama portion of the Main Line, the fare charged in respect of each passenger for each mile shall be as follows :—

	First Class. Cents.	Second Class. Cents.	Third Class. Cents.
(i.) First 20 miles of the journey	7	4⅔	2½
(ii.) Any part of the journey beyond the first 20 miles, if done on the Kelani Valley Line	5½	3½	1½
(iii.) Any part of the journey beyond the first 20 miles, if done on the Puttalam or Coast Line or on the Maradana-Ragama portion of the Main Line	6	3⅔	1½

Provided, further, that in the case of a single journey from any station on the Puttalam or Coast Line or on the Maradana-Ragama portion of the Main Line to any station on the Kelani Valley Line, the fare charged in respect of each passenger for each mile shall be as follows :—

	First Class. Cents.	Second Class. Cents.	Third Class. Cents.
(i.) First 25 miles of the journey	7	4⅔	2½
(ii.) Any part of the journey beyond the first 25 miles, if done on the Puttalam or Coast Line or the Maradana-Ragama portion of the Main Line	6	3⅔	1½
(iii.) Any part of the journey beyond the first 25 miles, if done on the Kelani Valley Line	5½	3½	1½

(*b*) In calculating the fare for a single journey between any two stations, any fractional part of 5 cents which is below 2½ cents shall not be reckoned or charged for, and every fractional part of 5 cents equal to or above 2½ cents shall be reckoned and charged for as 5 cents :

Provided, however, that—

(i.) where the distance between the stations is one mile or less the 3rd class fare shall be 3 cents ;

(ii.) where a journey on the Kelani Valley Line extends beyond 20 miles or where a journey on the Puttalam and Coast Lines and the Maradana-Ragama portion of the Main Line extends beyond 25 miles, every fractional part of a cent shall be reckoned and charged for as one cent.

(*c*) A return journey between any two stations shall be charged for at one and a half times the fare for a single journey between those two stations.

(*d*) In calculating the fare for a return journey, any fractional part of 5 cents which is below 2½ cents shall not be reckoned or charged for and every fractional part of 5 cents equal to or above 2½ cents shall be reckoned and charged for as 5 cents.

Week-end tickets are issued between all stations distance 25 miles and over at 1⅓ single fares for the double journey. Reductions are made for children, pioneers, and labourers of any nationality, and for periodical tickets.

Sleeping Cars.

The sleeping cars which run on the Up and Down night mail trains between Colombo, Kandy, and Badulla, Colombo-Kankesanturai, Colombo-Trincomalee, and Colombo-Batticaloa are provided with sleeping accommodation. Each berth is numbered and provided with bedding and an attendant accompanies each car. The charge for a sleeping berth is Rs. 5 in addition to the ordinary first class fare to the station to which the journey is made.

In the Indo-Ceylon mail trains sleeping berths without bedding are provided for through first-class passengers without any extra charge, but berths are not guaranteed unless they have been reserved, for which a registration fee of Re. 1 per berth will be charged. If bedding is required Rs. 5 must be paid for each set of bedding at the time of booking, and a berth will be made up as a bed by the Car Attendant. In such cases no registration fee will be charged.

Sleeping berths without bedding are provided for second class passengers on the Colombo-Kankesanturai Up and Down night mail trains at Rs. 2·50 each and on the Colombo-Talaimannar Pier Up and Down night mail trains at Re. ½ each for through Indo-Ceylon passengers.

Return sleeping berth tickets at Rs. 6 each first class, and Rs. 3 each second class are issued to holders of week-end, ordinary return, and excursion tickets.

Restaurant Cars.

These are attached to the important trains on the Main, Coast, and Northern lines.

Photo by Werner Conitz. *Courtesy Govt. Tourist Bureau.*

ROAD TO KANDY–KADUGANNAWA.

Restaurant Rooms.

These are provided at Maradana, Polgahawela, and Nanu-oya on the Main line, Colombo Fort and Alutgama on the Coast line, and Anuradhapura on the Northern line. Refreshments at these places are supplied at moderate prices.

Refreshment Baskets.

Refreshment baskets can be supplied for any train from Colombo on giving 20 minutes' notice to the Manager, Restaurant Cars and Rooms, at his office at Colombo Fort Station.

Luggage.

Each adult passenger is allowed, free of charge, the following weight of luggage :—

	lb.		lb.
First class	112	Third class	56
Second class	84		

A free allowance of half these quantities is made for each child travelling with a half-ticket. No luggage will be conveyed free for children under three years of age who travel free.

A new Railway Time Table providing additional and accelerated trains was brought into force on November 8, 1937.

The journey to distant stations like Badulla, Kankesanturai, in this Time Table has been reduced by nearly 1½ hours.

With the arrival of Diesel Units early in 1938, it will be possible to provide a still faster service to the south of Ceylon. These Diesel Train provide better amenities of travel and will be a means of more comfortable travelling to third class passengers specially.

ROADS.

There are over 16,600 miles of roads and cart tracks in the Island controlled and administered by the following authorities :—

Authority.	Description of Roads.	Approximate Mileage.
(i.) Public Works Department ..	All main thoroughfares in the Island ..	4,816
(ii.) District Road Committees ..	All minor roads within the areas of jurisdiction of each Committee ..	3,000
(iii.) Local Governing Authorities, viz., Municipalities, Urban District Councils, Local Boards, Sanitary Boards, &c. ..	All streets within their respective jurisdictions	565
(iv.) Village Committees	All natural cart tracks within the jurisdiction of each Committee ..	7,800
(v.) Irrigation Department	— ..	70
(vi.) Private parties	— ..	350

In addition there are approximately 8,200 miles of bridle paths in the charge of the District and Village Committees.

The Public Works Department is the principal road authority in the Island and is responsible for the construction and maintenance of all the "Main roads", by which are meant through arteries connecting the principal centres of populations with one another and with the railways and ports.

The whole cost of construction, improvements, and maintenance of these roads is met from the general revenue of the Island.

The roads vary in standard from narrow country roads to wide modern thoroughfares, the standard depending on the nature of the country traversed and the traffic carried.

The following is the classification of the Public Works Department roads according to the nature of their surfaces :—

	Miles.
Full-metalled	4,107
Track-metalled	250
Gravelled	335
Natural	124
	4,816

The metalled roads are maintained in good order, and, with but few exceptions may be considered passable to all classes of traffic. Gravelled roads can be considered as dry weather roads only ; in dry weather they are generally in fair order, but they cannot be relied upon to the extent of metalled roads. A large mileage of the metalled roads is tarred or otherwise surface-treated. At the end of 1937 the length of roads so treated was 4,133 miles.

The only direct charge on road users is that for the use of ferry boats, but on the main roads with few exceptions the ferries have been replaced by bridges. Indirect charges are made in the form of import duties and taxes on wheeled vehicles.

The distribution of the main roads, distances between the principal centres, &c., can be ascertained on reference to the motor map of Ceylon, obtainable from the Surveyor-General, Colombo.

The distances from Colombo to other chief towns by road (given to the nearest half mile) are shown in the following list :—

Colombo to—	Miles.	Colombo to—	Miles.
Galle	72½	Batticaloa (*via* Badulla) ..	241
Peradeniya	68	Anuradhapura (*via* Matale) ..	158½
Kandy	72	Trincomalee (*via* Kurunegala) ..	169
Nuwara Eliya (*via* Peradeniya) .	112	Anuradhapura (*via* Puttalam) .	129
Nuwara Eliya (*via* Ginigathena)	106½	Jaffna (*via* Puttalam) ..	250

MEANS OF TRANSPORT BY ROAD.

The number of motor vehicles in Ceylon on December 31, 1930, was 24,405 ; it decreased during the years of depression to 23,359 on December 31, 1933. Owing to the revival of trade generally throughout the Island since 1934 there has been a steady increase in the number of motor vehicles. On December 31, 1937, there were 30,223 motor vehicles in the Island.

The average cost of running a small private car may be put at about 25 to 40 cents per mile. Hiring cars are available in most parts of the Island and cost 40 cents to Re. 1 per mile.

Drivers and mechanics for privately-owned cars can be obtained without difficulty and all drivers must hold the Government Certificate of Competence, while many are registered with the Automobile Association of Ceylon. Numerous factilities for repairs exists in Colombo, Kandy, Nuwara Eliya, and most of the other towns. Supplies of petrol and oil are available in all towns and in most of the larger villages.

The Automobile Association of Ceylon is affiliated or has reciprocal agreements with most of the Automobile Associations and Clubs in other countries and the Secretary (P. O. Box 338, Colombo) will afford any information which may be desired. The various landing, Customs, and registration formalities can be arranged for visitors by the Association. Facilities afforded by the International Convention relative to motor traffic are now available to Ceylon and a Ceylon TRIPTYQUE for

Customs purposes is available through the leading Automobile Institutions overseas. International Driving Permits, International Certificates of registration for Motor Vehicles, and Fiscal Permits are valid in Ceylon.

Motor Omnibuses.—There is a plentiful supply for motor omnibuses, known in England as road service vehicles, carrying passengers for hire and running on nearly every main road in the Island. The number of omnibuses in use during the year was 2,654.

On the recommendations of the Special Commission on Transport, whose report was made in May, 1937, legislation is being prepared to introduce centralized control of road motor transport, including the routes served by omnibuses and lorries.

The seating accommodation for passengers in motor omnibuses varies from 8 to 37.

Personal luggage of small dimensions and light weight is carried free of charge. Extra luggage is carried on the roof of the conveyance on payment of a fee.

Goods.—The chief means of transport of goods by road are the motor lorry and the local bullock cart. A double bullock cart is capable of taking 1½ tons at a time, and travels at the average rate of about 2 miles an hour. The cost per ton per mile may be put at about 80 cents. In the year 1934 there were about 22,424 single- and double-bullock carts in Ceylon, the majority of which were used in the transportation of village produce. Figures for 1937 are not available. Motor lorries are fast replacing bullock-carts in the movement of estate goods and in other industries. Lorries vary in load capacity from 5 cwt. to 5½ tons and travel at a speed of about 15 to 20 miles per hour, 15 miles being the legal speed limit for heavy lorries. They run mostly on petrol, a small number on steam or kerosene, some on crude oil, and a very few on charcoal. In 1937 there were 4,162 motor lorries and vans in Ceylon. The running cost can be kept at as low as 50 cents per ton per mile. The Diesel oil engine vehicles have been slowly gaining in popularity. The number of Diesel vehicles in Ceylon on December 31, 1937, was 321, as against 229 on December 31, 1936, and 149 on December 31, 1935. As Diesel vehicles run on crude oil which is imported free of customs duty, but a special tax on transport vehicles using uncustomed oil was imposed with effect from January 1, 1936, in order to recoup the resultant loss of revenue by way of import duty on petrol which would otherwise have been used on these vehicles. The present scale of this heavy oil tax is as follows :—

	Monthly Rate. Rs.	c.
Where the tare of the heavy oil motor vehicle—		
(a) does not exceed 1 ton	63	25
(b) exceeds 1 ton but does not exceed 1½ tons	69	0
(c) ,, 1½ ,, ,, 2 ,, ...	74	75
(d) ,, 2 ,, ,, 2½ ,, ...	80	50
(e) ,, 2½ ,, ,, 3 ,, ...	86	25
(f) ,, 3 ,, ,, 3½ ,, ...	92	0
(g) ,, 3½ ,, ,, 4 ,, ...	103	50
(h) ,, 4 ,, ,, 4½ ,, ...	115	0
(i) ,, 4½ ,, ,, 5 ,, ...	126	50
(j) ,, 5 ,, ...	138	0

Tramways.—The only street tramways in Ceylon are those in the town of Colombo, the total length of double track being 7¼ miles. There are two nearly equal routes : one between the Fort and the Kelani river terminus, and one between the Fort and Borella, joined by a cross line

between Maradana and Grandpass *via* Skinner's road and Armour street. The total number of passengers carried annually is estimated at about 13 millions.

CANALS.

The only artificial navigable waterways in Ceylon are a series of canals connecting a chain of lakes on the west coast—Bolgoda, Colombo, Negombo, Chilaw, Mundel, and Puttalam lakes—as also the estuaries of the Kalu-ganga, Kelani-ganga, Maha-oya, and Deduru-oya; thus forming a continuous waterway from Kalutara in the south to Puttalam in the north, a distance of approximately 120 miles. These were maintained in good order.

In addition to the foregoing there are about 41 miles of boat channel maintained by dredging the Jaffna lagoon.

POSTAL, TELEGRAPH, AND TELEPHONE SERVICE.

(Full information on this subject is to be found in the "Ceylon Post Office Guide", obtainable from the Postmaster-General, Colombo, price 75 cents.)

On December 31, 1937, 933 offices were opened for business. Details of the facilities afforded are as follows :—

178 Post Offices (excluding the Central Telegraph Office which does only telegraph business) dealt with all classes of postal business, viz., mail and parcel work, registration and insurance of postal articles, money order, postal order, and Savings Bank work, and telegraph and telephone business. Forty-seven Post Offices dealt with all classes of business except telephone work. One Post Office conducted all classes of business except value-payable and cash-on-delivery work and telephone work. Nine Post Offices dealt with all classes of postal business except telegraph and telephone work.

Fifty-four Sub-Post Offices conducted all classes of postal business except insurance, and also provided telephone-telegraph facilities. 148 Sub-Post Offices also conducted such business except telephone-telegraph work.

464 Village Receiving Offices dealt with mail work only. At 31 Railway Stations facilities for the despatch and receipt of inland postal telegrams were available. At 10 of these stations, mail work was also conducted.

There are 10,052 miles of telegraph wire (including railway telegraph wires), of which 2,734 are laid underground, and 54,585 miles of telephone wire (including Trunk and Junction lines) for subscribers' circuits, of which 37,900 are laid underground (excluding private estate lines).

MAIL SERVICES.

A regular weekly mail service is maintained between Ceylon and the United Kingdom and the continent of Europe and between Ceylon and Australia. Regular and frequent services are also available to the Straits Settlements and the Far East. Mails from Colombo to Mauritius *via* Batavia are despatched fortnightly. Direct mail to Mauritius is

Photo by Werner Conitz. *Courtesy Govt. Tourist Bureau.*

KANDY LAKE.

also sent at very irregular intervals. There is also a direct service not less than twice a month between Ceylon and South Africa. Mails from Ceylon to East Africa are despatched fortnightly *via* Bombay and direct twice a month. The mail service by train is maintained daily between Ceylon and India *via* Talaimannar.

Air Mails.—There are two despatches a week of air mail articles from Colombo to connect with the bi-weekly despatch from Karachi westwards. These two despatches are forwarded by rail to Madras, and from thence, by the combined Indian Internal and Imperial Airways Services, the countries served by these services being the United Kingdom, countries in Europe, Egypt, and North Africa, South and East Africa, Canada and the United States of America. Correspondence intended for conveyance by the Internal Air Services of certain countries (viz., United States, Dutch East Indies, and Australia) are also despatched weekly. Air mails for Australia are forwarded weekly *via* Singapore to connect there with the air service to Australia.

Indian mails are carried generally by the Ceylon Government Railway and from railway stations by private contract motor mail services, bullock coach, or runner services.

Rates of Postage.

Inland Rates and Rates to India.

	Cents.		Cents.
For letters, per 2 ounces or part of that weight	6	For registered newspapers not weighing more than 2 pounds, for every 8 ounces	2
For post cards, each	3		
For printed matter, per 2 ounces or part of that weight up to a maximum of 2 pounds	2		

Rates to the United Kingdom, British Possessions, and Egypt.

	Cents.		Cents.
For letters, per ounce or part of that weight	9	For printed papers, per 2 ounces or part of that weight	3
For post cards, each	6		

Rates to Foreign Countries (excluding Egypt).

	Cents.		Cents.
For letters, for the first ounce ..	20	For post cards, each	12
For every additional ounce or part of that weight	10	For printed papers, per 2 ounces or part of that weight	4

Inland Cash-on-Delivery System.

Postal articles can be transmitted by the Inland post on the value-payable system provided that the amount payable is not less than 50 cents or more than Rs. 600. A posting and delivery fee of 5 to 15 cents, according to value, will be levied on every value-payable article.

Foreign Cash-on-Delivery System.

The Cash-on-delivery Service is in operation between Ceylon and the United Kingdom, the Straits Settlements, the Federated and Unfederated Malay States, Germany*, and Burma. Details will be found in the "Ceylon Post Office Guide".

* The outward service with Germany is temporarily suspended.

Air Mail Parcels.

Air mail parcels addressed to any post office in Great Britain or Northern Ireland for despatch by air from Karachi shall be accepted at all post offices which accept foreign parcels. Details in "Post Office Guide" (Ceylon).

Money Orders.

Money Orders can be obtained at any of the Post Offices payable at any of the others and in most foreign countries. The maximum for inland and Indian Money Orders is Rs. 600, for foreign orders £40 except in certain special cases where the maximum is below this amount. The rate of commission for inland Money Orders is 10 cents for each complete sum of Rs. 10 and 10 cents for the remainder, and for Burmese and Indian Money Orders 20 cents for each complete sum of Rs. 10 and 20 cents for the remainder. The rate for foreign Money Orders expressed in sterling is 25 cents on sums not exceeding £1, and on sums exceeding £1, 15 cents for each complete sum of £1 and 15 cents for the remainder. Money Orders payable in the United Kingdom or countries served through the United Kingdom can be despatched by Air Mail on payment of a fee of 15 cents in addition to the ordinary money order commission. Telegraph Money Orders can be despatched in the inland service. Telegraph Money Order service is also available to Burma, India, and some other foreign countries, a fixed fee of 10 cents irrespective of the amount of the order is charged for inland Burmese and Indian Telegraph Money Orders. There are fixed minima for Telegraph Money Orders according to the currency in which the order is advised. Details will be found in the "Ceylon Post Office Guide".

Postal Orders.

Inland Postal Orders for fixed amounts ranging from 50 cents to Rs. 10 are issued, the rate of commission varying from 3 to 10 cents.

British Postal Orders.

There are 40 denominations of British Postal Order, ranging from 6*d*. to 21*s*., the difference between each up to 19*s*. being 6*d*., and 1*s*., between 19*s*. and 21*s*. Commission is charged at the rate of 10 cents on each of the first five denominations, 15 cents on each of the next twenty-five, and 20 cents on each of the remaining denominations. A full list of the countries to which British Postal Orders can be sent is given in section IX. of the "Ceylon Post Office Guide". Broken amounts up to 5*d*. (but not including fractions of a penny) may be made by affixing unused Ceylon postage stamps of equivalent value or British penny postage stamps not exceeding two in number in the spaces provided on the order.

Inland Telegrams.

The minimum charge for Inland ordinary telegrams is 50 cents for the first twelve words, including the address, and 5 cents for each additional two words or less. These telegrams can be sent from any one telegraph office to any other in the Island.

The charge for Urgent telegrams is Re. 1 for the first twelve words, including the address, and 10 cents for each additional two words or less.

Photo by V. Namasivayam. *Courtesy Govt. Tourist Bureau.*

DIYALUMA FALLS.

Greetings and Condolence telegrams can be sent at reduced rates on such occasions as Christmas, New Year, Wesak, Hindu New Year, Id, Birthdays, Birth of a child, Weddings, and Funerals and Deaths. The text of such a telegram should be a phrase selected from the list of stock phrases appearing at the end of rule 419A of the Ceylon Post Office Guide. The entire text is counted as one word for the purpose of the collection of charges. The charges are 30 cents for each such telegram consisting of not more than six words and 5 cents for each additional word in the name and address of the addressee or of the sender. For fuller details, see the rule already quoted.

Foreign and Colonial Telegrams.

The rates for telegrams to India are express Rs. 2, and ordinary Re. 1 for the first 12 words or less, and 15 cents and 10 cents respectively for each additional word.

The rates for telegrams to Burma are 18 cents and 36 cents per word for ordinary and urgent with a minimum charge for 8 words rounded up to the next multiple of five cents.

Telegrams to places in other British Possessions and foreign countries can be sent on a minimum charge per word varying from 65 cents to Rs. 3·65 for ordinary, and from 45 cents to Re. 1·85 for deferred telegrams according to the distance of the place of destination, the route by which the telegram is to be sent, &c. A full list of places to which foreign and Colonial telegrams can be sent, together with the rates charged, is given in section 11 of the "Ceylon Post Office Guide".

Foreign Cheap Rate Telegrams.

Telegrams in plain language are accepted for transmission as "Night Letter Telegrams" or "Daily Letter Telegrams" to various places abroad at considerably reduced rates. A list of places to which this service is available, and the scale of charges will be found in section 11 of the "Ceylon Post Office Guide".

Radio-Telegrams.

Radio-Telegrams are accepted at any Postal Telegraph Office in Ceylon for transmission to ships equipped with radio-telegraph apparatus through the Coast Station in Colombo. Radio-telegrams to His Britannic Majesty's Ships of War may also be sent through Matara Radio.

The charges are as follows :—

	Per Word. Cents.
British Indian, or Colonial Government telegrams to His Britannic Majesty's Ships of War *via* Colombo radio or *via* Matara Radio	Free
Private telegrams to His Britannic Majesty's Ships of War—	
Via Colombo Radio ..	40
Via Matara Radio ..	25
All other Government or private telegrams *Via* Colombo Radio only ..	65
On Radio Telegrams sent to—	
(*a*) Spanish and Swedish ships the charge is	60
(*b*) Finnish ships the charge is ..	50

The normal range of the Colombo Radio Station is 500 miles or about two days steaming from or to the port of Colombo, but this distance is considerably exceeded when conditions are favourable and also according to the equipment on board the ships.

With ships fitted with the Short Wave System, communication is possible for a few thousand miles. Ships not so fitted can be reached through those having the facility.

Telephone System.

Telephone communication exists between most of the principal towns and certain rural districts. The towns are generally served by Government exchanges and the rural districts by Government or private licensed exchanges which are connected to the general trunk system by means of Government junction lines.

The charge for the use of a public call box for six minutes or less is 10 cents, and for the use of the trunk and junction lines for three minutes or less on day calls between 6 A.M. and 6 P.M., and for six minutes or less on night calls between 6 P.M., and 6 AM., the charge is as follows :—

	Cents.		Cents.
For 15 miles or under ..	15	Over 32½ miles and not exceeding 60 miles	50
Over 15 miles and not exceeding 32½ miles	25	Every additional 25 miles or part of a mile	25

The minimum annual rental for a telephone connection to a large town exchange is Rs. 180 for business or professional purposes and Rs. 120 for non-business or residential purposes and for a connection to a small town exchange Rs. 125 and Rs. 90 respectively.

Broadcasting Service.

The Government maintains a regular broadcasting service on a wave-length of 428·5 metres (700 KCS) with a transmitter radiating 5 K.W. situated in Colombo. Evening programmes are simultaneously broadcast on a shortwave wave-length of 48·7 metres (6,160 Kilocycles).

Programmes consisting of music, talks and news are broadcast in English, Sinhalese, and Tamil. Empire programmes from Daventry are relayed and broadcast almost daily.

The number of radio receiving licences in force at the end of 1937 was 4,911, as against 3,873 at the end of 1936.

There is a regular broadcast to schools conducted by the Department of Education.

CHAPTER XII.

Public Works.

Since the introduction in July, 1931, of the new Constitution for the Island under the Ceylon (State Council) Order-in-Council, 1931, the Public Works Department is placed under the immediate control of the Executive Committee of Communications and Works.

There was an increase of expenditure in 1937 on that of the previous years. The total expenditure by the department amounted to Rs. 10,716,541, as against Rs. 10,084,041 during the previous year (1935–36).

Maintenance.—The roads, bridges, canals and public buildings in charge of the department were maintained in satisfactory condition having regard to the funds available.

New Works.—The following are the more important works completed or in progress during the year :—

New Buildings and Additions and Improvements to Buildings.

Drill Hall for the Ceylon Planters' Rifle Corps Headquarters, Colombo.
Additions to Ceylon Defence Force building, Slave Island.
New breakfast room, Government Press, Colombo.
Quarters for 40 married Sergeants and Constables, Slave Island.
Extensions Surveyor-General's Office, Colombo.
Bacteriological Institute, Colombo.
New Nurses' Home, General Hospital, Colombo.
Block of 12 rooms for paying patients, Lunatic Asylum, Angoda.
Drainage, Ragama Anti-Tuberculosis Hospital.
Ward of 40 beds, Ragama Anti-Tuberculosis Hospital.
Two additional temporary wards of 50 beds each, Leper Asylum, Hendala.
Second stage of extensions, De Soysa Lying-in Home, Colombo.
Laboratory Workshop and office accommodation for the Expert Adviser on Industries and his staff, Colombo.
Model Coir Yarn Factory.
Maradana Industrial School.
Extension to Ceylon Technical College.
Additions and improvements to Government Stores, Colombo.
Improvements to water supply, Welikada Jail.
Cattle Quarantine Station, Colombo.
Additions to Government Dairy, Colombo.
Malaria Institute of Ceylon.
Water supply, Kandana Sanatorium.
Water supply, Moratuwa Hospital.
Extension to sisters' quarters, Hendala Leper Asylum.
Additions to Lunatic Asylum, Angoda.
Two Light construction wards, General Hospital, Colombo
Light construction ward, Lady Ridgeway Hospital.
Two light construction wards, Anti-Tuberculosis Hospital, Ragama.
Additions to Government Training College, Colombo.
Accommodation for Telegraph Stores at the old Railway Workshops.
Bungalow for the Director of Agriculture, Peradeniya.
Dairy Farm, Polonnaruwa.
Additions to Agricultural Department, Peradeniya.
Additions to Farm School, Peradeniya.
New Record Room, Additional District Court, Kandy.
Water supply, Deltota Hospital.
Additions and Improvements to Kandy Hospital.
Quarters for matron and nurse, Teldeniya.
Special repairs, Alutnuwara Hospital.
Dambulla Hospital water supply.
Additional requirements, Dairy Farm, Polonnaruwa.
Improvements to water supply, Kandy Hospital.
Water supply, Mulhalkelle Hospital.
Extensions to maternity ward, Matale Hospital.
Dispensary and Apothecary's quarters, Kotmale.
Improvements to Government buildings, Hatton.

Additions to Hambantota Kachcheri.
Additions to Central Agricultural Station, Labuduwa—accommodation for village boys.
New Hospital, Hambantota.
New female ward, Walasmulla Hospital.
Maternity ward, Balapitiya Hospital.
New roof, Hambantota Residency.
New store, Central Agricultural Station, Labuduwa.
Cottage Hospital, Talawa.
Light construction ward, Matara Hospital.
New Village Tribunal Court-house, Opata.
Kachcheri, Vavuniya.
Cottage Hospital, Kahatagasdigiliya.
Paddy store, Paranthan.
Cottage Hospital, Murunkan.
Additional ward, Delft Hospital.
Maternity ward, Chavakachcheri Hospital.
Improvements to Jaffna Customs.
Additional storeroom for bottled arrack, Jaffna Excise Warehouse.
Quarters for Excise Guards, Elephant Pass.
Extensions to maternity ward, Mannar Hospital.
Extensions to Chavakachcheri Hospital.
Maternity ward, Mullaittivu Hospital.
Special repairs to Civil Hospital, Jaffna.
Village Tribunal Court-house, Vakarai.
Cottage Hospital, Muthur.
Cottage Hospital, Akkaraipattu.
New Residency, Trincomalee.
Extensions to Trincomalee Hospital.
Additions and improvements to Assistant Veterinary Surgeon's quarters, Akkaraipattu.
Improvements to water supply, Mantivu Leper Asylum.
Improvements to cottages, Mantivu Leper Asylum.
Water supply, Kalmunai Hospital.
Dispensary and Apothecary's quarters, Pottuvil.
Drainage, Batticaloa Hospital.
Rat-proof store, Maho Experimental Station.
Rat-proof store, Ganewatta Experiment Station.
New Court-house, Kurunegala.
Office, stores, &c., Telegraph Inspectors, Polgahawela.
Maternity ward, Chilaw Hospital.
Drainage, Marawila Hospital.
Drainage, Chilaw Hospital.
Extension to Badulla Hospital.
Additions and improvements to Badulla Kachcheri.
Extension of the office of the Registrar of Lands, Badulla.
Additions to the District Medical Officer's quarters, Buttala Hospital.
Painting of huts Ceylon Defence Force Camp, Diyatalawa.
Additions and improvements to Survey Camp, Diyatalawa.
Passara water supply augmentation.
Extension to Record Room, Court-house, Kegalla.
Water supply to Government Farm, Ambepussa.
Maternity ward, Aranayaka Hospital.

TEA PLUCKERS BRINGING LEAF TO FACTORY.

Bridges.

Bolgoda bridge on 5th mile, Panadure-Nambapana road.
Wellawatta bridge, Colombo-Galle road.
Bridge on the approach road to the Angulana Railway Station.
Pamankade bridge—temporary widening of end spans.
Improvements to platform of Giriulla bridge, Negombo-Giriulla road.
Pamunugama bridge, 9th mile, Hamilton canal.
Footbridge over Mahaweli-ganga at Peradeniya.
Reconstruction of bridge No. 28/4, Madawela-Teldeniya-Nugetenne-Bintenne road.
Widening of bridge at Mandandawela, Matale Town, Kandy-Jaffna road.
Widening of bridge No. 1/3, Matale-Udupihilla road, Matale Town.
Widening bridge No. 15/3, Maradankadawela-Habarana road.
Fixing steel treads, Galoya bridge, 70th mile, Kandy-Trincomalee road.
Fixing steel treads, Alut-oya bridge, 76th mile, Kandy-Trincomalee road.
Katugastota bridge.
Widening Scandal Corner bridge, 1st mile, Lake and Moon Plains road, Nuwara Eliya.
Reconstructing bridge No. 20/4, Uda Pussellawa road.
Strengthening Kahawaturai bridge, Nawalapitiya-Hatton-Maskeliya road.
Reconstructing Seenimodera bridge, Colombo-Galle-Hambantota road.
Rebuilding bridge No. 121/3, Colombo-Galle-Hambantota road.
Reconstructing bridge No. 10/9, Matara-Hakmana road.
Bentota bridge.
Hikkaduwa bridge.
Causeway over Aruvi-aru on the Murungan-Silavaturai road.
Reconstruction of Valukkai-aru bridge, 5th mile, Jaffna-Karativu road
Extension to bridge No. 1/1, Paranthan-Karachchi road.
Renewing platform of bridge No. 6/3, on the Coast road (Vellankulam-Marichikaddi).
Bridge No. 28/2, Karativu-Samanturai road.
Salt Lake bridge No. 5/1, North Coast road, Trincomalee.
Reconstructing bridge No. 27/3, South Coast road.
Reconstructing bridge No. 7/1, Kurunegala-Puttalam road.
Improvements to Kuda-oya bridge, 3rd mile, Maharagama-Polgahawela road.
Improvements to bridges Nos. 6/7 and 6/8, Kuliyapitiya-Hettipola road.
Reconstructing bridge No. 5/5, Bibile-Medagama road.
Improving bridges Nos. 114/1 and 119/5, Haldummulla-Wellawaya-Moneragala road.
Extension of bridges Nos. 39/2, 53/6, 54/1 and 54/8 on Kendangamuwa-Pelmadulla road.
Strengthening bridge No. 3/7, Pasyala-Giriulla road.
Renewing bridge No. 39/4, Colombo-Avissawella road.
Reconstructing bridge No. 96/3, Madampe-Hambantota road.

New Roads.

Extension of Kukul Korale road from Badureliya towards Kalawana.
Approach road to Pallewela Railway Station.
Cart road from Hendala to Uswetakeiyawa.
Approach road to Kirillapone Railway Station.
Pungudutivu causeway.
Jaffna-Pooneryn causeway.
Welimada-Kirklees road.

Additions and Improvements to Roads.

Improvements to 1st mile, Ratmalana-Attidiya road.
Widening narrow portions of Kandy-Haragama-Kurunduoya road.
Widening and improving miles 19-20, Madulkele to end of Bambara-ela.
Widening and improving miles 12, 15-17 and 20, Katugastota-Madulkele Kabaragala road.
Improvements to road platform and culverts on miles 4, 6, 8 and 9, Ukuwela-Elkaduwa road.
Improving corners on miles 22-38, Palapatwela-Galawela road.
Improving corners on miles 22-31, Palapatwela-Yatawatte road.
Widening and improving dangerous corners on 36th and 40th miles, Kandy-Badulla road.
Raising section of road at 11½ mile, Peradeniya-Gampola road.
Widening dangerous corners, Peradeniya-Ramboda road.
Widening and improving roads, Talawakele Town.
Widening road embankments, 76-78 miles, Colombo-Galle-Hambantota road
Improving road embankments, 15th and 16th miles, Hambantota-Wellawaya road.
Widening between 91¾ and 92 miles, Colombo-Galle-Hambantota road.
Improvements to Coast road to Colombo.
Widening miles 152–159 and 197 & 198, Kandy-Jaffna road.
Improvements to miles 3 and 11, Point Pedro-Kudathanai-Marthankerni road.
Constructing 3 culverts, Mullaittivu-Puliyankulam road.
Metalling and improving 13th mile, Mannar-Pesalai-Talaimannar road.
Construction and extension of culverts, Puttalam-Trincomalee road.
Widening and improving road sides, 19th and 20th miles, South Coast road.
Improvements to 70th mile, Batticaloa-Trincomalee road.
Widening and improving Bazaar street, Kurunegala.
Widening and improving Puttalam road, Kurunegala.
Widening Alawwa-Polgahawela road.
Widening and improving 3-22 miles, Kurunegala-Dambulla road.
Protection of road at Hangili-ela, 69th mile, Kandy-Badulla road.
Widening and rebuilding culverts, Bandarawela-Haputale road.
Widening between and extension of culverts, Badulla-Batticaloa road.
Widening 56th and 58th miles, Colombo-Avissawella-Haputale road.
Extending and rebuilding culverts, Warakapola-Ruanwella road.
Widening and improving 49th mile, Colombo-Kandy road.
Extending and re-building 7 culverts and erecting new bridge on 4th mile, Gevilipitiya-Hettimulla road.
Improvements to Ambepussa-Alawwa road.
Improving small span bridge, No. 29/6, Colombo-Avissawella road.
Improvements to 3rd to 5th miles, Balangoda-Kaltota road.
Improvements to Pelmadulla-Halpe road, miles 70 to 90.

Improvements to Minor Roads.

Reconstruction of bridges Nos. 4/1 and 4/2, Udupila-Giridara road.
Improvements to bridge No. 6/1, Cotta-Padukka road.
Improving 6th mile, Cotta-Padukka road.
Reconstructing bridge No. 8/1, Agalawatta-Badureliya road.

Improvements to miles, 24 to 28½, Rattota-Nicholoya road.
Improvements to Ganewalpola-Galenbindunuwewa (Eastern Minor road).
Bridge No. 2/2, Tangalla-Wiraketiya road.
Bridges Nos. 5/8 and 7/3, Beliatta-Walasmulla road.
Bridges Nos. 20/7 and 20/8, Kumburupitiya-Mawarella road.
Bridge No. 13/1, Labaduwa-Wanduramba-Sandarawela road.
Improving Uyilankulam-Alkattiveli road.
Improvements to 1st, 2nd, and 4th miles, Velikulam-Mamaduwa road.
Construction of culverts on miles 27-29 and 34-36, Tammuttegama-Timbiriwewa road.
Improvements to miles 1 and 3, Chavakachcheri-Thanankilappu road.
Improvements to Paddiruppu-Kurumanvelly road.
Improvements to bridge No. 4/2, Kahawatta-Bemulgedera road.
Rebuilding culverts, Mahawattagama-Barandara road.
Reconstruction of bridge No. 2/3, Dankanawa-Kirimetiyana road.
Reconstruction of bridges Nos. 3/8 and 4/2, Dambokka-Katupitiya road.
Reconstruction of bridge No. 5/2, Kahawatta-Bemulugedera road.
Improving 6 and 7 miles, Kahawatta-Bemulugedera road.

Raising Roads Above Flood Level.

Raising section of 21st and 22nd miles, Colombo-Avissawella road
Raising sections of 25th mile, Horana-Anguruwatota Ferry-Alutgama road.
Raising culvert No. 6/1, Colombo-Negombo road.
Raising 6th and 7th miles, Puttalam-Trincomalee road.
Raising 42nd mile, Avissawella-Ginigathena road.
Raising 14th mile, Pindeniya-road.
Raising 42nd mile, Karawanella-Glenella road.
Raising 59th mile, Colombo-Avissawella-Haputale road.

Loan Works.

Extension of the Central Telegraph Office building to house the new Automatic Exchange.
New Post Office and Automatic Exchange at Maradana.
Post Office and Automatic Exchange, Havelock Town.
Training School for Youthful Offenders at Wathupitiwela.
Construction of Hayes-Lauderdale road (Southern section).
Construction of Hayes-Lauderdale road (Sabaragamuwa section).

Works Carried out from Votes of Other Departments.

Waggalamodera Drainage Scheme—Construction of culvert on Colombo—Galle-Hambantota road.
Reinforced concrete foundation for new engine and repairs to power house, Trincomalee.
Improvements to Zoological Gardens, Dehiwala.
Repairs to proposed office for the Commissioner for Development of Agricultural Marketing.
Alterations and renovation of Old Town Hall market.

Miscellaneous.

New Aerodrome at Ratmalana.
Motor boat service between Jaffna and Delft.
Karaiyur Reclamation Scheme.
Improvements to waterworks, Mannar.

P. W. D. Private Account.

Children's ward, Kandana Sanatorium.

Waterworks.

Improvements to water supplies at Badulla, Batticaloa, Chilaw, Gampola, Kurunegala, Mannar, and Wattegama.

IRRIGATION.

Early History.—From the earliest period in the history of the Island the importance of conserving water for irrigation has been recognized. Historical records indicate that the construction of the necessary tanks and channels came to be regarded as a special and solemn duty assigned to the King for promoting the wealth and welfare of his subjects, and that in proportion to the zeal with which different monarchs had exercised this prerogative their names were venerated. The remains of extensive and intricate networks of tanks and canals can be found to-day in every part of the Island. Though it is unlikely that all these various irrigation systems ever existed simultaneously in full working order, it is clear that the ancient engineers realized the principles of conserving on a very large scale the intermittent supplies carried by the main rivers, and with the advantage of an unlimited command of labour and an intimate knowledge of their terrain, though handicapped by the primitive nature of their technique and appliances, they made valiant and often successful efforts to apply them.

Decay and subsequent Growth.—Indigenous irrigation activity and agricultural prosperity seem to have reached their zenith about the twelth century A. D. From then onwards to the modern era Ceylon was not infrequently ravaged by internal warfare and pestilence. No large irrigation work was constructed in this peroid, and, until the advent of the Dutch and subsequently of the British, the works already built were allowed to fall into disuse and disrepair. There is probably no form of civil engineering work that demands more constant and unremitting attention to its maintenance than that connected with the control of water, and it is not difficult to appreciate that without such attention the once great irrigation works very rapidly succumbed to the onset of floods and the ceaseless inroads of the jungle. In modern times many of the old irrigation works have been restored to active usefulness. There are yet others embedded in the jungle which await restoration as and when occasion arises.

Importance of Irrigation.—The importance of irrigation in Ceylon is due to two causes, one dietetic and the other climatic. Rice is the staple food of the people and its cultivation, though not always remunerative, has, through secular and religious encouragement, acquired a definite social status as the national agricultural industry. Rice practically grows in water, and although the rainfall in the Island is generally adequate in total amount, its seasonal incidence is uncertain. Rice cultivation cannot succeed if it depends solely on the vagaries of such rainfall, and the construction and maintenance of artificial means of diverting and conserving water are manifestly essential.

andronicus publishing

FULL BAG OF SNIPE AND TEAL.

company, inc.

Classification of Irrigation Works.—The total area under paddy in Ceylon to-day is approximately 800,000 acres, which may be divided into four main categories according to the system of irrigation practised in each :—

		Approximate Area. Acres.
I.	Major works	160,000
II.	Minor works : Village tanks	200,000
III.	Do. Village channels	170,000
	Total under artificial irrigation	530,000
IV.	Direct rainfall	270,000
	Total ..	800,000

The owners of land under major works are required to contribute, by an assessed annual rate, towards the cost of construction and maintenance of the works. The "construction rate" is generally a very small percentage of the capital cost of the work and the "maintenance rate" not infrequently produces considerably less revenue than the actual expenditure incurred by Government on the maintenance of the work.

Minor works, both tanks and channels, are maintained by the villagers themselves under the general supervision of Government officials and with the tangible and often considerable assistance of Government. The fourth category covers lands that, being situated in localities of evenly distributed rainfall, are able with reasonable chances of success to dispense with artificial irrigation. The trouble on these lands is often the super-abundance of water rather than its deficiency, and drainage rather than irrigation their particular need.

Progressive Development of Activities.—When the Irrigation Department was created in 1900 it was assigned the engineering duties of operating and maintaining those major works which had already been restored in whole or part, and of restoring a selection of old abandoned works under which the prospects of development appeared to be favourable. The administrative side of these works and the general responsibility for all minor irrigation works remained the function of the revenue officers, with such advice and assistance as they required from the Irrigation Department. Under this regime steady progress was made with the extension and improvement of irrigation service under major works, and latterly the engineering resources of the department have been applied in a rapidly increasing degree to the improvement of minor irrigation tanks and channels on modern scientific lines. Another development of the department's functions, which is rapidly acquiring considerable importance, is the construction of schemes for preventing or abating floods, for improvement of drainage conditions on irrigable lands, and for exclusion of sea-water therefrom. With this development the department has become directly interested in all the four categories of irrigation in Ceylon and the scope of its service has correspondingly widened.

Irrigation Works.—Under the present Constitution the department is under the general control of the Executive Committee of Agriculture and Lands, and a progressive policy of active development is being pursued.

5——J. N. 77053 (8/38)

The summarized expenditure under the different services during 1936-37 is as follows :—

	Rs.	c.
Personal Emoluments	731,348	49
Other Charges (surveys, tools, transport, &c.)	362,789	21
Maintenance—		
Major works	285,064	2
Village works	21,984	83
Roads	55,574	3
Construction—		
Major works	766,443	95
Village works	201,220	20
Relief Schemes	11,183	96
Department of Fisheries : Fresh water fish culture	17,293	82
Surveys done by the Survey Department for the Irrigation Department	120,450	0
	2,573,352	51

New Development Schemes.—As the last item in the foregoing summary suggests, the foundations are being laid for a much more extensive expansion of future irrigation policy. The engineering surveys of all large irrigation projects are now carried out by the Survey Department on lines specified by the Irrigation Department. The latter is thus provided with excellent plans, topographical, contour, and detailed, on which the whole of the scheme in all its detail can be laid down in advance, and the costly errors that have sometimes been made with other large projects, started without adequate data, are effectively prevented. In addition to the engineering surveys, a survey is also carried out by the Agricultural Department to investigate the nature of the soils covered by the scheme, and to make a preliminary classification of the constituent areas according to their suitability for paddy or other crops.

In the loan recently floated the sum of Rs. 15 million is included for irrigation works, and already schemes of an aggregate estimated cost of about half this sum are approaching the construction stage.

Modernization of Construction.—In order to expedite the completion of these new schemes to a stage at which their benefits to agricultural development can be utilized serious consideration is being given to the question of using modern power-driven plant on a large scale. The department has recently purchased three Diesel-driven Excavators and a Diesel Tractor (Caterpillar) and Grader and these machines are being tried out on various works. The results to date are sufficiently satisfactory to justify further and more extensive trial, and in addition to the use of these machines on purely engineering construction it is probable that their economic suitability for the operations of clearing and asweddumizing jungle land will be tried out under actual working conditions.

Research and Training.—The Research Laboratory has been built and its practical value has been put to very satisfactory tests.

Scope of future Developments.—Ceylon is essentially an agricultural country, and as such has been well endowed by nature with all material factors for the creation of a prosperous industry. These factors need proper development, however, and none of them more so than those connected with the control and conservation of the Island's lavish resources in water. Apart from the ultimate object of producing the staple food of the country in sufficient quantity to meet her own consumption, a forward policy in irrigation development will restore the paddy industry to its traditional prestige and natural importance, and enable the resettlement of a happy and contented peasantry on the land.

A JUNGLE RIVER.

CHAPTER XIII.

Justice and Police.

The Judicial System of Ceylon.

Supreme Court.—The Supreme Court consists of a Chief Justice and eight Puisne Judges. It has appellate and revisional jurisdiction in civil cases from all courts except Village Tribunals. It exercises no original jurisdiction in civil cases. Under Ordinance No. 2 of 1891 it is a Colonial Court of Admiralty.

The Supreme Court has original jurisdiction in all criminal cases and exclusive jurisdiction in respect of the more serious offences, such as homicide, rape, and the graver types of housebreaking and robbery. In practice it seldom tries cases which do not fall within its exclusive jurisdiction. It usually sits with a jury and tries cases committed for trial by a Police Court. It exercises appellate and revisional jurisdiction over all criminal courts except Village Tribunals. The Supreme Court may pass any sentence authorized by law. It has also the power to issue writs of *habeas corpus, mandamus, quo warranto,* &c., and also to disenrol Advocates and Proctors who are found guilty of deceits, crimes or malpractices. Special jurisdiction is conferred on the Supreme Court to hear election petitions.

District Courts.—The District Courts, of which there are at present 21 in the Island, have unlimited original civil (including testamentary and matrimonial) jurisdiction and criminal jurisdiction in respect of all offences which are not within the exclusive jurisdiction of the Supreme Court. District Courts try only cases committed to them for trial by Police Courts*. District Courts may pass any of the following sentences :—

(*a*) Imprisonment of either description for a term not exceeding two years ;
(*b*) Fine not exceeding one thousand rupees ;
(*c*) Whipping ;
(*d*) Any lawful sentence combining any two of the sentences aforesaid.

When a person is convicted at one trial of any two or more distinct offences the aggregate punishment it can award is twice the punishment mentioned above.

Under sections 3 and 4 of Ordinance No. 2 of 1891 the Governor has power to appoint a District Court to have a limited Admiralty jurisdiction. The District Court of Colombo alone has been appointed to exercise such jurisdiction.

Police Courts.—There are 30 Police Courts and 3 Municipal Courts in the Island. The offences which a Police Court may try are specified in the schedule to the Criminal Procedure Code, 1898. Various

* Under section 152 of the Criminal Procedure Code, a Police Magistrate who is also a District Judge may, in the course of an inquiry into an offence which is triable by a District Court, proceed to try such offence summarily when he is of opinion that it can properly be so tried. In such a case there is no previous committal.

Ordinances have also made other offences triable by a Police Court. A Police Court may not pass a sentence heavier than the following, except where an Ordinance has specially empowered it so to do :—

(*a*) Imprisonment of either description for a term not exceeding six months ;
(*b*) Fine not exceeding one hundred rupees ;
(*c*) Whipping, if the offender is under 16 years of age ;
(*d*) Any lawful sentence combining any two of the sentences aforesaid

When a person is convicted at one trial of any two or more distinct offences the aggregate punishment it can award is twice the punishment mentioned above.

Police Courts also hold preliminary inquiries into crimes with a view to committal for trial by a District Court or the Supreme Court. If after inquiry a Police Magistrate is of opinion that an accused should be discharged he makes order to this effect. Where a Magistrate is of opinion that an accused should be committed for trial to a court of competent jurisdiction, the record of the proceedings at the inquiry is forwarded to the Attorney-General, who directs the Police Magistrate to commit the accused or to discharge him.

A special jurisdiction is conferred on Police Courts to make orders for the maintenance of wives and children.

Courts of Requests.—Courts of Requests have original civil jurisdiction (subject to certain exceptions) in all actions in which the debt, damage, or demand or value of the land in dispute does not exceed Rs. 300.

There are 30 Courts of Requests in the Island, of which one (the Colombo Court) is presided over by a separate Commissioner. All the others are presided over by a District Judge or a Police Magistrate who acts as Commissioner of Requests in addition to his duties as District Judge or Police Magistrate.

Village Tribunals.—Village Tribunals have civil jurisdiction in actions in which the debt, damage, or demand or the value of the land in dispute does not exceed Rs. 20, or, where both parties consent, Rs. 100 and in cases between a Co-operative Society and its members. Village Tribunals have criminal jurisdiction to try breaches of rules made by the inhabitants of the subdivision or the Village Committee under section 29 of Ordinance No. 9 of 1924, and various minor offences enumerated in the schedule to Ordinance No. 9 of 1924. A Village Tribunal may impose a fine not exceeding Rs. 20 or 14 days' imprisonment in default of payment.

A Village Tribunal is presided over by a paid President appointed by the Governor. He sits with three councillors chosen by lot. In the case of a difference of opinion between the President and the councillors, the opinion of the President prevails (section 50 of Ordinance No. 9 of 1924).

There are 220 Village Tribunals in the Island, namely, 24 in the Western Province, 36 in the Central, 50 in the Southern, 6 in the Nothern, 22 in the Eastern, 21 in the North-Western, 15 in the North-Central, 17 in the Uva, and 29 in the Province of Sabaragamuwa.

Village Committees.—Village Committees in subdivisions, where no Village Tribunal has been established, have power to try breaches of rules made by the inhabitants of the subdivision or the Village Committee under section 29 of Ordinance No. 9 of 1924, and have the same power of punishment as Village Tribunals.

DIAGRAM No. 10

CRIME IN CEYLON 1914-1937.

Printed and Printed by Survey Dept. Ceylon. 16. X. 38.

DIAGRAM No. 10

CRIME IN CEYLON 1914-1937

There are 49 Village Committees exercising this jurisdiction in the Island, namely, 48 in the Northern Province and 1 in the North-Western Province.

The following schedule gives detailed information as regards the number of Courts, the number of Judges, Magistrates &c. :—

Number of Courts, Judges, &c.

Court.	Number of Courts.	Number of Judges.	Remarks.
Supreme Court	1	9	One Chief Justice and eight Puisne Judges
District Court	21	28	There are four judges for the District Court of Colombo and two each for those of Kandy, Galle, and Jaffna. There is one judge for the District Courts of Chilaw and Puttalam, one for those of Nuwara Eliya and Hatton, and one for those of Mullaittivu and Vavuniya. Eleven of these officers are Police Magistrates and Commissioners of Requests in addition to their duties as District Judges. Two are supernumerary judges.
Police Court	30	20	There are three Magistrates sitting at Colombo. The following groups of Courts have one Magistrate each :— Badulla, Bandarawela ; Matale, Panwila, Teldeniya ; Nuwara Eliya, Hatton ; Jaffna, Kayts, Mallakam ; Point Pedro, Chavakachcheri ; Batticaloa, Kalmunai ; Mullaittivu, Vavuniya
Village Tribunal	220	59	—
Village Committee	63	—	—

POLICE.

The Regular Police Force of the Island was established and is regulated by the Police Ordinance, No. 16 of 1865, as amended by the subsequent Ordinances.

Before the Police Force was constituted the duties of the Police were attended to by the Headmen. Regular Police have been gradually introduced into most parts of the Island since 1865. With changing conditions in the rural areas due to rapid and improved means of communication, the opening up of colonization schemes and other land schemes, the influx of strangers and, more especially, of the travelling criminal, the establishment of additional Police Stations to assist the Headmen is becoming more and more imperative. At present there are 168 Police Stations and 24 Police Offices.

The sanctioned strength of the Force is 1 Inspector-General, 2 Deputy Inspectors-General, 41 Superintendents, Assistant Superintendents, and Probationers, 237 Chief Inspectors, Inspectors, and Sub-Inspectors (including the Port Police), 2 Sergeant Majors, 381 Sergeants, and 2,616 Constables.

General.—The following is a statement of crime for the last 5 years :—

	1937.	1936.	1935.	1934.	1933.
Total	14,673	14,287	12,957	12,730	12,805
True	9,639	9,400	8,505	8,405	8,530
Convictions	3,169	3,381	3,028	3,163	3,139
	33%	36%	36%	38%	37%
Pending	1,751	1,896	1,701	1,397	1,466

The following is an analysis of the main heads of crime for the last 5 years.

	1937.	1936.	1935.	1934.	1933.
Homicide	326	379	330	352	324
Attempted Homicide	200	228	175	141	146
Grievous hurt	1,618	1,869	1,486	1,612	1,531
Hurt with dangerous weapons	2,480	2,575	2,167	2,233	2,271
Burglary	3,136	3,137	2,910	2,777	3,091
Cattle theft	1,537	1,173	1,328	968	1,157
Theft	2,525	2,305	2,304	2,246	2,171
Bicycle theft	611	470	354	311	317
Other offences	2,240	2,151	1,903	2,090	1,797

Note.—The figures for the 1937 report have been taken from the Police Grave Crime Abstracts which show the actual number of cases committed during the year. In previous years the figures quoted were taken from the A. B. C. Returns furnished by the Magistrates and represented the disposal of true cases only.

6——J. N. 77053 (8/38)

The item "Theft of Cattle and Praedial Produce" in Diagram No. 10 represents "Cattle Theft" only from 1933 to 1937.

In 1937 thefts of bicycles under Rs. 20 in value and unnatural offence were classified by the Police as crime for the first time.

There has been a considerable decrease in crimes of violence, a marked increase in cattle stealing while the figures for burglary are approximately the same as those of the previous year.

Control of Motor Traffic.—There were 30,827 prosecutions under the Motor Ordinance. 739 were for reckless or negligent driving, 21 for driving a car when intoxicated, and 100 for failing to report an accident in which injury to a person was caused. In addition 56 cases for causing death and 71 for causing injury by a rash and negligent act were instituted under the Penal Code.

Eighty-four licences were cancelled or suspended.

3,483 accidents caused by motor vehicles were reported to the Police and 154 persons (of whom 101 were pedestrians) were killed as a result of injuries received in motor accidents.

In the majority of accident cases there is no compensation for the injured party where no offence can be proved or where the offender is acquitted in court. Compulsory third party insurance is essential, and it is of interest that a model Motor Ordinance is under preparation by the Colonial Office in which regulations for third party insurance are embodied in a form that can be standardized throughout the Colonies.

21,721 prosecutions were entered against omnibuses, a type of vehicle which was responsible for 723 of the accidents reported.

The following are some relevant figures :—

Year.	Motor Vehicles on the Road.	Number of Prosecutions for exceeding Speed Limit.	Number of Prosecutions for Reckless or Careless Driving.	Fatal Accidents.
1932	23,203	688	400	87
1933	23,359	394	343	92
1934	25,010	402	449	122
1935	27,052	597	619	129
1936	26,571	619	671	147
1937	30,223	649	739	154

The control of motor omnibus traffic is still one of the major traffic problems with which Police have to deal. There was again intense rivalry in many parts of the country between omnibus companies plying on the same routes, and, while much was done by arbitration and by cancelling or suspending the licences of omnibuses whose owners were the source of disorderliness and criminal acts on the public roads, it is clear that it is not possible for omnibus traffic to continue to ply upon the public roads without frequent clashes between rival omnibus companies unless a Central Control Board is established for the purpose of regulating routes, the number of omnibuses to be allowed to ply on any one route, fares and the times of departure and arrival.

Control of Bullock Cart and other Traffic.—Fourteen persons were killed in street accidents in which vehicles other than motor vehicles were involved and 9,725 prosecutions were entered against drivers and owners of such vehicles. Action has been taken in Colombo to compel cyclists

THE SUMMER HOUSE AT HAKGALA.

to keep to the side of the road, while in most towns pedestrians are from time to time reminded to use the pavements and where there are no pavements to keep to the right.

Cinematograph Films.—Films imported into Ceylon have previously been examined by the British Board of Film Censors in London and by the Censors in India. Lists of Films passed, excised or prohibited in England or in India are received monthly and private views, prior to public examination, are held where necessary by the Mayor of Colombo, who is the Censor for Colombo City, assisted by representative bodies.

The same system applies to outstations, copies of the lists being forwarded to local censors. The system works well, and the Managers of the various theatres readily co-operate with the authorities.

Maintaining order in the Streets.—During 1937 good order was maintained in the streets of Colombo. Special attention was paid to patrolling. The sale of opium and ganja was less active; but the employment of boys to hawk these drugs in the streets appears to be on the increase. Progress is being made with the establishing of a Home or Training School for Youthful Offenders which should help to serve as an efficient corrective and check the employment of boys in the illicit drug trade.

The molestation of passengers visiting the Island by touts is still a serious problem: legislation is under consideration that will more effectively check the nuisance.

Strikes.—There were several minor strikes in Colombo and in the Colombo District of the Western Province, in all of which the Police were called upon to maintain order. None of these strikes was of long duration and all were settled without any serious breach of the peace occurring.

Criminal Investigation Department.

The Central Bureau established in 1930 to deal with forged notes and counterfeit coins, dealt with 87 cases of forging, uttering or possessing forged currency notes as compared with 120 cases in 1936 and 33 in 1935. There were 73 cases of counterfeiting, uttering or possessing counterfeit coins.

Immigrants.—101,910 persons entered and 111,350 left Ceylon *viâ* Talaimannar, compared with 87,171 arrivals and 105,391 departures by this route in 1936. Eight persons were declared destitute at Talaimannar and prevented from landing.

60,016 persons arrived from Tuticorin and 43,625 left Ceylon by this route, compared with 51,294 arrivals and 42,614 departures in 1936.

PRISONS.

Number of Admissions.—The total number of admissions on conviction during 1937 was 15,000 (14,601 males and 399 females). Of this number, 1,392 were admitted on conviction from the Supreme and District Courts. 206 were convicted of murder and culpable homicide not amounting to murder.

Number sentenced to death and executed.—The number of male persons sentenced to death during the year was 63, of whom 31 were executed and 1 was pardoned and released by order of the Governor. Of these

31, 1 was executed in January, 1938. One female person was sentenced to death during the year, but the sentence was commuted to one of imprisonment.

Daily average population.—The daily average population (both convicted and unconvicted prisoners) of the prisons was 3,931·03 (3,862·67 males and 68·36 females).

Reconvicted prisoners.—The number of reconvicted prisoners admitted was 5,136 (34·24 per cent. of the total admissions). Of this number, 1,773 were reconvicted criminals within the meaning of Ordinance No. 2 of 1926 as amended by Ordinance No. 27 of 1928.

Preventive detention.—The number of prisoners sentenced to preventive detention by courts during the year was 1. The daily average of prisoners undergoing preventive detention was 43·76.

Number in default of payment of fines.—The number of admissions for non-payment of fines was 10,105. In 8,185 of these cases the offences were either statutory or made punishable by Village Tribunal rules.

No statistics are available as to the number of cases in which time was given for the payment of fines or for payment by instalments.

Young Offenders.

(*a*) *Young first offenders.*—The number of admissions of young first offenders of the age of 16-21 was 1,032, of which number 654 were for non-payment of fines and 465 for statutory or Village Tribunal offences.

(*b*) *Young reconvicted offenders.*—The number of admissions of young reconvicted offenders was 448, of which number 285 were for non-payment of fines and 198 for statutory or Village Tribunal offences.

Religion and race.—The following table gives the nationality and religion of all convicted persons received into the prisons during the year 1937 :—

Table showing Nationality and Religion of all Convicted Persons received into Prisons during the Year 1937.

Nationality.									Religion.						
Resident Europeans.	Non-Resident Europeans.	Burghers.	Sinhalese.	Tamils.	Moors.	Malays.	Others.	Total.	Protestants.	Roman Catholics.	Buddhists.	Hindus.	Muslims.	Others.	Total.
—	—	37	11,006	2,339	1,278	98	242	15,000	57	1,163	10,285	2,111	1,303	81	15,000

Prison Punishments.—The number of punishments imposed during the year on prisoners for offences against prison discipline was 2,484 as against 2,157 in 1936, the number of individuals punished being 1,856. In most cases the offences were of a trivial nature. Nine prisoners were sentenced to undergo corporal punishment during the year 1937, as against 3 in the previous year. There were two escapes during the year, but both of them were recaptured.

THE HORTON PLAINS TROUT STREAM (7,000 ft.).

The Prisons Ordinance, No. 16 of 1877, placed all the prisons in Ceylon under the control of the Inspector-General of Prisons. Ceylon therefore enjoys the advantages of a unified prison system which renders possible classification by institutions in addition to subclassification in institutions.

The principle upon which this classification proceeds is the separation of the different types of offenders—especially the separation of the young offender from the adult, the first offender from the "habitual", the convicted from the unconvicted, males from females, &c. To each type of offender appropriate methods of treatment and training are applied.

The different prisons are utilized as follows :—

Welikada (*Colombo*), for the detention and training of the following classes :—

(i.) Adult first offenders with sentences of two years and over ;
(ii.) All "Star" class, *i.e.*, European or educated Ceylonese first offenders ;
(iii.) Young prisoners of the age of 16–21 (both inclusive) irrespective of length of sentence ;
(iv.) Female prisoners other than those sentenced to short terms in outstations who are detained in the local prisons.

Hulftsdorp (*Colombo*), for all local convictions from the courts of the Colombo District who are sentenced to short terms of one month and under.

Mahara is set apart for adult reconvicted prisoners with sentences of over two years in one section, and for all adult first offenders with short sentences ranging from over one month up to and including six months in a separate section. Selected prisoners from among the reconvicted prisoners are specially classified in the Special Class B in which they serve a probationary period of six months prior to transfer to Kandy prison for industrial and other forms of special training in the Special Class A. Prisoners are also transferred to Mahara prison occasionally from other prisons for misconduct.

Bogambara (Kandy) is set apart for the following :—

(i.) First offenders convicted by local courts and sentenced to one month's imprisonment or less ;
(ii.) All first offenders with sentences of over one year and up to but not including two years ;
(iii.) Special class "A", *i.e.*, selected reconvicted prisoners from Mahara with sentences of over two years ;
(iv.) Prisoners undergoing sentences of preventive detention.

Jaffna is set apart for the following :—

(i.) Persons sentenced by the local courts to imprisonment for one month or under ;
(ii.) Short term reconvicted offenders with sentences of over one month and up to and including two years ;
(iii.) Prisoners transferred from other prisons for misconduct under monthly report.

The special gang is also located at Jaffna. The special gang is intended for prisoners guilty of continued bad or violent conduct. These prisoners are kept strictly apart from the other inmates.

Anuradhapura is set apart for the following :—

(i.) Locally convicted short term prisoners who are sentenced to one month and under.

(ii.) First offenders with sentences of over six months and up to one year.

Negombo, Galle, Badulla, and Batticaloa.—The prisons at Negombo, Galle, Badulla, and Batticaloa are used for the detention of short term locally convicted prisoners, and prisoners on remand.

Remand prisons.—There are separate prisons for remand prisoners and persons awaiting trial, civil debtors, &c., only in Colombo (adjoining Welikada Prison) and in Kandy. At other stations the ordinary prisons for convicted prisoners are also used for the location of these types in separate blocks or wards.

Methods of Treatment of Different Types of Offenders.

A. *Young first offenders.*—All young offenders of the age of 16–21 inclusive with sentences of over one month are detained at Welikada in separate wards. Rover Scout principles are utilized for their training and regular camps are held. The Welikada Prison Rover Troop is the first officially recognized prison troop in the world. Educational classes, industrial and vocational training, First Aid instruction, Boxing, Gymnastics, Drill, and games form a part of the regular curriculum, in addition to the various Scout activities.

B. *Long term first offenders.*—The progressive stage system—a feature of the English prison system—has been adapted to suit local conditions and is largely used in connection with the training of these offenders. According to this system prisoners fall into different classes. Every prisoner sentenced to imprisonment immediately enters and remains in what is called the penal stage for one month. He then enters and remains in Class IV., when he becomes eligible to earn remission, for eleven months. Conditional upon good conduct and industry he is promoted to Class III. where he remains for one year and then on the same conditions to Class II. At the end of one year if his conduct is satisfactory he is promoted to Class I. Promotion from class to class carries with it a graduated scale of privileges and on entry into Class II., gratuity and good conduct badges can be earned. Prisoners who show special skill and aptitude in the various trades are appointed Instructors (Grades I. and II.) who are accorded enhanced rates of pay and privileges.

Another feature in the training of these long term first offenders is the placing of responsibility on individual prisoners. Long term first offenders in Class I. of exemplary conduct are selected for appointment as Disciplinary Prison Orderlies. Their duties consist in assisting the regular prison officers ; they are left in charge of small parties inside the prison and act as escorts within prison walls, &c.

A further experiment is the formation of Leagues on the lines of the Mutual Welfare Leagues in the New York prisons. There are two such Leagues—one for the Disciplinary Prison Orderlies and the other for prisoners who have earned good conduct badges. Inmate responsibility, managing their own affairs within limits and training in the ideals of good citizenship are the salient features of these Leagues.

All long term first offenders are employed and trained in one or more of the many trades and handicrafts taught in Welikada Prison. On reaching certain grades of the stage classification they earn money part of which may be spent in the purchase of books and extras to the diets or sent to their families and part of which is accumulated and paid on discharge.

C. *Reconvicted prisoners.*—For the training of selected types of reconvicted prisoners there are two classes in Mahara and Bogambara Prisons. Specially selected reconvicted prisoners with sentences of two years and over constitute Class B. These prisoners while at work are kept separate from the others. Evening classes are held for them and they are supplied with books from the prison library. They are also given the privilege of playing games, &c. After a probationary training for six months in this class all who prove satisfactory are transferred to Kandy where they form Special Class " A ". Prisoners in Special Class " A " are treated like first offenders in all matters relating to pay, industrial training, privileges, &c.

Labour.—All labour of a purely mechanical and unprofitable nature has been abolished. Prisoners are mostly employed on public works, the domestic services of the prisons, and on industrial undertakings. At Mahara the principal work is the quarrying of stone and stone breaking. In Jaffna the work consists of the reclamation of the lagoon. Welikada and Bogambara Prisons are highly industrialized. The following industries are carried on :—carpentry, tailoring, brush-making, rattan, fibre, shoemaking, blacksmiths' work, tin smiths' work, spinning and weaving, soap making, and printing. At Welikada there is in addition an up to date steam laundry which washes the linen of all the hospitals, railway, asylum, &c. The output value of prison industrial undertakings for the year 1936–37 was Rs. 248,785·44, as against Rs. 225,061·78 during the previous year.

Education.—For young offenders, that is, those of 22 and under, vernacular education is compulsory. At Welikada, Bogambara and Mahara Prisons evening classes, conducted by volunteer social workers, have been organized for the benefit of both young offenders and adult offenders. These classes are held in English and in the vernacular. Commercial classes in typewriting, shorthand, &c., are also held in Welikada prison for the benefit of Star Class prisoners.

Recreation.—Well conducted prisoners, particularly young offenders, Star Class prisoners, first offenders, preventive detention prisoners and prisoners in the Special Classes A & B who have reached an advanced stage in their training are allowed to take part in games both indoor and outdoor. Boxing, gymnastics, and volley ball are popular games.

Religious instruction.—There are no prison Chaplains in Ceylon but representatives of all creeds and denominations are allowed to visit the prisons, hold services, and give religious instruction. Services are held every Sunday and all prisoners are encouraged to attend the services of their particular denomination.

Preventive detention.—There is no separate prison for prisoners undergoing preventive detention. These prisoners are located in a portion of Bogambara prison specially set apart for them. But the conditions of

an ordinary rigorous imprisonment prison afford little scope for the special course of training contemplated by the system of preventive detention, and the reorganization of the system is under consideration.

After care.—An unofficial organization known as the Ceylon Discharged Prisoners' Aid Association, with sub-committees in Colomblo and Kandy works in conjunction with the prison authorities and is the agency through which aid is given to discharged prisoners. Owing to lack of funds and public support the scope and activities of the Association are very restricted.

Remission and Review of Sentences.—All criminal prisoners sentenced to rigorous or simple imprisonment (except under Chapter 7 of the Criminal Procedure Code) become eligible to earn a remission of sentence, which is conditional on good conduct and industry and which is based on the mark system, on completion of the first month (30 days) of their sentences. The maximum remission of sentence that a prisoner can earn is in the case of a male prisoner, one-fourth of the period of imprisonment during which he is allowed to earn marks and, in the case of a female prisoner, one-third of such period. Under rule 40 of the statutory rules also the case of every prisoner is reviewed by the Governor on completion of 4, 8, 12, 15, and 20 years respectively of the term of imprisonment and a number of premature releases are made every year.

Health of prisoners.—Whole-time resident Medical Officers are provided for the three Colombo prisons and for Mahara prison. The Medical Officers attached to all the other prisons are not whole-time officers but have other outside duties to perform as well.

At Welikada there is an up to date prison hospital intended to serve the three Colombo prisons, with accommodation for 120 beds for general cases and 60 beds for infectious diseases.

In the female section of the Welikada prison there is a ward with 7 beds for general cases.

At Bogambara there is a hospital consisting of 5 wards.

In all other prisons a separate ward is utilized as a hospital.

All cases which need operative treatment or special nursing are transferred to the ordinary civil hospitals for treatment.

The total number of deaths of prisoners (both convicted and unconvicted) admitted to prison was 59 in 1937, as against 49 in 1933. These deaths include prisoners who died in the prisons and prison hospitals as well as in civil hospitals and other medical institutions, but are exclusive of judicial executions.

CHAPTER XIV.

Legislation.

THE following are the important Ordinances passed in the year 1937 :—

The Naval Volunteer Ordinance, No. 1 of 1937.—This Ordinance repeals the Ceylon Royal Naval Volunteer Reserve Ordinance, No 15 of 1934, and provides for the establishment of a Naval Volunteer Force for the defence of the Island of Ceylon within its territorial waters. Every member of the Force must be a British subject domiciled in Ceylon or resident in Ceylon for a period of not less than twelve months in the

Copyright Photograph *Lionel Wendt.*

THE STATE COUNCIL IN SESSION.

andronicus

eighteen months next preceding the date of enrolment in the Force. The organization, administration and training of the Force are to be governed by regulations which the Governor is empowered to make.

The Fauna and Flora Protection Ordinance, No. 2 of 1937.—This Ordinance gives effect to the recommendations made by the Special Committee appointed in September, 1933, to report on the measures necessary to be taken for the protection of the indigenous fauna and flora of Ceylon.

Part I. of the Ordinance deals with the constitution and administration of National Reserves and Sanctuaries. National Reserves are to be of three kinds: Strict Natural Reserves, National Parks, and Intermediate Zones. All National Reserves and Sanctuaries will be under the general control of a Warden who will be assisted by a Deputy Warden and several official and honorary District Wardens. The Governor is empowered to appoint an Advisory Commitee of twelve persons with the Warden as Chairman, for the purpose of making recommendations to the Executive Committee and of advising generally on all matters relating to the fauna and flora of the Island.

Part II. of the Ordinance makes provisions for the protection, in areas outside a National Reserve or a Sanctuary, of deer, fowl of certain defined species, wild tuskers, wild elephants and wild buffaloes.

Part III. makes provision for the protection of birds, beasts and reptiles in areas outside a National Reserve or a Sanctuary and has to be read with Schedules I. and II.

Part IV. makes provision for the protection of the flora of the Island and has to be read with Schedules III. and IV.

Some further important provisions of the Ordinance appear in Part V. under the heading "Miscellaneous Provisions", while Part VI. contains further miscellaneous provisions of general application.

The British Courts Probates (Re-sealing) Ordinance, No. 3 of 1937.—This Ordinance repeals the British and Colonial Probate Ordinance, No. 7 of 1921, and the British and Colonial Probate Amendment Ordinance, No. 32 of 1935.

Under the old Ordinance "competent court" was defined as a court on which the Supreme Court had conferred sole testamentary jurisdiction on an application made under section 70 of the Courts Ordinance, 1889. It was found that the necessity for this preliminary application to the Supreme Court could well be dispensed with in order to save unnecessary delay and expense. Section 2 of the Ordinance accordingly provides that application may be made direct to a court of testamentary jurisdiction in Ceylon. Provision has also been made to the effect that the District Court of Colombo may exercise jurisdiction in any case, as, in practice, most applications for re-sealing will be made to that Court.

The Reciprocal Enforcement of Judgments Ordinance, No. 4 of 1937.—This Ordinance makes provision for the enforcement in Ceylon of judgments given in foreign countries which accord reciprocal treatment to judgments of Ceylon courts. There is already provision in law for the enforcement in Ceylon of judgments given by the Courts in the United Kingdom. As it is desirable that the law relating to the enforcement of British judgments should be the same as that relating to the enforcement of foreign judgments, section 8 of the Ordinance provides for the

extension of the new law to judgments given by British Courts, and prescribes the circumstances in which Ordinance No. 41 of 1921 will cease to be operative in Ceylon.

The other sections in the Ordinance are modelled on the revelant provisions of the Foreign Judgments (Reciprocal Enforcement) Act, 1933. The District Court of Colombo will, however, continue as under the existing law, to be the only court vested with jurisdiction for the purpose of registering and enforcing British and foreign judgments.

The Registered Stock and Securities Ordinance, No. 7 of 1937.—This Ordinance provides the ancilliary procedure and machinery whereby registered stock, promissory notes and bearer bonds may be issued as securities to members of the public who decide to invest their money in local loans which carry a Government guarantee.

Though the General Loan and Inscribed Stock Ordinance, No. 5 of 1921, enables Ceylon loans to be raised in England by the issue of inscribed stock, and though the Ceylon Inscribed Rupee Stock Ordinance, 1892, authorizes the issue of inscribed rupee stock in Ceylon, it was considered that the securities which will be available under this Ordinance will prove move convenient and attractive to local investors.

The Revised Edition of Legislative Enactments Ordinance, No. 19 of 1937.—This Ordinance authorizes the preparation and publication of a revised edition of the legislative enactments of Ceylon. The last revised edition of the legislative enactments was published in 1924 and a new and revised edition is overdue.

The chronological arrangement has been followed in the revised editions heretofore. It has now been decided, after consultation with the Bench and the Bar, to adopt the Title and Chapter classification, the Chapters being grouped according to subjects as in the recent edition of the laws of the Straits Settlements.

The Food Control Ordinance, No. 22 of 1937.—This Ordinance makes provision for the regulation and control of the distribution, transport and supply of food in Ceylon.

In order to secure an even distribution of food throughout the Island, power is given to the Minister for Labour, Industry and Commerce by order published in the *Gazette* to prohibit or regulate the transport or removal of food or cattle to or from any specified place or area. Every order of the Minister will be in force for a period of seven days in the first instance, and if it is confirmed by the Board of Ministers and approved by the State Council will continue in force for a period of two months.

Nothing in the Ordinance is to apply to any food or cattle kept, transported or removed by, or on behalf of, or for the use of His Majesty's Forces or the Civil Authorities.

Factory and Labour Legislation.

The Mines (Prohibition of Female Labour Underground) Ordinance, No. 13 of 1937, prohibits the employment of females on underground work in mines of any kind. This Ordinance is intended to give effect in Ceylon to a draft Convention adopted by the General Conference of the International Labour Organization on June 21, 1935.

CRAFTSMAN AT WORK, KANDY.

SUBSIDIARY LEGISLATION.

The subsidiary legislation issued during the year was concerned mainly with the amendment of existing subsidiary legislation or the introduction of such legislation into new districts or areas.

CHAPTER XV.

Banking, Currency, Weights and Measures.

BANKS.

THE following is a list of banks which have branches in Ceylon :—

Name of Bank	Imperial Bank of India
Address of Head Office ..	Madras
Branch in Ceylon ..	Prince street, Fort, Colombo
Agents in Ceylon ..	—
London Office	25, Old Broad street, London, E. C. 2

Name of Bank	National Bank of India, Ltd.
Address of Head Office ..	26, Bishopsgate, London, E.C. 2
Branches in Ceylon ..	York street, Fort, Colombo ; Ward street, Kandy ; and Nuwera Eliya
Agents in Ceylon ..	Clark, Spence & Co., Galle
Bankers in the United Kingdom	The Bank of England ; The National Provincial Bank, Ltd. ; The National Bank of Scotland, Ltd.

Name of Bank	The Chartered Bank of India, Australia, and China
Address of Head Office ..	38, Bishopsgate, London, E.C. 2
Branch in Ceylon ..	Queen street and Baillie street, Fort, Colombo
Agents in Ceylon ..	Mercantile Bank of India Ltd., Galle
Bankers in the United Kingdom	The Bank of England ; Midland Bank, Ltd. ; Westminster Bank Ltd. ; National Provincial, Bank, Ltd. ; The National Bank of Scotland Ltd. ; Lloyds Bank, Ltd.

Name of Bank	Hong Kong and Shanghai Banking Corporation
Address of Head Office ..	1, Queen's road, Hong Kong
Branch in Ceylon ..	24, Prince street, Fort, Colombo
Agents in Ceylon ..	E. Coates & Co. (Galle), Ltd., Galle
Bankers in the United Kingdom	Westminster Bank, Ltd.

Name of Bank	The Mercantile Bank of India, Ltd.
Address of Head Office ..	15, Gracechurch street, London, E.C. 3
Branches in Ceylon ..	16, Queen street, Fort, Colombo ; 97, Queen's Hotel building, Kandy ; and Galle
Agents in Ceylon ..	—
Bankers in the United Kingdom	The Bank of England ; Midland Bank, Ltd.

Name of Bank	The Eastern Bank Ltd.
Address of Head Office ..	2 and 3, Crosby square, Bishopsgate, London, E.C.3

Branch in Ceylon ..	Main street, Fort, Colombo
Agents in Ceylon ..	—
Bankers in the United Kingdom	The Bank of England ; Westminster Bank, Ltd.; The National Provincial Bank, Ltd. ; The Bank of Scotland ; Barclay's Bank, Ltd. ; Martin's Bank, Ltd.

Name of Bank	The P. & O. Banking Corporation, Ltd. (with which is affiliated The Allahabad Bank, Ltd.)
Address of Head Office ..	117-122, Leadenhall street, London, E.C. 3
Branch in Ceylon ..	Victoria Arcade buildings, York street, Fort, Colombo
Agents in Ceylon ..	E. Coates &. Co. (Galle), Ltd., Galle
Bankers in the United Kingdom	The Bank of England ; Lloyds Bank, Ltd. ; Westminster Bank, Ltd. ; The National Provincial Bank, Ltd. ; Royal Bank of Scotland

Savings Banks.

There are two Savings Banks, viz., the Ceylon Savings Bank and the Post Office Savings Bank.

The Ceylon Savings Bank is a Government institution established in 1832. Accounts may be opened with a minimum deposit of 50 cents and not more than Rs. 2,000 can be deposited in one year irrespective of withdrawals. The maximum sum which a depositor may have to his or her credit is Rs. 6,000. Charitable institutions or societies may deposit Rs. 3,000 per annum up to a maximum of Rs. 9,000. The Bank allows interest at the rate of 3 per cent.

The Post Office Savings Bank is managed by the Post and Telegraph, Department. Deposits and withdrawals can be made at any of the Post Offices in the Island. The first deposit is 50 cents and the minimum amount that can be deposited thereafter is 25 cents, and the maximum per annum is Rs. 750 irrespective of withdrawals. The total amount which a depositor may have to his or her credit is Rs. 3,000. The rate of interest allowed is 2·4 per cent.—2 cents per month for each complete sum of Rs. 10.

Co-operative Societies.

There were on April 30, 1937, 1,117 registered Co-operative Societies in Ceylon of which 4 were Co-operative Central Banks, 930 Village Credit Societies of Unlimited Liability, 41 Societies of Limited Liability, 70 Thrift Societies, 21 Supply Societies, 32 Supervising Unions, 1 Co-operative Land Mortgage Bank, 1 Sale Society, 1 Co-operative Motor Boat Society, 1 Milk Supply Society, 1 Sports Society, 1 Ceylon Fruit & Minor Produce Society, 1 Desiccated Coconut Millers' Society, 1 Paddy Hullers' Society, 1 Pottery Society, 1 Poultry Society, 7 Labour Societies, 1 School Supply Society, and 1 Union Hospital. These Societies had 46,044 members.

Statistics are compiled only at the end of the Co-operative Working year on April 30. Since then the following societies have been registered :

Unlimited credit	56
Thrift and Savings Societies	15
Labour Societies	6
Sales Society	1
Northern Division Co-operative Union	1
	79

Working Capital on April 30, was Rs. 4,035,726.

Loans are still made from the Local Loans and Development Fund to societies in those parts of the Island which are not yet covered by the Central Banks.

The percentage of overdues was 20 per cent. for the Western Division, 11 per cent. for the Central Division, 13·4 per cent. for the Northern Division.

The Staff of the Department, exclusive of the clerical staff, consists of 1 Registrar, 1 Deputy Registrar, 4 Assistant Registrars, 34 Inspectors,

ishing company inc

10 Sub-Inspectors, and 1 Supervisor, Labour Societies. During the year Rs. 4,934·67 were contributed by societies towards the cost of maintaining the staff employed for their Supervision and Audit.

CURRENCY, &c.

The monetary unit in Ceylon is the Indian silver rupee, which is divided into 100 cents. The following fractions of the rupee are coined: — (1) Silver, 50-cent piece; 25-cent piece; and 10-cent piece; (2) nickel 5-cent piece; (3) copper, 1-cent piece and ½-cent piece.

The chief medium of exchange in Ceylon is the currency notes issued by the Government of Ceylon. They are of the following values :— Rs. 1,000, Rs. 500, Rs. 100, Rs. 50, Rs. 10, Rs. 5, Rs. 2, and Re. 1. The present value of the rupee is about 1*s.* 6*d.*

WEIGHTS AND MEASURES.

The standard weights and measures are the English units. In conjunction with these many local weights and measures are used.

CHAPTER XVI.

Public Finance and Taxation.

Revenue and Expenditure.

The revenue of the Island in the last five completed financial years was :—

		Rs. c.			Rs. c.
1932–33	..	106,090,728 48*	1935–36	..	102,770,506 64
1933–34	..	104,100,361 7†	1936–37	..	119,196,899 52‡
1934–35	..	98,993,551 55			

The following is a statement of the expenditure in the same financial years :—

			Expenditure chargeable to General Revenue including accumulated Surplus Balances. Rs. c.		Expenditure chargeable to Revenue pending raising of Loan Funds. Rs. c.
1932–33	..	..	92,698 229 11	..	—
1933–34	..	..	93,444,581 34	..	—
1934–35	..	..	107,286,124 66§	..	—
1935–36	..	..	109,740,474 82‖	..	1,177,061 81
1936–37	..	..	108,778,780 43¶	..	—

Public Debt.

On September 30, 1937, the sterling debt of the Island stood at £12,243,775 and the rupee debt at Rs. 30,775,000 towards redemption of which were held securities and moneys amounting to £4,450,526 and Rs. 3,283,853.

---

* Includes Rs. 2,120,437·21 and Rs. 1,564,511·69 appropriated to general revenue from the Railway Renewals Fund and the Colombo Electricity Supply Depreciation Fund respectively.

† Includes Rs. 4,339,061·10 being surplus in the Sinking Fund of the 4 per cent. inscribed Stock, 1934.

‡ Includes Rs. 13,847,174·87 recovered from Loan, being expenditure met from Surplus Balances in previous years pending raising of Loan.

§ Includes Rs. 2,190,172·45 being expenditure charged to Special Reserve.

‖ Includes Rs. 1,035,442·45, being expenditure charged to Special Reserve.

¶ Includes Rs. 242,464·51, being expenditure charged to Special Reserve.

DIAGRAM No. 11

TOTAL REVENUE AND EXPENDITURE OF THE ISLAND

FOR EACH FINANCIAL YEAR (OCTOBER 1 TO SEPTEMBER 30) SINCE 1921-22

DIAGRAM No. 11

TOTAL REVENUE AND EXPENDITURE OF THE ISLAND

FOR EACH FINANCIAL YEAR (OCTOBER 1 TO SEPTEMBER 30) SINCE 1921-22

Setting off the securities against the debts and effecting conversion at 1*s.* 6*d.* to the rupee the net total Public Debt of the Island amounts to Rs. 131,401,131 which is slightly greater than the revenue for the year ended September 30, 1937.

The following summary gives particulars of the public debt together with the value of the sinking fund in respect of each loan forming the debt :—

Sterling Loans. £.			Sinking Fund. £.
2,850,000	3%	Inscribed. Stock, 1940	3,238,165
800,000	3½%	,, 1959	19,878
1,000,000	4%	,, 1939/59	391,564
4,500,000	3%	,, 1959/64	114,425
1,250,000	5%	,, 1960/70	58,691
1,843,775	4½%	,, 1965	81,891
—		Supplementary Sinking Fund	545,912
12,243,775			4,450,526
@ 1s. 6d. = Re. 1			@ 1s. 6d. = Re. 1
= Rs. 163,250,333			= Rs. 59,340,347

Rupee Loans. Rs.			Sinking Fund. Rs.
3,000,000	4 %	Inscribed Stock 1942/44	3,283,853
27,775,000	3½%	Registered Stock & Promissory Notes, 1957/62 ..	—
30,775,000			3,283,853
Rs. 194,025,333			Rs. 62,624,200

ASSETS AND LIABILITIES.

The assets and liabilities of the Island on September 30, 1937, were as follows :—

The assets consisted of—

	Rs.	c.
(1) Cash in the hands of the Deputy Financial Secretary, in fixed or current deposit in Banks and with the Crown Agents in London	29,845,618	44
(2) Unissued stores, investments in rupee and sterling gilt edged securities, advances to the General Manager of the Railway, other recoverable advances, security deposits in banks, &c., remittances in transit and suspense account	30,705,231	54
	60,550,849	98

The liabilities consisted of—

(1) Widows' and Orphans' Pension Fund	13,069,584	74
(2) Ceylon University Building and Equipment Fund ..	4,887,728	19
(3) Loan Funds	10,603,293	45
(4) General Reserve Fund	10,000,000	0
(5) Special Reserve Fund	1,581,599	29
(6) Court suitors and other depositors in the Treasury and the Kachcheries	8,066,000	57
(7) Other Governments and agencies, loans to local bodies (sinking funds) and unpaid drafts	724,369	77
(8) Department of Government Electrical Undertakings ..	793,758	10
	49,726,334	11
Surplus	10,824,515	87
	60,550,849	98

Taxation and yield thereof—

The main heads of taxation and the yield of each are as follows :—

Customs	54,064,885	92
Salt	2,188,894	84
Country and foreign liquor	7,723,584	58
Licences—Sundries	753,948	45
Tolls	47,265	99
Stamp duties, including composition duty on Bank cheques and share certificates	3,970,573	10
Estate duties	607,819	9
Betting tax	275,519	92
Income tax	9,027,151	51
Tax on heavy oil motor vehicles	192,714	48
	78,852,357	88

Excise and Stamp Duties (summarized).—The amount realized from Excise revenue during the financial year under review was Rs. 7,723,584·58 and that in respect of Stamp Duties Rs. 3,970,573·10. Compared with the revenue of the last financial year, Excise revenue shows an increase of Rs. 623,983·34 and Stamp Duties an increase of Rs. 1,079,074·32.

Revision of Taxes.—During the financial year under review the following changes in taxes were made :—

	Old Rate.		New Rate.	
	Preferential ad valorem. Per Cent.	General ad valorem. Per Cent.	Preferential ad valorem. Per Cent.	General ad valorem Per Cent.
(1) *Import duties*—				
(a) From January 8, 1937, Goods, Wares and Merchandise,—				
Tissue paper, cover paper and marble paper	15	25	5	15
Paper for lining tea chests	15	25	5	15
Iron and steel sheets and circles declared to be imported for the purpose of manufacturing drums for the export of local produce :—				
(i.) Galvanized or coated ..	10	20	—	2
(ii.) Not coated	—	10	—	2
(b) From March 20, 1937—				Rs. c.
Acid, acetic	—	5	—	0 50 per demijohn of 44 lbs.
Acid, formic	—	5	—	0 70 per demijohn of 44 lbs.
Asphalt	—	15	—	0 60 per cwt.
Dry battery cells	—	15	—	1 0 per gross
Fish, jadi	10	20	—	0 75 per cwt.
(c) From May 14, 1937—				
Cinematograph films of an educational character, whether developed negative or positive films (including gramophone records or other forms of sound reproduction complementary to such films or developed negative or positive sound tracks) which are certified by the Director of Education in Ceylon to be films of an educational character on the ground that they fall within one or more of the following classes:— (a) Films designed to supply information with regard to the work and aims of the League of Nations and other international organizations which are generally recognized by the High Contracting Parties to the International Convention of 1933 for Facilitating the International Circulation of Films of an Educational Character ; (b) Films intended for use in education of all grades ; (c) Films intended for vocational training and guidance, including technical films relating to industry and films relating to scientific management ; (d) Films dealing with scientific or technical research or designed to spread scientific knowledge ; (e) Films dealing with health questions, physical training, social welfare or relief	Rs. c. 0.01	Rs. c. 0.02	Per Foot.	Free
(d) From July 28, 1937.				
Dangerous petroleum as defined in section 3 of Ordinance No. 6 of 1887, including any inflammable hydro carbon (including any mixture of hydro carbon and any liquid containing hydro carbon) which is capable of being used for providing reasonably efficient motive power for a motor car, per gallon	—	0·65	—	0·75
(2) *Export Cesses* :—	Old Rate.		New Rate	
(Payable to quasi-Government bodies)—				
Rubber Control—per 100 lbs. (from December 10, 1936)	—	0·25	—	0·30
Tea Propaganda per 100 lbs. (from December 17, 1936)	—	0·75	—	1 0

COPRA MANUFACTURE.

Income Tax.—The unit rate of Income Tax was increased from 5 per cent. to 6 per cent. as from the year of assessment commencing on April 1, 1937.

Re-imposition of Estate Duty.—An ordinance re-imposing estate duty as from April 1, 1937, was passed in the State Council in August, 1937, but was reserved for the consideration of the Secretary of State for the Colonies by His Excellency the Governor.

This Ordinance was assented to by the Secretary of State, and became law on January 7, 1938, as Ordinance No. 1 of 1938.

A system of tree tax on toddy manufactured from palmyra and coconut trees introduced from January, 1935, in Valigamam North was extended throughout the Jaffna Revenue District with effect from January, 1937. The rates of taxes are as follows :—

Local Areas. (1)	A Male Palmyra. (2) Rs. c.	A Female Palmyra. (3) Rs. c.	A Coconut Tree. (4) Rs. c.
Islands of Delft and Eluvaitivu	0 50	1 50	1 50
Island of Nainativu and Punaryn Division	1 50	5 0	5 0
In every other local area of the district	2 50	10 0	10 0

CURRENCY.

On September 30, 1937, the value of the currency notes in circulation amounted to Rs. 48,388,984. The Commissioners of Currency on this date held silver rupees to the extent of Rs. 14,212,053 and British, Indian, and Colonial securities amounting to Rs. 40,611,990 (cost price) or Rs. 45,195,266 (market price).

The value of the reserve on September 30, 1937, was thus in excess of the value of the notes in circulation by Rs. 6,435,059 taking the investments at cost price.

During the year silver rupees to the extent of Rs. 53,990 were received from the public and the banks in exchange for currency notes.

Subsidiary coin of various denominations amounting in all to Rs. 12,316,541 was in circulation in the Island on September 30, 1937.

EXCHANGE.

The rates of exchange on London on December 31, 1937, were as follows :—

Selling demand	1*s.* 6 ½*d.* to the rupee
Selling telegraphic transfer	1*s.* 6 3/32*d.* to the rupee
Buying demand	1*s.* 6 3/16*d.* to the rupee

ESTATE DUTIES.

Estates of deceased persons over the value of Rs. 5,000 were chargeable to Estate Duty, but Ordinance No. 51 of 1935 prescribed that Estate Duty should not be levied on estates of persons dying on or after October 1, 1935. During the financial year, 1936-37 a sum of Rs. 651,487 was collected as Estate Duty, as against Rs. 1,425,741 collected in the previous year.

CHAPTER XVII.

Miscellaneous.

LAND.

THE climate varies considerably in different parts of Ceylon, and this fact has an important bearing on the development of land in the Island. There are two main climatic divisions, namely, the wet zone (comprising the centre and south-west of the Island) and the dry zone (comprising the northern and eastern parts).

The wet zone is the part of the Island, roughly a quarter of it, that receives the rain of the south-west monsoon. The rainfall in this zone is both ample and well distributed, with the result that conditions are favourable for agriculture. Tea, rubber, coconuts, and other economic crops can be grown readily, and under normal conditions profitably. As a result of the international agreement to restrict the production of tea and rubber these products may not now be grown. In addition, village cultivation flourishes. For many years past the wet zone has steadily developed, and the population has increased considerably. At the present time, this zone contains the greater part of the population of the Island, and there is comparatively little land available for development except in remote or inaccessible districts.

In the dry zone, on the other hand, conditions are far less favourable. In the first place, the rainfall, though not really inadequate, is so unevenly distributed that the country suffers badly from drought each year, except where extensive storage tanks have been constructed. In the second place, a large part of the dry zone is extremely malarial.

For these reasons, the greater part of the dry zone is thinly populated and practically undeveloped. Where the land can be irrigated or the rainfall is favourable paddy is grown; and a certain amount of land, chiefly near the coast, has been planted with coconuts. Most of the villagers, however, are mainly dependent on "chena" cultivation, that is to say, the periodical clearing and cultivation of tracts of jungle, which are abandoned after one or two crops of grain or vegetables have been grown on them. Systematic farming is unknown. Attempts are being made to develop this area.

A great obstacle to land development is the fact that land titles are often both complicated and uncertain. This is due to two main causes, the claims of the Crown and the absence of any system of registration of title.

In general, all undeveloped land is presumed by law to be the property of the Crown till the contrary is proved. It is clear, however, that to insist that this presumption shall be strictly applied is likely to lead to hardship in many cases. Legislation has therefore been passed providing machinery for dealing with the claims of private persons to land to which the presumption in favour of the Crown applies. The law on the subject is contained in the Land Settlement Ordinance, 1931, as amended by Ordinance No. 22 of 1932 and Ordinance No. 31 of 1933. A special department—the Land Settlement Department—has been organized for the purpose of systematically dealing with all the undeveloped land in the Island under these Ordinances. This undertaking involves a great deal of work, however, and is not likely to be completed for many years.

The need for a system of registration of titles to land has long been recognized, and in 1933 a Committee was appointed to consider this question. The Committee has submitted a report containing proposals for a system of registration of titles suitable to the conditions prevailing in Ceylon, and steps are now being taken to draft the necessary legislation.

Till recently it was the practice not to advertise any Crown land for sale or lease unless some one had applied for that land. When such an application was received, steps were taken to survey the land, and eventually to dispose of the freehold or leasehold by public auction. This system had many disadvantages. Long delays were almost inevitable ; the original applicant could not be sure of obtaining the land he wanted, at any rate at a reasonable price ; the development of the available land was haphazard rather than systematic ; and there was a tendency for the needs of the villagers to be overlooked.

The present policy is for Government to take the initiative in disposing of Crown land. As a necessary preliminary, the Crown land in each village is " mapped-out ", that is to say, it is allocated to various definite purposes in the following way. In the first place, land is set aside for the needs of the State and of the permanent village population. The next consideration is to reserve land for alienation to villagers who are unable to get land in their own villages and are prepared to move to localities where land is available. If possible, land is then provided for development by Ceylonese of moderate means. Any land remaining is made available for alienation to other persons, irrespective of their means or race. Once a village has been mapped-out, the Revenue Officer in charge of the district can dispose of the Crown land in that village without fear of overlooking the interests of any part of the community. He is therefore able to take the initiative, and periodically offer land for disposal if he thinks there is likely to be a demand for it. Persons who receive land under this system are put in possession with the least possible delay.

A further change is in the tenure of land alienated by the Crown. Hitherto the only tenures have been freehold and leasehold, but a new tenure was introduced by the Land Development Ordinance, No. 19 of 1935, which came into force on October 15, 1935. The principal features of this tenure are as follows :—

(*a*) The owner is obliged to cultivate the land, or utilize in some other way specified in the grant.

(*b*) The owner is required to make a small annual payment to the Crown in perpetuity.

(*c*) The land cannot be subdivided beyond the limit specified in the grant, or held in undivided shares smaller than the fraction specified.

(*d*) The succession to the land is not regulated by the ordinary law of inheritance, but by special rules designed to prevent the land from being subdivided.

(*e*) In certain cases, the owner is forbidden to lease or mortgage the land except to the Crown, and may not otherwise dispose of it without the Revenue Officer's consent.

In rural areas, the general policy now is to alienate Crown land required for agricultural purposes by peasants and Ceylonese of moderate means

under the Land Development Ordinance. In urban areas the mode of alienation is normally by long lease. Outright sales of Crown lands have been reduced to a minimum.

The Ordinance provides adequate machinery for enforcing the conditions of the tenure.

It is the present policy of Government not only to take the initiative in bringing land forward for disposal but also to provide a positive stimulus to landless villagers to leave their homes and either take up land in less congested villages or found new villages in undeveloped districts. Thus, " colonization schemes " have been started in various parts of the Island, and those willing to take part in these schemes have been helped with grants of land and money. Provision is made for affording financial assistance to colonists and peasants who take up land under the new tenure.

The villagers are conservative, and as a rule are very reluctant to leave their homes. On that account, progress with colonization schemes has necessarily been slow, and is likely to remain so for some time to come. Eventually, however, it is hoped that the villagers will become less reluctant to leave their homes, and the congestion caused by the growth of the population will cause an increasing number to migrate each year. In this way it should be possible gradually to reclaim large tracts of the dry zone, which are now almost uninhabited, but which formerly supported a large population.

One of the greatest difficulties that the village cultivators have to contend with is that of disposing of their produce at a remunerative price. On this account, a new department has recently been formed, which is responsible for the development of agricultural marketing. Satisfactory progress has already been made, and it is hoped that, as the organization of this department develops, it will become possible for villagers, even in remote parts of the Island, to dispose readily of their surplus produce.

PRODUCTION FORESTS.

A large portion of the Island is still, in spite of agricultural development, &c., covered with forest of one kind or another. Most of the forests are situated in the more remote, inaccessible or sparsely populated parts of the country. Consequently the largest tracts are to be found in the Dry Zone—Northern, North-Central, Eastern and parts of the North-Western and Uva Provinces.

All the Crown land bearing forest is divided into two main categories, viz., that in charge of the Forest Department and that in charge of the Revenue Officers.

The forest land administered by the Forest Department represents practically all the forests which the Government intends to keep permanently as forest bearing land, while most of the land in the care of the Revenue Officers is available for agricultural and other developments.

The Forest Reserves and Proposed Reserves, which are the forests administered by the Forest Department, may be divided into several groups viz., forests intended primarily for the production of timber and fuel, those intended for purely protective, climatic or scenic purposes and those intended for the protection of wild animals, birds and plants.

Totals	.. 1,120,823*	36,333*	257,982*
	1,402,217	56,889	242,699

Grand Total .. 3,116,943 acres.

The forests of Ceylon vary much in appearance and composition according to the particular Climatic Zone in which they are found. These Climatic Zones are usually referred to as the " Dry Zone ", " Wet Zone ". " Intermediate Zone ", and " Mountain Zone ".

The Dry Zone forests belong to the " Tropical Dry Evergreen " type. The principal economic timber trees found in this type are Satinwood (Chloroxylon swietenia), Ebony (Diospyros ebenum), Palu (Mimusops hexandra), Ranai (Alseodaphne semecarpifolia) and Halmilla (Berrya ammonilla). It is from these forests that most of the heavy hardwoods supplied to Government Departments for railway sleepers, buildings, bridges, harbour works, &c., come while the valuable satinwood is also confined to this Zone. Most of the Dry Zone forests are managed on a selection system with a girth control limit for exploitation. A considerable area in this zone has been planted with teak which does not occur naturally in Ceylon.

The Wet Zone Forests are the " Tropical Wet Evergreen " type. These forests are characterized by being composed of a very large variety of species most of which yield timber of somewhat inferior and non-durable quality. An important tree found in this zone is Hora (Dipterocarpus zeylanicus) the timber of which is of considerable commercial importance, while trees producing timbers considered suitable for box making and match making occur in large quantities. Up to the present these forests have not been brought under organized management.

The Intermediate Zone, as the name implies, is the Climatic Zone between the Dry, Wet, and Mountain Zones. It is comparatively small in extent and contains little crown forest. It is in this zone several of the most valuable of the timber trees grown in Ceylon are found. The most important of these are Jak (Artocarpus intergrifolia), Lunumidella (Malia dubia), Milla (Vitax altissima) and the exotic large leaved mahogany (Swietenia macrophylla). These species are grown in artificially established plantations of which there are now approximately 4,200 acres in this zone.

* Areas already Reserved by Proclamation.

The Mountain Zone forests are of the usual "Tropical Montane" type. They contain little timber of any value but they are of considerable importance as yielding fuel to the towns and estates which are situated in the Hills. These forests are at present managed on a clear felling system followed by the establishment of plantations of exotics, principally the Monterey Cypress (Cupressus macrocarpa) and a variety of different Eucalyptus species. At present there are approximately 5,200 acres of these plantations.

The Forest Policy of Ceylon is to make the Island as far as possible self-supporting in respect of its timber and fuel requirements. At present large quantities of timber are imported, principally teak for constructional purposes and softwoods for the shipment of economic products such as tea, rubber, desiccated coconut, &c. Little timber is exported from Ceylon, the most important of such material being high grade satinwood. The Central Timber Depôt, where Government timber for export is stored, is at Slave Island, Colombo.

The Forest Department, which is under the general control of the Executive Committee of Agriculture and Lands, has its headquarters in the Secretariat, Colombo. In addition to the Conservator of Forests, the following forest officers have their offices at Headquarters :—

The Divisional Forest Officer, Working Plans.
The Divisional Forest Officer, Silvicultural Research.
The Divisional Forest Officer, Exploitation.
The Divisional Forest Officer, Utilization Research.

Territorial Divisional Headquarters are situated at :—

Colombo	..	.. South-Western Division.
Kurunegala	..	.. North-Western Division
Jaffna	..	.. Dry Zone Division
Nuwara Eliya	..	.. Up-country Division

Though for many years the forests of Ceylon have been ruthlessly and unsystematically exploited, the activities of the Forest Department are now directed to see that the forests are brought under regular management and the yield permanently sustained. For this purpose careful stock maps showing the contents of the Forest Reserves are being prepared and Working Plans compiled to control and systematize management.

In addition to the introduction of Working Plans, organized silvicultural research has been started so that plans of management can be based on essential proven silvicultural data. Much still has to be done, not only to popularize the indigenous timbers of known usefulness, but also to discover new uses for local timbers hitherto considered of little value. For this purpose a special utilization research officer has recently been appointed.

It has recently been decided that the protection of wild life, both animal and plant, should also be one of the duties of the Forest Department. The Fauna and Flora Ordinance of 1937, provides for the proclamation of land as National Parks, Sanctuaries, and areas where wild animals are completely protected, and also controls the times and places when and where shooting can take place. This same ordinance provides for the appointment of the Conservator of Forests as Game Warden and also for other protective officers.

IN A MATCH FACTORY.

SURVEY.

The Survey Department.—As no land can be alienated or otherwise dealt with by the Crown until it has been surveyed and demarcated, the work of the Survey Department is of great importance. Its chief activities may be summarized as follows :—

(*a*) Application Surveys, *i.e.*, a system of sporadic surveys, usually made on "Applications" by members of the public, to buy or lease Crown land, or on "Crown Requisitions" from Government officials for such surveys.

Included under this head are :—

(i.) Acquisition Surveys, or surveys undertaken for the acquisition of private land for Government or public purposes.

(ii.) Town Surveys—to further the development, the administration, and the assessment of towns by Local Bodies, and to assist town planning schemes.

(iii.) Forest Surveys, which include the demarcation of forest boundaries and fauna or flora reserves.

(iv.) Land Development Surveys or surveys arising from the Land Development Ordinance, No. 19 of 1935, which provides for the systematic development and alienation of Crown lands in the Island.

(v.) Engineering Surveys which are chiefly undertaken with a view to providing plans and sections for use in the investigation and development of irrigation schemes by the Irrigation Department.

(*b*) Block Surveys, or the continuous survey of large areas of land for the final settlement of claims as between the Crown and private owners.

Topographical Surveys.—In addition, the Survey Department, having completed a Topographical Survey of the Island, is now engaged upon a Topographical Revision Survey. Sectional maps for the whole Island on the scale of 1 mile to the inch can be obtained at the Surveyor-General's Office, Colombo, at "Ceylon Products", Chatham street, Colombo, and at the Ceylon Cottage Industries showroom, York street, Colombo, and numerous other small scale maps are also published. The chief of these are :—

4-mile and 8-mile to the inch maps of the Island.
8-mile to the inch motor maps.
4-mile and 24-mile to the inch agricultural maps.
Aviation map of Ceylon and South India on the scale of 1/1,000,000.

Relief Models.—Plaster of Paris and Paper Models on a horizontal scale of 1 mile to 1 inch, and a vertical scale of ½ mile to 1 inch can also be obtained on application to the Surveyor-General's Office, Colombo.

Other Work of the Survey Department.—The other work of the Survey Department is not directly connected with the subject of this chapter. It includes—

(1) Trigonometrical Surveys.
(2) Precise Levelling.
(3) The Observatory and Meteorological Stations.

COLOMBO AIR-PORT.

Annual General Report for 1938 on the Economic, Social, and General Conditions of the Island.

CHAPTER I.

Introductory.

In the middle of the nineteenth century, economists were thinking in terms of free trade and the wealth of nations which flowed and circulated through the different countries with beneficial effects to all concerned as a result of such unrestricted private enterprise. At the end of the century various countries found themselves bound in the interests of their internal economy to resist the operations of foreign traders. First came the Boer War and then the Great War in which economic considerations played a greater part than is generally supposed.

Twenty years after the close of the Great War the shadow looms once more overhead. Once more the issue is being raised as to what limits should be set to the expansion of Italy and Greater Germany, and once more small nations are faced with the problem as to what kind of economy they must be ready to adopt in the shifting and turbulent scheme of things.

For Ceylon the question for solution is whether she should attempt to develop her foreign trade at the expense of her internal development, or whether she should be prepared to sacrifice or acquiesce in a diminution of her export trade and concentrate on the production of her own food, and as far as possible produce her own clothing.

The best solution seems to lie in the adoption of a middle course. The time is long past when nations can adopt an *ersatz* policy with success and live at home. With the progress of modern machinery, modern ships, modern aeroplanes and wireless, the world has shrunk in size and it is impossible for nations to live separate and secluded existences. Trade has become international and tends to create more and more intimate contacts between nations. Nations have become more and more interdependent. But because of certain pages in their history and individual differences in their mental and moral make-up and their physical, climatic and geological endowments, some nations enjoy the advantage of being leaders. They are the stars around which the smaller nations cluster in the hope that they will form into stable bodies or constellations. We have such groups as the British, French, Dutch and Belgian Colonial Systems which enjoy a high degree of prosperity and security because of the partnership and the protection.

Now, Ceylon trade has flourished because of her share in such a partnership. A study of the customs returns shows the large share of international trade she enjoys by reason of the production of tea and rubber; and though her oil products form a small percentage of the world's output, they are a substantial part of the Empire's production. The same thing is true of her plumbago, citronella and cinnamon. Without these she could not pay for many of the articles which she imports and the standard of living would be much lower. That is what is meant by saying that Ceylon enjoys the benefit of international interchange in a great partnership. That is one side of the picture. On the other side lies consciousness of the fact that Ceylon imports two-thirds of her food requirements, and hence the ready response which is accorded to those who raise the cry of " Back to the Land ".

Thus, we find in Ceylon two influences at work which require to be nicely balanced. The Chamber of Commerce, and, in a small measure, the newly formed Department of Commerce and Industries, are making steadfast efforts to increase the foreign trade of Ceylon whilst the Department of Agriculture is making herculean efforts to ensure that Ceylon shall be self-sufficing in the matter of food. The latter policy cannot reasonably be resented by the countries from which at present she imports her food-stuffs; any scheme for increased food production must find justification in the fact that there is a marked annual increase of population and a corresponding increase of unemployment which can only be remedied by a return to agricultural occupations. The industries which might absorb a part of the unemployed or underemployed surplus population have yet to be built up. A beginning of industrialization has been made, but it is only a small beginning.

The Economic Survey begun in 1936 still continues, and indicates the gaps which have to be filled. The steps taken by the several Ministries during the past year illustrate the manner in which the various problems are being tackled.

The Ministry of Agriculture has marked out 16,500 acres for colonization. At the end of 1937, about 8,000 acres had been distributed among 2,500 allottees. In 1938, another 1,300 acres had been allotted to three hundred and forty-nine peasants. The total expenditure on colonization schemes in 1938 was four lakhs of rupees. The pace is comparatively slow, but depends on the rapidity with which new areas can be provided with irrigation facilities. In the loan recently floated a sum of fifteen million rupees is included for irrigation works. There are four major works under construction—(1) the Topawewa Scheme, (2) the Elehera Irrigation Scheme, (3) the Minipe-ela Scheme, and (4) the Ridibendi-ela Scheme. The cost of the first scheme is estimated at Rs. 1,740,000, and 21,500 acres will be brought under it. No. (2) is a smaller work estimated to cost four and a half lakhs. Work has started. Under No. (3), estimated at a million rupees, 10,000 acres will be irrigated. Work is proceeding. No. (4) will irrigate 6,000 acres and will cost the same as No. (2). It is difficult to find man-power to open up all the new land. The difficulties of a farmer's life are great, of pioneer farming still greater. The project of granting monopoly rights to a company for the purpose of milling and encouraging the intensive cultivation of rice is being considered. It should pass from discussion to execution before long.

Great impetus is being given to agriculture by the opening of Practical Farm Schools, classes for agricultural learners, and experiment stations.

Rubber Budwood nurseries have beeen opened in the Kalutara, Galle and Kegalla Districts; new experiment stations are in the course of construction at Horana and Mapalana. An area of 200 acres, by way of experiment, was opened at Kottukachchiya in the Puttalam District and planted with cashew. A development station for citrus, mango and paddy was opened at Minneriya, and a small sugar experiment station at Killiveddi in the Eastern Province. Livestock have been imported from India and from Great Britain with a view to effecting an improvement in the local breed of cattle. A memorandum on food production embodying schemes for making Ceylon self-supporting in regard to food has been prepared. Autarchy is the order of the day.

Meanwhile, the Ministry of Labour, Industry and Commerce, on the principle that agriculture must be supported by industry, has opened Unemployment Bureaux, first in Galle and then in Colombo and Kandy. A census of unemployment in the City of Colombo was taken. An Ordinance regulating the employment of shop assistants was passed and will shortly be brought into operation.

A new model coir factory was completed early in the year, and a superintendent appointed. A workshop for the Industrial Engineer was nearing completion in December. New demonstration parties were placed at Pottupitiya for coir manufacture, and at Morontuduwa for mat weaving in the Kalutara District.

Experiments were made in the manufacture of plywood, cement and paper. A plywood expert will be shortly imported to erect a factory. Negotiations for the erection of a cement factory by a well-known Indian Company are proceeding.

The subject of Civil Aviation was transferred to the Ministry of Communications and Works, and the Director of Public Works was appointed Director of Civil Aviation. The Air Navigation Regulations 1938 (Ceylon) were published in the *Government Gazette* of March 11, 1938. The Empire Air Mail Service was officially inaugurated by His Excellency the Governor (frontispiece) on February 28, 1938, and, thus, Ceylon comes on the Air Map.

Tenders have been invited by the Crown Agents for the completion of the Aberdeen-Laxapana Hydro-Electric Scheme.

In January, 1938, three four-coach articulated Diesel units were imported. (p. 4).

1938 also saw the inauguration of the Ceylon Savings Certificates Scheme. Arrangements were made for the issue of the first certificates at 9 o'clock on September 19.

A new Motor Ordinance was passed under the auspices of the Ministry of Local Administration. The Ordinance provides for a Motor Traffic Advisory Board of six members to assist the Commissioner in fixing, bus routes, fares and time tables, and licensing lorries, and a Tribunal of Appeal composed of three members. Compulsory insurance against third party risks is provided for.

A selection—final, it is hoped—has been made of a site for the University.

A new division of nutrition under the control of the Director of the Bacteriological Institute was created during 1938 for the purpose of carrying out investigation into the food and nutritional deficiencies of the local population. This division is undertaking laboratory and field work, lectures, propaganda and research work.

Tourism (Down South).

A brief reference to places of interest will conclude this section. This year the reader will be taken to places in the South possessing historical and antiquarian as well as scenic interest. No doubt he will want to explore some of the usual sights in Colombo. The tourist may be unable to resist a visit to the Silk Shop (p. 9), and the snake charmer still holds an irresistible attraction (p. 13). The thirsty traveller must needs quench her thirst with Nature's purest drink (p. 17). No visit is complete without a rickshaw ride (p. 21). The novelty of being drawn by a human steed is one that few do not wish to experience. If the visitor has time, he may treat himself with a visit to the zoo at Dehiwala (p. 26), and as Mount Lavinia is within striking distance, he may proceed thence to the very fashionable hotel (p. 32). Those who are more fortunate in the matter of leisure will go further South.

On the way he will encounter unexpected beauty in the Kumaramahavihare at Dodanduwa (p. 39). The wall paintings (pp. 46, 51) have something of the characteristics of Egyptian art. After Dodanduwa, the next stopping place is Galle, where he will put up for the night. One enters Galle through a gate of the ramparts (p. 57), and from the ramparts one may see the harbour (p. 62), the clock tower (p. 69) and the sea (p. 74). Next to the hotel is the old Dutch Church (p. 79), which will repay the lover of antique things for his interest. Next, the lure of the sea draws the visitor further South. A magnificent view of the lighthouse at Dondra,the southernmost point of the Island,claims his admiration (p. 84). There is also a temple with beautiful carvings at Dondra. This warrior (p. 89) might have adorned the pages of Walter Scott. Then the traveller may pass on through spacious country and long straight roads to Hambantota and Kirinda, where the salt is made by nature (p. 95) the cheetah haunts the twilight and the buffalo earns his keep by honest toil (p.100). It is a long and uneventful journey to Wellawaya unless one has time to go to the game sanctuary area. An occasional deer or jackal crosses the lonely road. On rare occasions one may hear of a rogue elephant. He may be shot on sight, but one must beware how one approaches that vicinity. A licence is needed for permission to shoot game, and can be had from the local Kachcheri. The close season is from April 30 to October 31. The journey is long and lonesome till one gets to Haputale, but the scenery is delightful, especially near the Diyaluma Falls (p. 105). From Haputale one goes to Bandarawela where there is trout fishing to be had. A short journey brings one to Nuwara Eliya where, if one is lucky to arrive in the time of the year, one may see a tennis tournament (p. 110) and a Race Meet (p. 116) in progress. There I shall leave the traveller to ponder over what he has seen 6,000 feet above sea level, and wondering what other climatic surprises Ceylon has in store.

Situation and Dimensions.

Ceylon lies between 5° 55′ and 9° 50′ N. latitude and 79° 42′ and 81° 53′ E. longitude. The greatest length of the Island from north to south, *i.e.*, from Point Palmyra to Dondra Head, is 270 miles; its greatest width 140 miles, from Colombo on the west coast to Sangamankanda on the east. Its area is 25,332 square miles, nearly the same as that of Holland and Belgium, or about half the size of England.

Facilities provided at the Passenger Jetty for the storage of baggage are described on page 65. Passengers' baggage is defined by the Customs Regulations to mean *bona fide* baggage (which includes wearing apparel and personal effects) of a passenger accompanying him or arriving in Ceylon within one month, before or after his arrival, or within such time as the Collector of Customs in the circumstances deems reasonable. With certain exceptions, passengers' baggage is exempt from duty.

The Ceylon Government Railway serves the principal towns of the Island, and offers visitors excellent facilities for inland travel. Cheap first class tourist tickets obtainable from the Booking Office at the Jetty, the Fort Station, and recognized tourist agents at Rs. 50 (£3. 15*s.*) for two weeks and Rs. 75 (£5. 12*s.* 6*d.*) for one month, permit tourists to travel 951 miles of railway and visit the most important and historic

towns. Servants accompanying tourists are issued third class tickets at Rs. 15 (£1. 2*s*. 6*d*.) for two weeks and Rs. 25 (£1. 17*s*. 6*d*.) for one month. These are issued throughout the year.

Similar "Tour Ceylon" tickets priced first class Rs. 40, second class Rs. 20, and third class Rs. 10 (half these rates for children under twelve years) were again issued during the Christmas holidays this year. These tickets are available for 14 days unlimited travel and will also be issued during the forthcoming Easter holidays.

The distances from Colombo to some of the principal towns of the Island, and information regarding sleeping and restaurant cars, &c., are found on pages 69–72.

There is no legal tariff for taxi-cabs within the municipal limits of Colombo, but the usual scale of fares is as follows :—

For the first half mile	50 cents
For each subsequent ½ mile up to 1 mile	12½ ,,
For each subsequent mile	75 ,,

Extra charges are made for each passenger over two, and for each piece of luggage other than hand luggage. A higher scale of fares is charged in the case of taxi-cabs hired between the hours of 9·30 P.M. and 7 A.M.

The above rates apply only to places within the municipal limits of Colombo. For trips to places outside Colombo Municipality special terms should be agreed upon *before starting*. The hiring-car fares to such places vary from 40 cents to Re. 1 per mile, with extra charges for detention.

There are hotels of the European type in Colombo, Kandy, Nuwara Eliya, Galle, and Anuradhapura ; the rates are usually Rs. 9 a day and upwards, the usual charge for first-class accommodation being Rs. 12 a day. Cold Storage Companies in Colombo supply ice and frozen meats and other foods by rail. In addition to hotels there are about 170 resthouses in various parts of the Island (marked on the ordinary motoring map), many of which are very delightfully situated beside the sea or some river or tank.

Useful information may be had from the new handbook published by the Automobile Association of Ceylon. "How to see Ceylon" by Bella Sidney Woolf is a favourite guide book for tourists. A more ambitious and informative book is Bassett's Romantic Ceylon, a recent addition to the voluminous literature on the subject.

Climate.

On the whole, the climate of Ceylon is tolerable for the tropics ; the accessibility of the hills is a great boon to the dwellers in the plains, and a change to the sea is beneficial to those who live in the hills. In the low-country, the districts which have been opened in rubber, coconuts, and other products are generally fairly healthy, but in the unopened localities malaria is common.

Temperature.—With regard to temperature, the range of variation at several stations is shown in diagram No. 1, facing this page.

The low seasonal variations will be noted, but it will be seen that the differences between the temperatures of low-country and up-country stations are considerable. The highest shade temperature registered in Ceylon was 103·7°F. at Trincomalee in May, 1890, and the minimum air temperature 27·1°F. at Nuwara Eliya in February, 1914. An extreme

Annual averages (in inches) are shown to the right of the name of each station.

Block by Survey Dept. Ceylon.

temperature of 103·7°F. is not excessive, but the humidity is considerable, the annual average percentage of saturation being generally about 80, in Galle and Nuwara Eliya 84, in Colombo, Jaffna, and Badulla 82, in Kandy 80, in Batticaloa 78, in Trincomalee 76. At Colombo, the "hot weather" season may be said to extend from March to May, and the "cold weather" from December to February. July and August are often pleasant, particularly on the west side of the Island.

The mean temperature for the year, in the low-country, rarely varies more than 1° to 2°F. from 80°F. Nuwara Eliya, at an altitude of 6,000 feet, has a mean yearly temperature in the neighbourhood of 60°F.

Rainfall.—As is generally found in the tropics, however, the seasons are distinguished by differences in rainfall, rather than pronounced variations in temperature. The change in the direction of the monsoon winds, from south-west to north-east, causes a corresponding change in the location of the heaviest rain, which is usually experienced to windward of the hills, while during the intermonsoon seasons, local wind circulations are liable to give rain in any part of the Island.

The annual average rainfall varies from about 40 inches in the north-west and the south-east to over 200 inches in some parts of the interior.

The annual averages (1911–1930) are 91 inches at Colombo, 87 inches at Kandy, and 92 inches at Nuwara Eliya. Diagram No. 2, facing this page, shows the average monthly rainfall of 12 selected stations.

History.

The earliest inhabitants of the Island are thought to have been the Nagas and Yakkhas, the latter being perhaps now represented by the Veddas, a fast fading race. Legendary history has it that the first invaders were Aryans from the North of India, who, under the leadership of Vijaya, overcame the aborigines and established the Sinhalese dynasty. Early attention appears to have been paid by the invaders to irrigation works, agricultural development, and other branches of civil administration, and by the end of the third century A.D. a comparatively advanced stage of civilization had been reached.

The history of Ceylon down to the sixteenth century may be divided into two parts, viz., the period of the Sinhalese *Mahavansa*, *circa* 500 B.C. to 300 A.D., and that of the *Suluwansa*, from *circa* 300 A.D. onwards. The first period is one of increasing development and expanding civilization, connected chiefly with the progress of Buddhism, which was introduced about 247 B.C. The second period is one of ever-increasing pressure from the Tamils, Pandyans, and Cholas from India, with occasional success on the part of the Sinhalese, particularly during the reign of their famous king, Parakrama Bahu I. (1153 to 1186 A.D.). A natural limit occupation resulted from the constant warfare, and the Tamils known as Jaffnese were left in possession of the north of the Island.

In the sixteenth century the Portuguese formed settlements on the coasts of the Island; in the next century they were dispossessed by the Dutch. The Portuguese must be credited with the introduction of Catholic Christianity in the Island, and the Dutch with the introduction of Roman law. The impression made by the latter on the social customs of the Ceylonese remains to this day. More recently commerce has brought about a peaceful invasion of Moors, officially styled Muslims, and Malays who are found in large numbers especially in Hambantota,

and are reckoned to be the backbone of the Police force. In 1796 the British took possession of the Dutch settlements in the Island, which were then annexed to the Presidency of Madras, but five years later, in 1802, Ceylon was constituted a separate Crown Colony. In 1815, the districts of the interior, which had maintained their independence under the kings of Kandy, were acquired by Great Britain as the result of a rebellion against the Kandyan king, and the whole Island was thus united under the British rule.

Principal Languages.

Sinhalese and Tamil are the two chief vernacular languages in the Island, the former being spoken by the Sinhalese who chiefly inhabit the western, central and southern portions of the Island, and the latter by the Tamils inhabiting the northern and eastern parts and by the immigrant estate population. English is in general use among the people of the upper and the middle classes of all communities.

CHAPTER II.

Government.

The Constitution.

Until 1931 the Constitution of Ceylon was of the Crown Colony type, the government being vested in the Governor assisted by Executive and Legislative Councils. A description of the old Constitution will be found in the Annual General Reports of 1929 and previous years.

In July, 1931, the then existing Constitution was superseded by a new Constitution, based on the recommendations of a Special Commission on the Constitution appointed by the Secretary of State for the Colonies which visited Ceylon in 1927–28. The new Constitution was formulated by the Ceylon (State Council) Order in Council, 1931. The principal constitutional changes involved are described below.

The Legislative Council was dissolved in April, 1931, the Executive Council in July of the same year, and their place was taken by a "State Council" having both legislative and executive functions, which met for the first time on July 7, 1931. The new Council consists of three official members, fifty elected members, and not more than eight members nominated by the Governor. Neither an elected nor a nominated member may be a person holding any public office under the Crown in Ceylon.

The three official members of the State Council are styled the Officers of State. They are members of the Council *ex officio*, as the Chief Secretary, Legal Secretary, and Financial Secretary to the Government respectively. The Constitution provides that they shall have all the rights and privileges of membership of the Council and of the Board of Ministers (a body which will be referred to later), save the right to vote on any question before the Council or the Board.

All elected members are elected on a territorial basis, communal representation which was a feature of the old legislature having been abolished. The franchise is very wide. It extends, with a few exceptions to all British subjects of either sex who are, at least, twenty-one

Photo by Werner Conitz. *Courtesy Govt. Tourist Bureau.*

SILK SHOP.

years of age and are domiciled in Ceylon. In addition, persons not so domiciled are permitted to vote if they possess a certain literacy and property qualification, or have received a " certificate of permanent settlement " from a Government Agent or Assistant Government Agent.

Eight additional members are nominated by the Governor after a general election, the object of their appointment being, in the words of the Special Commission,* " to make the State Council more generally representative of the national interests ".

On the first assembly of a new Council, and after the election of a Speaker, the members proceed by secret ballot to divide their total number (excluding the Speaker and the Officers of State) into seven standing committees styled " Executive Committees ", which are required to be as nearly as possible equal in number of members†. Each Committee is charged with the administration of one of seven groups of subjects and functions specified in the Order in Council under the following headings :—

I. Home Affairs.
II. Agriculture and Lands.
III. Local Administration.
IV. Health.
V. Labour, Industry and Commerce.
VI. Education.
VII. Communications and Works.

After the election of the Executive Committees, each Committee proceeds to elect by secret ballot a Chairman, and the Chairman-elect of each Executive Committee is then appointed by the Governor as Minister for the group of subjects and functions which his Committee has to administer. It is within the discretion of the Governor to decline to appoint as Minister any member elected Chairman of an Executive Committee. Subjects and functions not allocated to Executive Committees are divided by the Order in Council into three further groups one of which is placed in the charge of each of the Officers of State, who have no Executive Committees associated with them in the administration of these groups.

The duties of Executive Committees may be summarized as follows :—

(*a*) Preparation of the annual estimates of expenditure of the departments under their control, for submission to the Board of Ministers.
(*b*) Similarly, the preparation of supplementary estimates.
(*c*) Consideration of executive business relating to their own subjects and functions, whether laid before them by their Chairmen or by private members, or referred to them by the Council or the Board of Ministers.
(*d*) Consideration of proposed legislative measures falling within their scope.

The decisions of Executive Committees which are of sufficient importance to require the approval of the Council are submitted at meetings of the whole Council in the form of reports, which the Council may accept or

* Page 101 of the Report of the Commission.
† The members subsequently elected as Deputy Speaker and Deputy Chairman of Committees cease upon their election, to be members of Executive Committees.

reject, or refer back to the Committee, but *may not amend*. A report accepted by the Council is submitted to the Governor by the Speaker for ratification. But the decisions of Executive Committees in financial* matters are submitted by the Committees to the Board of Ministers, and by the Board to the Council.

The Board of Ministers consists of the three Officers of State and the seven Ministers, but, as stated above, the Officers of State have not the right to vote on questions before the Board. The Chief Secretary is *ex officio* Chairman of the Board, and there is also a Vice-Chairman, elected by the Board from among the Ministers, who is the representative of the Board in the Council and is styled the Leader of the State Council. The most important function of the Board of Ministers is the preparation of the annual estimates of revenue and expenditure for the Island, and of supplementary estimates of expenditure. The annual and supplementary estimates of the different departments of Government are submitted by the Officers of State and Executive Committees to the Board, whose duty it is to revise them and, if and when approved, to submit them to the State Council, taking full and collective responsibility for them. No financial* measure may be introduced in the State Council except by an Officer of State or a Minister, and with the approval of the Board of Ministers. The Board of Ministers also determines the order in which any business, whether executive or legislative, to be brought before the Council either by the Board or by the Executive Committees or Officers of State, is to be despatched, and prescribes the procedure for the settlement of questions affecting more than one Executive Committee.

The ordinary life of a Council is four years. But the Constitution provides that the Governor may dissolve the Council at any time, and shall dissolve it if the whole of any Annual Appropriation Bill is rejected, or if the decision of the Council on a financial* measure, or on a motion expressly directed to test the confidence of the Council in the Board of Ministers, makes it apparent, in his opinion, that the Board no longer retains the confidence of the Council. Up to the time of writing a dissolution has never occurred. In certain circumstances the life of the Council may be prolonged. It was prolonged beyond its 4-year term in July, 1935, principally on the ground that a new Council would not be able to deal adequately with the Budget framed by the old Council and which was not discussed and passed till September, 1935. The general election was held in February, 1936, and the new Council came into being on March 17, 1936.

† The Governor retains the power to certify any Bill, motion, resolution, or vote as being of paramount importance, or he may declare that it is essential to give effect to the provisions of the Order in Council. In either event the measure has effect as if it had been passed by the Council, subject to disallowance by His Majesty the King in the case of Bills and to revocation by the Secretary of State in the case of other measures.

‡ Power is also reserved to the Governor to declare that a state of emergency exists, and thereupon to assume control of any Government department.

The appointment, promotion, transfer, dismissal, and disciplinary control of public officers are vested in the Governor (with power of delegation to heads of Government departments), and the Order in Council contains clauses for the preservation of their conditions of service.

* As defined in Article 57 of the Order in Council.
† Article 22 of the Order in Council.
‡ Article 49 of the Order in Council.

For full details of the Constitution, reference may be made to the Order in Council, which is reproduced in the Ceylon Government Manual of Procedure.

The Ceylon Civil Service.—Ceylonese Cadets are selected by open competitive examination held by the Civil Service Commissioners simultaneously in England and in Ceylon. European Cadets are selected by the Secretary of State for the Colonies in the manner prescribed for the selection of persons for the Colonial Administrative Service. A few appointments are also made locally to the Civil Service. The Civil Service furnishes officers for the general administrative and secretarial work in the Island.

Revenue Districts.—For administrative purposes Ceylon is divided into nine Provinces, which are subdivided into districts, as shown in the following table :—

Provinces.	Districts.	Provinces.	Districts.
Western	.. Colombo, Kalutara	North-Western	.. Kurunegala, Puttalam-Chilaw
Central	.. Kandy, Matale, Nuwara Eliya	North-Central	.. Anuradhapura
Southern	.. Galle, Matara, Hambantota	Uva	.. Badulla
Northern	.. Jaffna, Mannar, Mullaittivu	Sabaragamuwa	.. Ratnapura, Kegalla
Eastern	.. Batticaloa, Trincomalee		

The Government Agents.—The posts of Government Agents—one in each of the nine Provinces—are held by senior Civil Servants. To the Government Agents is entrusted the general administrative work of their Provinces, while their Kachcheries, or offices, are the provincial treasuries for the receipt of revenue and the payment of the local expenses of Government.

The Government Agents hold a number of other official positions, and preside over some local bodies in their Provinces. They are, as a rule, assisted by one or more Assistant Government Agents, who are in charge of revenue districts or else perform special duties at the provincial headquarters.

The Headmen.—The officer next subordinate to the Government Agent or Assistant Government Agent is the chief headman, who is differently styled in different districts : " Mudaliyar " in the maritime Sinhalese districts, " Ratemahatmaya " in the Kandyan districts ; " Maniagar ", " Adigar " and " Vanniya " in the Tamil districts. There are about 104 chief headmen in the Island. In some cases the Mudaliyar is assisted by one or more " Muhandirams ". Next to the chief Headman ranks the superior headman, called in the maritime Sinhalese districts " Vidane Arachchi ", in the Kandyan Sinhalese districts the " Korala ", and in the Tamil districts the " Udaiyar ". There are about 610 superior headmen in Ceylon.

Lastly comes the village headman, who is in charge of one or more villages, and whose jurisdiction is the administrative unit. The number of village headmen is about 3,800. In addition, there are peace officers, irrigation headmen, and others appointed for special purposes. A Commission was appointed in 1934 to inquire into and report on the working of the existing Headmen System with a view to its improvement or replacement partly or wholly by any other system. The Commission's report is contained in Sessional Paper XXVII. of 1935. This report was reviewed by the Home Committee in 1936. Its recommendations have

been debated by the State Council who approved that the principles underlying the following recommendations of the Executive Committee of Home Affairs be accepted :—

(1) Creation of a probationer service in lieu of the existing Chief Headmen Service which should be abolished within two years from the date of the passage of the motion. Provided that recruitment to such service is made on the following basis :—

(1) Candidates should be between the ages of 22 and 25 years.
(2) Each candidate should have passed the Senior Certificate or equivalent examination.
(3) He should be of good character.
(4) Ability to read and write with competence the vernacular language of any area.
(5) Certificate of fitness from a qualified Medical Officer to do field work is produced.
(6) A Selection Board, consisting of the Minister of Home Affairs, the Government Agent of the Province, and one Unofficial Member to be nominated by the Governor should interview the candidate who will be selected on the results of a written and *viva voce* examination.
(7) The Island should be divided into 3 administrative areas for the purpose of the probationer service, viz., Kandyan, Tamil speaking, and Low-country and a probationer recruited for any of the areas should be transferable within that area.

(2) Immediate abolition of the eight posts of Muhandiram, and later of the superior headmen—Vidane Arachchi, Korala and Udaiyar, whose duties will be performed by minor headmen of an improved type when available.

(3) Gradual establishment of two grades of minor headmen enlisted on an improved basis of recruitment.

(4) Progressive transference of the work of minor headmen to local bodies supervised by the central authority and gradual extension of the existing limits of minor headmen's divisions.

(5) Change of designation of Chief Headmen and use of a uniform nomenclature—" Divisional Revenue Officer " in place of " Mudaliyar ", " Ratemahatmaya", " Vanniya ", and " Maniagar ".

(6) Elimination of caste names in minor headmenships, and the adoption of a uniform nomenclature like " Police Vidane " in place of " Police Headman ", " Gan-Arachchi ", " Vidane Duraya ", &c.

(7) Adoption of the following dress for minor headmen :—

A dark blue or black coat, a white cloth and silver badge on ordinary official occasions, any special form of dress now in use being worn by all minor headmen of the Province, on all official ceremonial occasions.

Local Government.

With the inauguration of a new Constitution for the Island in July, 1931, an Executive Committee of Local Administration was elected by the State Council to supervise, control, and develop local government, and a department of local government under the Commissioner of Local Government was created as the executive instrument of the Committee.

Photo by Werner Conitz. *Courtesy Govt. Tourist Bureau.*

SNAKE CHARMER.

The local duties in regard to sanitation and public thoroughfares have for long been entrusted to a number of local authorities whose members are the nominees of the Governor with the addition in most cases of persons elected by the inhabitants. In Colombo there is a reformed Municipal Council, whose members (of either sex) are now elected by the ratepayers resident within the limits of any ward and (*a*) owning property assessed at an annual value of not less than Rs. 10 or (*b*) occupying property in respect of which the person in possession or occupation pays a monthly rent of not less than Re. 1, or (*c*) having an income of not less than Rs. 15 a month ; and by the ratepayers not resident within the Municipality but owning property assessed at an annual value of not less than Rs. 600 and situated within the limits of a ward of the Municipality. The Mayor is elected annually from among the Councillors and not a Civil Servant as formerly. In Kandy and Galle, there are Municipal Councils whose Chairmen are members of the Civil Service. At least half the members are elected by the ratepayers, all those possessing a house of the annual value of Rs. 180, or every tenant who pays a monthly rental of Rs. 15 or is a graduate of a university being qualified to vote.

Until the end of 1932 in eleven of the smaller towns there were Urban District Councils with elected Chairmen, two-thirds of the members being elected by the ratepayers and one-third being nominated by the Governor. No further Councils were constituted in the absence of a local demand. On the recommendation, however, of the Executive Committee, 16 more such Councils were established from January 1, 1933, in place of 10 of the Local Boards of Health and Improvement, in 5 of the small towns previously administered by Sanitary Boards, and also in place of the Board of Improvement of Nuwara Eliya.

Only one small town is now administered by a Local Board of Health and Improvement, viz., Minuwangoda, as it is too small to support an Urban District Council. The Government Agent of the Western Province is the Chairman. The members are the District Engineer, the Medical Officer of Health, and 3 elected members.

Groups of smaller towns, frequently no larger than roadside bazaars, are administered by the Sanitary Boards of the various districts, consisting of the Government Agent, or Assistant Government Agent, two local officials of the Public Health Department and the Public Works Department, and not more than four nor less than two members nominated by the Governor. This method of local administration for a number of towns in a district is carried on from the District Headquarters with a staff consisting partly of officers whose salaries are met proportionately by the various towns and partly of officers lent by the Public Health Department. This cheap and reasonably efficient form of local administration is, however, now said to be out of favour because the Boards contain no elected members. The Executive Committee is not recommending the inclusion of any further towns in the administration of these Boards, and has under consideration some other form of administration of a more popular type.

In the rural areas, there are Village Committees for groups of villages. These groups are divided into wards, each of which elects one member. In 1932 an Ordinance was passed precluding officials from being elected as Chairmen. These Committees deal with minor local affairs and the working of rules connected with local customs.

Roads other than main thoroughfares and other than those in charge of the local authorities mentioned above, are maintained by District Committees, while certain educational matters have been entrusted to District Education Committees.

CHAPTER III.

Population.

Population.—Population data are collected, as in almost every other country, by means of a Census, which is taken decennially in Ceylon. The last decennial Census was taken on February 26, 1931, but its scope was limited owing to the financial crisis. At that Census, Ceylon had (inclusive of the military and the shipping) a population of 5,312,548 which was 17·9 per cent. more than that in 1921. Since 1871, when the first decennial Census was taken, the population has steadily increased. The Island is fairly thickly populated; and at the last Census it had a density of 210 persons per square mile and ranked above India, France, and Denmark, and somewhat below Japan.

Statistics of races were not collected in 1931 except in the Colombo Municipality and on the estates, but rough estimates based on the Census of 1921 are given below :—

Race.	Colombo Town.	Estates.	Estimates for Other Areas	Estimated Total.
Europeans	3,340	2,814	2,999	9,153
Burghers and Eurasians	15,887	2,031	14,397	32,315
Sinhalese	127,927	75,786	3,269,317	3,473,030
Tamils	65,704	698,081	653,692	1,417,477
Moors	44,240	7,496	274,177	325,913
Malays	7,022	1,988	6,967	15,977
Others	20,035	1,738	10,791	32,564
	284,155	790,376*	4,232,340	5,306,871*†

It is estimated on the same basis that there were 3,267,457 Buddhists, 1,158,522 Hindus, 523,066 Christians, 356,888 Muslims, and 938 others at the Census of 1931.

The population (exclusive of the military and the shipping) was geographically distributed in 1921 and 1931 as follows :—

	1921.	1931.	Percentage of Increase.
Western Province	1,246,847	1,445,034	15·9
Central Province	717,739	953,388	32·8
Southern Province	671,234	771,204	14·9
Northern Province	374,829	398,874	6·4
Eastern Province	192,821	212,421	10·2
North-Western Province	492,181	546,966	11·1
North-Central Province	96,525	97,365	0·9
Province of Uva	233,864	303,243	29·7
Province of Sabaragamuwa	471,814	578,368	22·6
Miscellaneous Population‡	751	8	—

Intercensal estimates of population are prepared from the records of vital statistics and of migration, and on this basis the Island had a population of 5,864,000 at the end of 1938.

The figures for Ceylon quoted above do not include those of the Maldive Islands which had a population of 79,281 at the Census of 1931, as compared with 70,413 in 1921.

* Includes 442 persons of unspecified race.
† Excludes the military and the shipping.
‡ Persons enumerated in trains and in the Great and Little Basses.

DIAGRAM No. 4

ANNUAL IMMIGRATION AND EMIGRATION, CEYLON.

IMMIGRATION.....———

EMIGRATION.....- - - - - - -

Reproduced & Printed by Survey Dept. Ceylon. 4 11

Migration.—The large majority of the migrants move to and from India ; and a considerable part of them are Indian labourers. In 1938 the total number of immigrants to the Island was 180,839. Of them 158,652 or 88 per cent. were from India and 47,210 of these were estate labourers.

Of the total 182,202 emigrants in 1938 about 88 per cent. or 159,900 left for India ; and of these 46,807 were estate labourers.

The migration statistics of 1934 to 1938 are as follows :—

	Arrivals.				Departures.			
	From India.				To India.			
	Indian Labourers.	Others.	From Other Countries.	Total.	Indian Labourers.	Others.	To Other Countries.	Total.
1934	140,607	104,813	14,383	259,803	52,481	97,919	14,869	165,269
1935	43,018	104,206	14,259	161,483	43,036	112,667	13,641	169,344
1936	40,803	97,341	15,761	153,905	41,721	105,567	14,582	161,870
1937	51,427	110,517	26,110	188,054	47,924	107,253	23,294	178,471
1938	47,210	111,442	22,187	180,839	46,807	113,093	22,302	182,202

Marriages.—Three Marriage Ordinances operate in the Island, one for the general population, one for the Kandyans, and one for the Muslims. Under the General and Kandyan Marriage Ordinances 31,385 marriages were registered in 1938, as against 30,876 in 1937, and an annual average of 27,008 during the preceding decade. The number of persons married during the year was 11·6 per 1,000 of the General and Kandyan population as against 11·6 in 1937, and 10·7 the average during the decade ending 1937. Among the Muslims 4,081 marriages were registered as against 3,882 in the previous year and 1,490 the annual average during the decade 1928–1937. The Muslim marriage rate was 20·8 per 1,000 during the year, as compared with 20·2 in 1937, and 8·1 the average for the ten years ending 1937.

Divorces.—Dissolution of any marriage registered under the General Marriage Ordinance can be granted only by a District Judge and under the Kandyan Marriage Ordinance by a Provincial or Assistant Provincial Registrar. In 1938, there were 200 dissolutions of General and 559 of Kandyan marriages, as compared with 138 and 690 respectively in 1937. There is usually a large excess of Kandyan marriage divorces over General marriage divorces, largely due to the greater facilities for divorce afforded by the Kandyan marriage law. There were 656 divorces registered among Muslims in the year 1938 as against 450 in the previous year.

Births.—208,389 births were registered in the Island in 1938, as against 216,072 in the previous year and 203,139 the average of the decade 1928–1937. Of these, 105,905 were males and 102,486 females, representing a sex proportion of 1,033 males to 1,000 females. The birth rate was 35·9 per 1,000 of the population, as compared with 37·8 in 1937 and 37·6 the average rate for the decade ending 1937. The birth rate of the Island is comparatively high.

Deaths.—The deaths of 122,299 persons (62,080 males and 60,219 females) were registered in 1938, as against 124,210 in 1937, and 132,325 the average for the decade 1928–1937. The death rate was 21·0 per 1,000 of the estimated population, as compared with 21·7 in the previous year and 24·4 the average for the previous decade.

Infant Mortality.—The deaths of 33,630 infants under one year of age were registered in 1938. The infant mortality in 1937 was 34,180 and the average for the decade 1928–1937 was 35,973. About 27 per cent. of the total deaths in 1938 were those of infants. The infant death rate was 161 per 1,000 births registered, as compared with 158 in 1937 and 178 the average for the ten years 1928–1937.

Causes of Death.—Since 1911 causes of deaths in this country are classified according to the International or Bertillon System. The classification from 1933 was according to the fourth revision of the international list. Owing to the absence of compulsory certification of causes of deaths among a very large section of the population, the statistics, particularly of diseases requiring scientific knowledge for diagnosis, are not absolutely accurate ; but there is reason to believe that a definite, though slow, progress in accuracy is achieved every year. The death rate per million of the estimated population from the more important diseases registered in Ceylon in 1937 and 1938 are shown below :—

Causes of Death.	Death Rate per Million.		Causes of Death.	Death Rate per Million.	
	1937.	1938.		1937.	1938.
Pyrexia	2,437	2,072	Influenza	366	325
Convulsions (under 5 years)	2,103	2,139	Dysentery	344	383
Pneumonia and broncho-pneumonia	1,927	1,757	Ankylostomiasis	299	311
Diarrhoea and enteritis	1,222	1,260	Puerperal septicaemia	6·8*	7·1*
Phthisis	551	556	Bronchitis	258	277
Premature birth	454	461	Enteric fever	154	158
Malaria and malarial cachexia	771	821	Cancer	99	103

* Per 1,000 live births.

CHAPTER IV.

Health.

Hospitals and Dispensaries.

Medical aid is generously provided by the State, there being 115 Government hospitals and asylums, with provision for 12,112 beds.

In Colombo are situated a General Hospital with 935 beds, an Ophthalmic Hospital, a Lying-in Home, a hospital for women (Lady Havelock Hospital), a hospital for children (Lady Ridgeway Hospital), female venereal diseases hospital, a Bacteriological Institute, a Pasteur Institute, and a Dental Institute. At Angoda, 6 miles from Colombo, there is a hospital for infectious diseases, with 168 beds. There are special dispensaries at Kandy, Galle, Jaffna, Batticaloa, and Badulla for the treatment of eye diseases and a clinic at Galle for dental treatment. Treatment with radium is available at the General Hospital, Colombo. A dental van is available to give dental service to rural areas. There are 4 Cottage hospitals for medical relief in remote rural areas where the population is scanty and dispersed.

There is a Lunatic Asylum at Angoda, 6 miles from Colombo, with 1,930 beds and two Leper Asylums, one at Hendala in the Western Province and one at Mantivu in the Eastern Province with 688 beds.

There is a Home for Incurables at Colombo, with 90 beds, which is administered by a Committee of Government officials and representatives of the public, and a Home for chronic and convalescent patients at Ragama with 163 beds.

Photo by Werner Conitz. *Courtesy Govt. Tourist Bureau.*

THIRSTY TRAVELLER.

For the treatment of tuberculosis, there are the King Edward VII. Memorial Anti-Tuberculosis Institute in Colombo, a Hospital Sanatorium of 349 beds for moderately advanced cases that would benefit by treatment at Ragama, and a Sanatorium of 72 beds at Kandana, and one of 44 beds at Kankesanturai on the northern coast.

In addition to Government hospitals, the owners of estates have provided 99 estate hospitals, and in consequence receive a rebate on the export duty on tea, rubber, coffee, cacao, and cardamoms.

Besides the hospitals there are 714 central and branch dispensaries and visiting stations provided by Government. There are also 666 estate dispensaries, which receive free drugs from Government to the value of 50 cents per labourer per annum.

Campaigns.

Campaigns for the control of malaria, ankylostomiasis, leprosy, smallpox, filariasis, and parangi are carried out in the field apart from treatment afforded at hospitals and dispensaries.

Mass treatment against ankylostomiasis is carried out by Medical Officers, Medical Officers of Health, Field Medical Officers, and School Medical Officers in their respective areas with the assistance of trained dispensers and Sanitary Assistants. This has resulted in a marked decrease in the number of patients admitted to hospitals for this complaint.

A good deal of success has been achieved in the control of parangi (yaws). The work is done by Medical Officers of Health and Field Medical Officers as part of their general work and by 2 special wholetime Itinerating Medical Officers who look after areas not under the former. With the larger personnel available, an intensive control campaign is in operation to comb out villages for cases of the disease, place them on cards, treat them, follow them up six monthly and to watch contacts.

In the control of leprosy a special survey of the Island is in progress. As each province is completed, treatment and observation are provided for and those in the infectious conditions segregated. So far the Eastern, Western, Southern, Sabaragamuwa, North-Western, and North-Central Provinces have been completed.

In addition to special trained Vaccinators, Sanitary Assistants, and Public Health Nurses carry out vaccinations against smallpox, under the supervision of Medical Officers of Health and Field Medical Officers. Primary vaccination is compulsory but secondary vaccination is compulsory only during outbreaks of smallpox.

A special survey of filariasis in the Island is being carried out. So far the North-Western and the Southern Provinces have been completed and work is in progress in the Eastern Province.

Anti-Malarial Work.

Anti-malarial work carried out by the Department of Medical and Sanitary Services is under the control of a Departmental Committee with the Assistant Director of Sanitary Services as Chairman and the Superintendent, Anti-malaria Campaigns, Medical Entomologist, Sanitary Engineer, and the Senior Medical Officer as members.

The Superintendent, Anti-malaria Campaigns, is in charge of Campaign centres, the Sanitary Engineer carries out schemes of anti-malaria drainage while the Medical Entomologist investigates problems connected with the vector mosquito and checks the efficiency of anti-larval measures.

Intensive anti-malaria work is carried out in the malarious town areas of Chilaw, Kurunegala, Anuradhapura, Trincomalee, Puttalam, and Badulla, along certain sections of the railway and at Minneriya.

Quinine is exclusively made available free of charge throughout the Island at hospitals and dispensaries as well as at village distribution centres.

As a result of the unprecedented malaria epidemic which started at the end of 1934 and which caused much havoc to Ceylon, a scheme for malaria control and health work has been organized under Field Medical Officers each of whom is placed in charge of an area comprising a population of about 40,000, and carries out work embracing the following :— anti-malaria work, maternity and childwelfare work, school health work, mass hookworm treatment, supervision of dispensaries, holding of special clinics, control of communicable diseases, health propaganda and general sanitary work. The areas included at present in the new scheme of malaria control and health work are the North-Western Province, Province of Sabaragamuwa, Kandy and Matale Districts of the Central Province, the major portion of North-Central Province, Matara and Hambantota Districts of Southern Province, Batticaloa District of Eastern Province, and parts of Province of Uva, Western Province, and Northern Province. This work along with that done by the Medical Officers of Health now forms one scheme of health control for the Island.

Sanitary Engineering Division.

In addition to the diverse engineering problems connected with the malaria control for which purpose this division was formed, matters relating to public water supplies and those to hospitals and public buildings, the design of drainage schemes for towns, sewage disposal and river pollution problems are undertaken by this division.

Estate Sanitation.

Attached to the Department of Medical and Sanitary Services are three Inspecting Medical Officers and two Assistants, who inspect estates throughout the Island. During the year under review 728 estates were inspected. In the course of inspection, defects in the sanitary condition of estates are pointed out and suggestions to remedy and prevent them in future are put forward to the estate owners. Year by year the housing and the sanitary conditions on estates are improving.

Public Health.

In addition to the Inspecting Medical Officers, there were in 1938, 23 Medical Officers of Health and 55 Field Medical Officers assisted by 310 Sanitary Assistants who looked after the sanitary requirements of urban and rural areas. The areas assigned to Medical Officers of Health and Field Medical Officers are so restricted in size and population as to be looked after conveniently by one Medical Officer. In these areas a staff of Sanitary Assistants, Public Health Nurses, and midwives is provided and work is carried out intensively, every type of public health work needed being done. In a few areas the extent of district and population are great, and only Sanitary Assistants, not sufficient to deal with the whole population, are employed. Sanitary work in the limited areas looked after by Sanitary Assistants is done on the same lines as in the intensive areas.

At Colombo, Kandy, Galle, Jaffna, Kalutara Totamune, Panadure Totamune, Matara Gravets, Wellaboda Pattu, and the Colombo Mudaliyar's division, school health work was carried out by nine whole-time School Medical Officers and eight School Health Nurses. Schools in other areas are dealt with by the Medical Officers of Health and Field Medical Officers in their respective districts as part of the general health work.

The Island is guarded against the introduction of dangerous infectious disease from abroad by the health service at each of its ports and by the two Quarantine Camps in Southern India at Mandapam for the overland route and Tataparai for the sea route.

Legislation.

A draft Anti-Mosquito Ordinance and an amending Ordinance of the Lunacy Ordinance, 1873, are in hand.

Infectious Diseases.

Plague.—Nine cases, all within the Colombo Municipality, occurred in Ceylon during the year and only one recovered, the fatality rate being 88·9 per cent., as against 29 cases in 1937 with a fatality rate of 100 per cent.

The cases were, as usual, confined to the Pettah and St. Paul's areas. There was one case in a post-mortem labourer employed at the General Hospital.

The victims were all males between the ages 10-30, comprising 4 Indian Tamils, 2 Indian Moors, 2 Sinhalese, and 1 Borah.

Five cases occurred in the month of May, 2 in February, and 1 each in March and April.

The type of disease among human beings infected in Colombo during the past three years was as follows :—

	1936.		1937.		1938.	
	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.
Bubonic	32	26	20	20	9	8
Septicaemic	7	7	7	7	—	—
Pneumonic	—	—	—	—	—	—
	39	33	27	27	9*	8

Rat Plague.—31,239 rodents were examined at the Municipal Laboratory during the year and 15 or 0·05 per cent. were found infected as against 0·12 per cent. in 1937. One infected rat was sent from the Chalmers Granaries.

Rat Destruction.—The number of rats destroyed within the Colombo Municipality was as follows :—

By "calcid" fumigation	12,578
,, labourers	617
,, trapping gang	106,074
	119,269

Rat-flea Survey.—A rat-flea survey of the Colombo Port Commission premises was conducted during the year and the results obtained were as follows :—

	No. of rats.	No. of fleas.	No. of X Astia	No. of X Cheopis	Ch. Index	Per cent. Ch.
Port Commission premises (excluding lighters)	248	562	313	249	1·00	44·31
Lighters	17	30	17	13	0·77	43·33

F1 Warehouse, Customs, in particular showed a high cheopis infestation: 26 rats were trapped and 132 fleas were collected, of which 15 were astia and 117 cheopis.

*This is the lowest figure on record for any year, since the outbreak of plague in Ceylon in 1914.

Fumigation of Plague Suspect Cargoes.—The following is a statement of the fumigation of plague suspect cargoes carried on at the port of Colombo during the year to prevent the introduction of plague infection into the Island :—

Month.	Rice.	Paddy.	Cotton.	Other Merchandise.	Total.
January	478,540	—	96	3,480	482,116
February	422,576	200	515	6,258	429,549
March	486,660	—	301	19,567	506,528
April	311,565	—	—	9,789	321,354
May	484,795	200	2	4,123	489,120
June	343,503	—	—	4,322	347,825
July	442,738	150	—	1,799	444,687
August	459,229	300	—	1,971	461,500
September	293,791	—	—	928	294,719
October	383,155	—	—	1,342	384,497
November	214,461	—	—	3,674	218,135
December	259,053	50	29	1,156	260,288
Grand Total	4,580,066	900	943	58,409	4,640,318

Note.—The above figures denote the number of bags or bales, &c.

Smallpox.—The Island was free from this disease during the year. There were 2 cases, which recovered in 1937 and 3 cases with 3 deaths in 1936.

Cholera.—There were no cases during the year. There were no cases in 1937 and 49 cases with 44 deaths in 1936.

CHAPTER V.

Housing.

A. *Municipal Towns.*—There are three Municipal towns in Ceylon, viz., Colombo, Kandy, and Galle. Of these, Colombo with a population of about 308,100, is much the largest. New houses in these towns may only be built in accordance with the provisions of the Housing and Town Improvement Ordinance of 1915, which prescribes certain minimum hygienic requirements. But there are numerous insanitary houses built prior to the Ordinance which can only gradually be converted into sanitary buildings as they fall into disrepair. The Colombo Municipal Council began a scheme of housing its own direct labourers in 1923 and a definite yearly programme of providing tenements for them has been followed since that year. In 1931 the Council also embarked on a programme of slum eradication at Kochchikade which, when completed, will rehouse about 2,000 people.

In Kandy, which has a population of about 40,100, the first organized attempt at slum clearance began in 1920 following an outbreak of plague. Seventy-five per cent. of the slums have since been dealt with and replaced by sanitary tenements or houses of a better type. Model tenements have been built by the Council in various parts of the town which now house about 2,500 persons. Forty-two insanitary tenements were closed in 1937 and their inhabitants were for the most part given model dwellings erected by the Council. Lines are also being built for the Council's labourers. A start has also been made in Kandy in providing " back lanes " for the congested areas of the town. These lanes facilitate conservancy and scavenging and also provide more light and air for the houses in their neighbourhood.

In Galle, which has a population of about 38,000, action has been mainly directed towards the improvement and demolition of insanitary and dangerous buildings under the provisions of the Housing and Town

Photo by Werner Conitz. *Courtesy Govt. Tourist Bureau.*

RICKSHAW PULLERS.

Improvement Ordinance, each ward of the town being taken up in turn. Steps taken to prevent overcrowding of houses and tenements were relaxed during 1937 owing to hardships experienced by some of the public by such measures.

B. *Other Towns.*—The other towns of the Island which are under the administration of Urban District Councils or Sanitary Boards are also subject to the Housing and Town Improvement Ordinance. But in most of them only a minority of the existing buildings is in conformity with modern sanitary requirements. A gradual improvement, however, is being effected as the older buildings collapse and have to be rebuilt. Few of the local bodies concerned are in a financial position to embark on schemes of tenement building.

C. *Rural Areas.*—In the rural areas most of the houses are built with wattle and mud walls and roofs thatched with straw or cadjans. Village Committee rules usually prescribe certain elementary sanitary measures, *e.g.*, that a dead body may not be buried within a certain minimum distance of a dwelling-house or that every house must have its walls whitewashed at least once a year. Otherwise housing conditions in the rural areas are free from control.

On the larger tea, rubber, and coconut estates housing accommodation for the labour force is usually provided by the estate proprietors, is inspected periodically by officers of the Medical and Labour Departments, and is generally much superior to that found in the surrounding villages.

CHAPTER VI.

Natural Resources.

General.—The main crops of the Island are coconut, paddy, tea, and rubber. Other crops which are grown to less extents are : cacao, cinnamon, citronella, arecanut, cardamoms, and tobacco.

Chena cultivation, that is, the growing of crops on jungle land newly cleared by burning, is an important feature of peasant agriculture in the sparsely populated areas of the dry-zone.

Animal husbandry was formerly a negligible factor in the agricultural economy of Ceylon, but interest in this branch has now been awakened, and the foundations of stock raising and dairy industries are being assiduously laid.

The extent of production of the several crops may be gauged from the following tables which give the approximate acreages under cultivation and the quantities of produce exported and their value in 1938 :—

Acreages under the Chief Crops (estimated only).

	Acres.		Acres.
Coconuts	1,100,000*	Palmyra	50,000‖
Rice	850,000†	Cacao	34,000‖
Rubber	604,111‡	Citronella	33,000‖
Tea	556,650§	Cinnamon	26,000‖
Chenas, Vegetable, and other crops ..	140,000‖	Tobacco	14,000‖
Arecanuts	69,000‖	Cardamoms	6,000‖

* Based on the results of the partial Census of Production, 1929.
† Based on the statistics collected for 1937-1938.
‡ Based on the Rubber Controller's survey for 1938.
§ Based on the Tea Export Controller's Report for 1937–38.
‖ Based on the results of the Censuses of Production, 1921 and 1924.

Exports of Agricultural Products of the Island in 1938.

				259·7

Tea.

Acreage, &c.—Over 556,600 acres are planted in tea, *Camellia Sinensis*, consisting of 2,362 estates and 69,916 small holdings. It is grown at elevations varying from sea level to 6,000 feet above sea level. The better quality teas are grown at the higher elevations.

The manufactured product consists of the young tender shoots which after plucking undergo the processes of withering, rolling, fermenting, and drying or firing.

Rainfall.—A fairly evenly distributed rainfall of 80 to 120 inches a year is required for tea.

Labour.—The labour force on tea estates consists mostly of immigrant labour from India. An estate requires on an average about 1⅛ labourer per acre.

Research.—A scientific staff is maintained by the industry which is supported by a cess on exports for the purpose of investigating the scientific side of the growth and manufacture of tea.

Yields.—Yields vary considerably according to elevation, cultivation, &c., but may be said to range from 300 to 1,200 lb. made tea per acre.

Factory.—The principal machinery required consists of tea rollers, roll breakers, shifters, &c., and dryers. Suction gas engines are the usual source of power.

Preparation for Export.—Tea is exported in metal lined wooden packages. It is usually blended and packed in packets before it actually reaches the consumer's hands.

Restriciton.—In May, 1933, an Ordinance to control the export of tea was passed by the State Council as a part of a joint scheme for the regulation of the export of tea from the main producing countries. The

Reproduced & Printed by Survey Dept. Ceylon. 9 3 35

DIAGRAM No. 5A

MONTHLY AVERAGE PRICES OF COPRA AND COCONUT OIL (COLOMBO AND LONDON)

Reproduced and Printed by Survey Dept. Ceylon, M. S. 39.

Ordinance is to be operative for a period of five years. For the second year of assessment which ended on March 31, 1935, Ceylon's exportable quota was fixed at 220,082,290 lb. being 87½ per cent. of the total exports of tea from the Island, in 1929. For the year ended March 31, 1936, Ceylon was allowed to export 207,506,160 lb., the same amount was allowed for the year ended March 31, 1937. For the year ended March 31, 1938, Ceylon was allowed to export 220,082,290 lb.

In March, 1938, Ordinance No. 12 of 1938 extending the period of tea restriction for a further period of 5 years from April 1, 1938, was passed by the State Council. For the first year of restriction ending March 31, 1939, Ceylon was allowed to export 232,718,911 lb. representing 92½ per cent. of the Standard Quota of 251,588,012 lb.

Prices.—The average price of total offerings for the year was 70 cents per lb. as against 76 cents per lb. in 1937.

High-, medium-, and low-grown were less than 1937 by 3, 6, and 9 cents, respectively.

The monthly average prices at the local weekly sales during 1938, compare as follows :—

(Per lb.)

	Rs. c.		Rs. c.		Rs. c.
January	0 74	May	0 67	September	0 68
February	0 74	June	0 67	October	0 67
March	0 72	July	0 69	November	0 70
April	0 67	August	0 73	December	0 70

Coupon prices ranged from 36½ cents to 48 cents during the year under review.

The annual average market prices* in certain years were :—1925, 96 cents per lb. ; 1926, 99 cents ; 1927, 94 cents ; 1928, 85 cents ; 1929, 81 cents ; 1930, 75 cents ; 1931, 57 cents ; 1932, 42 cents ; 1933, 54 cents ; 1934, 66 cents ; 1935, 64 cents ; 1936, 67 cents ; 1937, 76 cents ; 1938, 70 cents (see Diagram No. 5).

Rubber.

Acreage, Elevation, and Rainfall.—The acreage under rubber in the Island is 604,111 acres. The rubber tree cultivated in Ceylon (*Hevea brasiliensis*) flourishes at elevations below 2,000 feet and requires a well distributed rainfall of not less than 80 inches per annum. It is cultivated to varying extents throughout the Island, chiefly in the Province of Sabaragamuwa and in the Western, Central, and Southern Provinces.

Latex.—Rubber is the coagulated latex of the rubber tree obtained by tapping the trunk. The latex running from the cut—usually half the circumference—is collected in cups, removed to the factory, treated with acetic or formic acid to cause coagulation, crêped by machinery, and dried or coagulated in sheets and smoked.

Planting.—Most of the rubber planted in Ceylon is seedling rubber grown from mixed seed from unknown parents. In view of the discovery that clonal plantings of plants budded with buds from known high-yielding mother trees give considerably higher yields than seedling plantations this practice has been changed. Budding may take place in the nursery or in the field. In the former case nursery plants one to two years old are budded and subsequently planted in the field as " stumps " : and in the latter case, seeds are planted in the field at stake, two to four per hole, and the seedling plants are subsequently budded in the field.

* According to local weekly sale averages.

Budding of Rubber.—Continued interest was shown by estates in the subject of replanting with budgrafted trees of proved high yielding clones, but although the number of estates undertaking such work is considerable, the area replanted at the end of 1938 was only about 4 per cent. of the total planted area as compared with the 20 per cent. permitted under the Ordinance.

Some of the areas planted with imported clones in the years 1930–31 became tappable during 1938, and although in view of the restriction of output not many estates have commenced to tap such areas commercially a considerable amount of experimental tapping of small groups of trees has been undertaken. The early results show great promise and indicate that the imported clones are likely to give as high yields in Ceylon as in the countries of origin.

Experimental tapping of local clones established from high yielding trees on estates has continued at the Rubber Research Scheme Experiment Station and on estates, and we are now reaching the stage at which the best of such clones can be recommended for commercial planting.

Rejuvenation.—The increase of yield from budded plants has led to a policy, adopted by most progressive estates and companies, of rejuvenation. Old rubber is cut down and the area replanted with budded plants. In almost all replanting, attention is given to soil conservation measures. The trees are planted along the contour, on platforms or in conjunction with some other form of soil conservation works. Cover crops and contour hedges of small woody plants, mostly leguminous, are used extensively.

Cultivation.—Artificial manures are commonly used, especially in replanted areas and are often applied with green manure. Manuring with compost is carried out in some areas.

Restriction.—In May, 1934, an Ordinance to control the export of rubber was passed by the State Council as a part of a joint scheme for the regulation of the export of rubber from the main producing countries. The Ordinance is to be operative for a period of five years. The Ceylon quota of export for any period of control will be the quantity of rubber named as the basic quota for that period or such percentage of that basic quota as shall be declared by His Excellency the Governor by notification in the *Government Gazette.*

The basic quota for the five years is as follows :—

	Tons.		Tons.
1934	77,500	1937	81,000
1935	79,000	1938	82,500
1936	80,000		

An Ordinance to provide for the continuation of the control of the production and export of rubber was passed by the State Council in December, 1938, to be in operation till December, 1943. The basic quota allotted to Ceylon is as follows :—

	Tons.		Tons.
1939	106,000	1942	109,[illegible]00
1940	107,500	1943	110,000
1941	109,000		

Yield.—The yield per acre varies considerably with the soil, age of the trees, rainfall, planting, treatment, &c., but may be said to range from 150 to 700 lb. per acre, 400 to 500 lb. per acre being considered

DIAGRAM No. 6.

AVERAGE WEEKLY COLOMBO PRICES AND

MONTHLY STOCKS OF RUBBER IN UNITED KINGDOM (LONDON AND LIVERPOOL)

FOR THE YEARS 1937 AND 1938

a good all-round yield for an estate in full bearing. It is anticipated that the yields of areas planted with budded rubber will be at least 1,000 lb. per acre when the trees are in full bearing.

Prices.—The average price of total offerings for the year was 38 cents per lb. for crêpe and 36 cents per lb. for sheet.

Crêpe and sheet were less than 1937 by 14 cents and 12 cents, respectively.

The monthly average prices of Ribbed Smoked Sheet (Contract Quality) at the local weekly sales during 1938 compare as follows :—

(Per lb.)

	Rs. c.		Rs. c.		Rs. c.
January	0 33	May	0 27	September	0 40
February	0 34	June	0 30	October	0 43
March	0 32	July	0 37	November	0 41
April	0 28	August	0 40	December	0 41

Coupon prices ranged from 18 cents to 34½ cents during the year under review.

The annual average market prices* in certain years were the following :—1925, Re. 1 ·73 per lb. ; 1926, Re. 1 ·21 ; 1927, 95 cents ; 1928, 55 cents ; 1929, 52 cents ; 1930, 27 cents ; 1931, 14 cents ; 1932, 11 cents ; 1933, 15 cents ; 1934, 31 cents ; 1935, 30 cents ; 1936, 41 cents ; 1937, 50 cents ; 1938, 37 cents (see Diagram No. 5).

Labour.—The labour engaged is composed of Sinhalese and immigrant Indian Tamils. The usual requirement of labour is one labourer to 3 acres of rubber.

Research.—A scientific staff is maintained by the industry and is supported by a cess on exports for the purpose of investigating the scientific side of the cultivation and preparation of rubber. Provision for this research work was made by Ordinance No. 10 of 1930.

Coconut.

Acreage, Area, &c.—It is estimated that approximately 1,100,000 acres are planted with coconuts. Along the coast of the Western and Southern Provinces planting has been done very closely and no systematic cultivation is carried out. Here the main product is toddy which is supplied to arrack distilleries ; at the same time the manufacture of coir string and rope is an important subsidiary industry, especially in the hands of women. Elsewhere the coconut is cultivated mainly for the production of copra, and the extraction of oil therefrom, as well as the manufacture of desiccated coconut. Cultivation is confined mainly to elevations below 1,500 feet and a well distributed rainfall of 50 to 90 inches is required. The greater part of the acreage lies in the North-Western, Western, and Southern Provinces.

Cultivation.—Cattle manure and artificial manures are used. Young coconuts systematically cultivated and manured come into bearing much earlier than coconuts which are not so treated.

Labour.—The quantity of labour required for a coconut estate is generally worked out at one labourer for 10 acres.

Research.—The Coconut Research Scheme, which was established by Ordinance No. 29 of 1928, has its headquarters at Bandirippuwa Estate Lunuwila, with a sub-station at Ratmalagara Estate, Madampe. It is

* Averages for top grades only (Ribbed Smoked Sheet and Contract Crepe) at local weekly sales.

3—J. N. 83918 (5/39)

supported by a grant and a cess on the exports. The Senior Scientific Staff consists of the Technological Chemist who is at the same time Director of Research, the Geneticist and the Soil Chemist. On the junior staff are three technical assistants, four field assistants, the superintendent and conductor of the estate, and three clerks. Scientific research is carried out on the breeding and improvement of the coconut palm, manuring and cultivation, and the technology of coconut products. There are well equipped laboratories and a useful library and reading room at Bandirippuwa Estate. The third Wednesday in each month is set aside as Visitors' Day. Coconut planters and others interested in the industry are specially invited to make use of the library and reading room, which are open on week days from 9 A.M. to 4 P.M. and on Saturdays from 9 A.M. to 12 noon.

Leaflets and other publications on various aspects of the coconut industry are issued to *bona fide* inquirers who register their names on the Scheme's mailing list.

The nut.—The principal product, from a commercial point of view, is the nut. The yield per palm on a cultivated estate is about 40 nuts per annum. The average yield is probably under 30 nuts per palm, though with cultivation in good districts up to and over 80 may be secured. The number of palms to the acre may vary from 50 to 90, the average being about 70. The palms come into bearing in about six years with intensive cultivation, but more usually take up to ten years. The nuts are generally picked six times a year. They are made into copra upon the estate which produces them, but some small holders sell their nuts to manufacturers. The price rose owing to the increased demand for the manufactured products from Rs. 74 per 1,000 in 1913 to the maximum of Rs. 115 per 1,000 in 1920.

Prices.—There was remarkably little price fluctuation during the year. Prices declined during the first quarter from the opening figure of Rs. 35 a 1,000 to Rs. 27 at the end of March. From then until December very little movement was seen, and the average monthly quotations which follow are an accurate guide. At the end of December the market steadied slightly, closing at Rs. 28 per 1,000, prices being for equal proportions of husked nuts, large, middles and smalls, delivered at buyers' stores.

Average of the monthly quotations recorded by the Ceylon Chamber of Commerce for 1938 :—

(Per 1,000 nuts L.M.S.)

	Rs. c.		Rs. c.		Rs. c.
January	.. 33 57	May ..	.. 25 0	September	.. 24 38
February	.. 29 0	June ..	.. 25 50	October	.. 25 10
March	.. 27 50	July ..	.. 25 0	November	.. 26 75
April ..	.. 25 88	August	.. 24 50	December	.. 27 0

The annual average market prices in recent years were the following :— 1930, Rs. 46·58 per 1,000 nuts L.M.S. ; 1931, Rs. 37·12 ; 1932, Rs. 44·60 ; 1933, Rs. 29·36 ; 1934, Rs. 19·42 ; 1935, Rs. 35·71 ; 1936, 43·03 ; 1937, Rs. 44·83 ; 1938, Rs. 26·54.

Copra.—The most important manufactured product is copra. This is the dried kernel of the nut, and is used for the manufacture of coconut oil, which, again, is utilized for the production of margarine, soap, and other products. Poonac, a largely used cattle food, is the by-product in the manufacture of coconut oil from copra.

ing company, inc.

andronicus publishing

The number of nuts required to manufacture a candy (560 lb.) of copra varies from 900 to 1,500.

The value of the exports of copra is shown in Diagram No. 9.

Prices.—The market opened the year at Rs. 34·25 per candy but fell to Rs. 31·25 by the end of January. Thereafter prices fluctuated between Rs. 27 and Rs. 25·75 until December, when the market advanced to Rs. 29·50 and closed the year at Rs. 29·25.

Average of the monthly quotations recorded by the Ceylon Chamber of Commerce for 1938 :—

(Estate No. 1 per candy of 5 cwt.)

	Rs. c.		Rs. c.		Rs. c.
January	.. 32 54	May ..	.. 27 66	September	.. 25 75

March	.. 28 10	July ..	.. 27 15	November	.. 27 35
April ..	.. 26 41	August	.. 26 57	December	.. 28 97

The annual average market prices* in certain years were :—1925, Rs. 80·36 per candy (560 lb.) ; 1926, Rs. 79·40 ; 1927, Rs. 76·88 ; 1928, Rs. 76·22 ; 1929, Rs. 64·47 ; 1930, Rs. 52·36 ; 1931, Rs. 35·06 ; 1932, Rs. 42·21 ; 1933, Rs. 29·75 ; 1934, Rs. 21·98 ; 1935, Rs. 38·15 ; 1936, Rs. 48·01 ; 1937, Rs. 47·23 ; 1938, Rs. 27·74. (See Diagram No. 5.)

Coconut Oil.—Although a large quantity of copra is exported for the extraction of oil by the importers, a quantity of coconut oil is prepared in Ceylon. The traditional method of extraction consists in grinding the copra in a "chekku" consisting of a large wooden pestle, which is revolved by bullock power in a kind of stone mortar.

The value of the exports of coconut oil is shown in Diagram No. 9.

Prices.—Opening at Rs. 225 in January prices fell gradually until October when the value declined to Rs. 170 since when it recovered slightly to end the year at Rs. 180.

The monthly average prices recorded by the Ceylon Chamber of Commerce for 1938, compare as follows :—

(White Oil per ton F.O.B.)

	Rs. c.		Rs. c.		Rs. c.
January	.. 222 50	May ..	.. 188 44	September	.. 172 50

(See Diagram No. 5.)

Information regarding the manufacture of alcohol, &c., is shown under " Toddy and Arrack ", page 35.

Coir, &c.—An important but somewhat unorganized industry, also dependent upon the coconut tree, is the manufacture of coir, which consists of the stout fibres forming the husk of the nut. These fibres are separated by rotting the husks in water, or by special machinery. The fibres are then graded and used for making brushes, yarn, mats, rope, &c., according to their quality. In many parts of Ceylon the coir fibres are separated by village labour, chiefly women, and sold by them to exporting firms.

The value of the exports of coir is shown in Diagram No. 9.

Prices.—The market opened in January at Rs. 3·25 per cwt. for good quality 2-tie, but, owing to the smaller demand from Japan, had declined to Rs. 2·70 per cwt. by the end of the month, at which price it remained steady until the end of May, when a further decline set in, to Rs. 2·35 per cwt. This was maintained until the middle of September, when the market weakened further to Rs. 2·15 per cwt., but the decline was short-lived as the market was back to Rs. 2·35 within a month and stood at this price at the end of the year.

iagram No. 5A (p. 23) compares Colombo and London prices of copra coconut oil for each month of this year.

he London prices C.I.F. are taken from Messrs. Fischel & Co.'s Weekly orts for copra and from Messrs. H. M. F. Faure & Co.'s Annual Reports coconut oil.

Cacao.

ommercial cacao is produced from the seeds of the plant *Theobroma o*. The variety now grown in Ceylon is the *Forastero*.

levation and Rainfall, &c.,—The cultivation of cacao is restricted to urably situated valleys at an elevation between 500 to 2,000 feet ch receive a well regulated rainfall of 60 to 80 inches and are protected n high winds. Plantations lie almost entirely in the Kandy and ale Districts of the Central Province. Of an approximate acreage of 00 acres under cacao in the Island 55 per cent. is in the former district 33 per cent. in the latter.

abour.—The labour required for a cacao estate works out at about labourer for 2 acres. Tamils generally form the bulk of the labour e, but Sinhalese are also employed for lopping, &c.

lanting.—As the young plant requires to be carefully shaded, shade s must be planted at the same time between the rows about the same ance apart as the cacao.

rops.—Cacao commences to bear fruit about the fifth year, two os a year being then gathered. The general average yield is about o 4 cwt. per acre.

icking.—The flowers and fruit of the tree grow in a characteristic nner direct upon the trunk and branches of the trees. The fruit llipsoidal and of considerable size, and the beans are covered with o or mucilage. Ripening is generally indicated by a change of colour he outside of the pods. The fruit on the stems and main branches cked by means of an ordinary pruning knife, while that on the higher s of the tree is dealt with by cacao hooks. The picking gang goes nd as often as necessary, the period generally being between a fortnight three weeks. The pods are cut down by men or boys, who are wed by women, who gather the pods and heap them together. The ts are opened the same day, and the beans carted or carried to the nenting shed. One labourer will pick 1 to 1½ bushels of wet beans day. This is equal to about 37 lb. of the cured product.

ermentation.—At the fermenting shed the beans, covered with ilage, are heaped into boxes or vats for fermentation. This process ccompanied by rise of temperature and by decomposition of the pulp ounding the beans. During the fermentation the pulp becomes e liquid and gradually flows away, the bottom of the fermenting es being perforated and raised off the ground to admit of this. The od of fermentation in Ceylon is about 36 hours. After 12 hours the ns are given a light washing and turned over into another box. They again given a heavier washing at the end of the fermenting period of hours, when they are carried or carted to the barbecue or curing se.

uring.—The best method of curing is the gradual drying of the beans he sun or barbecues covered with coir matting. By this method the quality is obtained. The period varies from five to seven days,

according to the temperature. Most of the picking has, however, to be done during the wet season, and a greater part of the crop is cured by artificial means. The most popular curing house is a two- or three-floor building, the floors being constructed of strips of wood covered over with coir matting, on which the freshly-fermented beans are spread. The building is heated with hot air conducted by pipes placed under each floor, the hot air being obtained by means of a fan, which drives the air through the heating apparatus and then through the pipes. The temperature in the building during the curing process is kept between 110 and 120 degrees Fahrenheit.

Packing.—Cacao after grading is packed in bags (112 lb. to a bag) when it is ready for export. Most of the cacao from Ceylon is shipped, in this form.

Prices.—The average price for the year was Rs. 19·33 per cwt. as against Rs. 33·65 per cwt. in 1937.

Average of the monthly quotations recorded by the Ceylon Chamber of Commerce for 1938 :—

(Estate No. 1 per cwt.)

	Rs. c.		Rs. c.		Rs. c.
January .	.. 23 38	May ..	.. 16 56	September	.. 21 6

March ..	.. 18 19	July ..	.. 21 5	November	.. 17 75
April ..	.. 16 81	August	.. 21 37	December	.. 17 25

The annual average market prices* in certain years were :—1925, Rs. 33·17 per cwt. ; 1926, Rs. 30·41 ; 1927, Rs. 52·22 ; 1928, Rs. 58·89 ; 1929, Rs. 53·46 ; 1930, Rs. 37·51 ; 1931, Rs. 29·71 ; 1932, Rs. 27·71 ; 1933, Rs. 25·09 ; 1934, Rs. 22·99 ; 1935, Rs. 18·37 ; 1936, Rs. 33·72 ; 1937, Rs. 33·65 ; 1938, Rs. 19·33.

The value of the exports of cacao is shown in Diagram No. 9.

Cinnamon.

Cinnamon, once the main export, still occupies a place—though a minor one—in the trade of the Island. The approximate total acreage is 26,000 acres, of which 58 per cent. is in the Southern Province (Galle District 40 per cent.) and 41 per cent. in the Western Province (Negombo area 30 per cent.).

The industry is entirely in the hands of Ceylonese. The number of large properties of 100 acres and over in extent is limited and these receive systematic attention. The majority of plantations are small areas of 10 to 25 acres in extent.

The Tree.—The cinnamon tree may grow to the height of 20 to 30 feet, and the trunk may be upwards of 3 feet in circumference. The trees cultivated to produce the cinnamon of commerce are coppiced, and long willowy shoots are produced, growing to a height of about 10 feet and to the size of a fair-sized walking stick. The shoots are cut and the bark is peeled off, and rolled into quills, which constitute the cinnamon of commerce.

Prices.—The average price for the year was 40 cents per lb. for quills and Rs. 35·16 per candy for chips.

* The average prices for 1927 to 1938 are for top grades only. Averages for other years represent the lowest and highest overall weekly quotations received for all grades.

Average of the monthly quotations recorded by the Ceylon Chamber of Commerce for 1938 :—

	Quills (Fine 0-0000 per lb. Rs. c.	Chips* (per candy of 5 cwt.) Rs. c.		Quills (Fine 0-0000 per lb.) Rs. c.	Chips* per candy of 5 cwt.) Rs. c.		Quills (Fine 0-0000 per lb.) Rs. c.	Chips* per) candy of 5 cwt.) Rs. c.

April	0 47	34 69	August	0 35	31 81	December	0 34	33 13

The annual average market prices† of quills in certain years were :—1925, 88 cents per lb. ; 1926, Re. 1·14 ; 1927, Re. 1·35 ; 1928, Re. 1·29 ; 1929, Re. 1·15 ; 1930, 59 cents ; 1931, 37 cents ; 1932, 28 cents ; 1933, 25 cents ; 1934, 29 cents ; 1935, 35 cents ; 1936, 37 cents ; 1937, 43 cents ; 1938, 40 cents ; of chips : 1925, Rs. 84·54 per candy ; 1926, Rs. 93·79 ; 1927, Rs. 102·77 ; 1928, Rs. 105·72 ; 1929, Rs. 96·86 ; 1930, Rs. 56·41 ; 1931, Rs. 38·92 ; 1932, Rs. 26·40 ; 1933, Rs. 20·64 ; 1934, Rs. 30·64 ; 1935, Rs. 27·69 ; 1936, Rs. 33·75 ; 1937, Rs. 47·17 ; 1938, Rs. 35·16.

An acre will yield about 120 lb. quills.

Citronella Oil.

Citronella oil grass is a large coarse grass growing 3 to 4 feet high, cultivated in Ceylon (and of late years in Java) for its essential oil, which is obtained from the leaves by distillation. It flourishes up to an elevation of 2,000 feet, but its cultivation is confined entirely to the Southern Province where the acreage under this crop is estimated to be 33,000 acres, of which 62 per cent. is in the Matara District and the remaining 38 per cent. in the Hambantota District. Cultivation is in the hands of the Ceylonese. The grass is readily propagated by division (seed being rarely produced), and may be planted about 2 by 3 feet apart in rows. Two cuttings a year may be obtained, and about 40 lb. of marketable oil per acre is an estimated annual yield. The oil is of a strong aromatic odour ; it is exported for use in scenting soaps, perfumery, &c., and is also a preventive against the bites of mosquitoes and leeches.

Prices.—Compared with 1937 the market throughout the year was remarkably steady.

The average price for the year was 73 cents per lb. as against 87 cents per lb. in the previous year.

Average of the monthly quotations recorded by the Ceylon Chamber of Commerce for 1938 :—

(Per lb.)

† The average prices for 1927 to 1938 are for top grades only. Averages for other years represent the lowest and highest overall weekly quotations received for all grades.

Tobacco.

Acreage and Localities.—The estimated acreage under this crop in the Island is 14,000 acres, of which a little over half is found in the Jaffna District of the Northern Province, where great care is given to cultivation. The methods adopted are peculiar to this area and the manufacture of the leaf gives rise to the most important industry in the district. Another variety of leaf is grown in the Central Province which claims about 21 per cent. of the total acreage under the crop. Dumbara in the Kandy District is a particularly favoured area, while in the Matale District the crop is of some importance to the peasant, besides there being a small manufacture of cigars and pipe tobacco from the local leaf as in the case in Dumbara. Tobacco is also grown to the extent of about 1,500 acres in the Kurunegala District where the method of manufacture to produce a chewing tobacco differs from that adopted in Jaffna. Elsewhere cultivation is carried out in the North-Central and Eastern Provinces to less extents.

Dumbara Tobacco.—A high grade of Ceylon Tobacco is grown in the Kandy District.

The leaves of the Dumbara tobacco burn with a good white ash, and are manufactured in the Island into cigars, which command a ready sale, and would be in greater demand if they were more uniform in quality. A large portion of the Central Province crop is sold to local manufacturers of cigars for use as wrappers for the Jaffna types. The leaves are smaller of lighter colour.

Jaffna Tobacco.—The Jaffna types consist of two kinds. These are locally known as the smoking and chewing kinds. Both are large-leaved, coarse tobaccos, the chewing type being of more vigorous and coarse growth than the smoking type.

Cardamoms.

Uses.—Cardamoms are of commercial value on account of the spice obtained from them, which is well known to cooks and confectioners, and is used in pharmacopoeia as a deadener of tastes and a medicine.

Habitat, &c.—The commercial value of the plant lies in the fruit, which is borne on racemes rising from the ground. The plant itself—*Elettaris Cardamomum*—grows in stools or clumps under the shade of forest trees at elevations between 2,800 and 4,000 feet, with a rainfall of 115 to 150 inches a year.

Manufacture.—The fruit is collected and is manufactured into either (1) bleached or (2) green dried.

Acreage.—The total acreage under cardamoms is estimated to be 6,000 acres, of which 82 per cent. is confined to the Central Province—approximately 2,500 acres in the Kandy District, 1,500 acres in the Nuwara Eliya District, and 1,000 acres in the Matale District. About 1,000 acres are found in the Kegalla and Ratnapura Districts (Province of Sabaragamuwa). The bulk of the plantations is in the hands of European owners, but the number of small gardens of a few acres in size in the hands of peasants is not inconsiderable.

Prices.—The average price obtained for cardamoms during 1938 was Re. 1·20 as against Rs. 2·10 in the preceding year.

February ..	1	31	June	1	32	October ..	1	2
March	1	21	July ..	1	25	November ..	1	3
April	1	34	August ..	1	9	December ..	1	11

The annual average market prices* in certain years were :—1925, Rs. 3·42 per lb. ; 1926, Rs. 2·44 ; 1927, Rs. 2·54 ; 1928, Rs. 2·50 ; 1929, Rs. 2·22 ; 1930, Re. 1·69 ; 1931, Re. 1·67 ; 1932, Re. 1·33 ; 1933, 95 cents ; 1934, 91 cents ; 1935, Re. 1·00 ; 1936, Re. 1·60 ; 1937, Rs. 2·10 ; 1938, Re. 1·20.

Arecanuts.†

Conditions.—The arecanut palm is grown in all village gardens in the wetter districts of the Island. It produces heavy crops of fruits, and provides straight stems, which are used for the erection of temporary structures. Pure cultivations of the palm similar to those to be found in Southern India are rarely seen in Ceylon, although in the Kegalla Districts there are some fairly extensive pure plantations. The area under arecanuts is about 69,000 acres.

The Fruit.—The fruits of the arecanut palm are harvested when ripe, and are sold in their unhusked state in all the bazaars and markets of the Island.

Arecanuts are generally exported to British and foreign India and the Maldive Islands, but practically the whole of exports in 1938 went into British India.

Foodstuffs.

Paddy or Rice.

If Hill paddy (*elvi*) is excluded, it may be said that the cultivation of paddy in Ceylon is based upon a plentiful supply of water. Not only are the plants dependent upon a good supply in all stages up to the ripening period, but the processes of cultivation in all parts of Ceylon, except some of the most northerly, are dependent upon it.

Rain-water Cultivation.—Cultivation without the help of irrigation is carried on, not only in dry districts like Jaffna, but also in wetter parts like the Kandy District. The success of the crop is entirely dependent upon a sufficient and reasonable rainfall, and upon the soil being capable of retaining the water for a fairly long period in order to tide over the rainless intervals. Should the rains fail after the paddy has been sown, the crop will perish, and then the cultivator must resow his field with a paddy which can mature in the remainder of the season, or lose the season entirely. Similarly, if the rains are late, the earlier maturing varieties of paddy must be sown.

Irrigation.—When paddy is grown under irrigation, the water may be supplied by springs, streams (*elas*), wells, or reservoirs ("tanks"). Cultivation under streams may be seen in the Central and Uva Provinces and under tanks in the drier Eastern, Northern, and North-Central Provinces.

---

* The average prices for 1927 to 1938 are for top grades only. Averages for other years represent the lowest and highest overall weekly quotations received for all grades.

† Although in point of value of exports arecanuts rank between rubber and cacao, this sub-section is inserted here, as the cultivation is not organized and insufficient details are available regarding it.

Asweddumization.—In all cases where a system of irrigation is employed the land must be " asweddumized ", or prepared for paddy. Should the paddy area not be level, it is necessary to terrace it. This terracing is brought to a high level of perfection in the hilly districts. Distribution channels convey the irrigation water to the upper plots, and drains carry off the surplus water.

Seasons.—There are two paddy-growing seasons, both of which are made use of for the cultivation of the same tract of fields when sufficient labour and water are available. The *maha* crop is sown from the end of August to the middle of October, according to the district. The harvest from this crop is reaped in February or March. The *yala* crop season commences with sowing in March-April, the harvest being reaped in July to September. The corresponding Tamil seasons are called *munmari* and *pinmari* or *kalapokam* and *sirupokam*. Generally speaking, six and three months are required for the respective *maha* and *yala* crops. In some districts sowings take place between *maha* and *yala* seasons for a *meda* or *iddi* (Tamil) crop.

Acreage.—The area under wet land paddy in Ceylon is estimated to be 850,000 acres yielding approximately 17 million bushels of paddy (grain in husk) per annum. The greatest proportion of the acreage lies in the North-Western Province. But large extents are found in all the provinces.

Other Food Crops.

Chenas.—Many other food grains are grown in the Island. Except in the Northern Province, these are generally grown in " chenas "—areas of land covered with secondary forest or other vegetation, which are cleared and burned—which are either private or leased or granted by the Crown. The principal grains grown are kurakkan (*Eleusine coracana*), maize, Italian millet, *Paspalum* millet, and *Panicum* millet. Pulses are also grown in the chenas, the principal crops being green gram, horse gram, and black gram. Gingelly (*Sesamum indicum*) forms an important chena crop particularly in the Jaffna, Anuradhapura, and Kurunegala Districts. Hitherto in addition to the utilization locally of the crop produced in the Island, gingelly seed oil, and poonac had been imported from India to the value of Rs. 2 to 3 millions.

Edible tubers grow in abundance. These are known in the Island as yams, and include dioscorea yams, tannia yams, sweet potatoes, and manioc. Sweet potatoes are abundant in the Southern Province, while manioc or cassava has spread rapidly in all districts in recent years, and constitutes a general food. The preparation of tapioca might be possible in some districts if a good supply of pure water were available.

Plantains (bananas) of various types are largely cultivated, and are to be found in all markets. The largest area of plantains is to be found between Polgahawala and Rambukkana, but in recent years the bunchy-top disease has appeared and caused considerable damage. This disease now appears to be less virulent, and areas which suffered severely some years ago are now giving good crops of fruit.

Jak and breadfruit are important foodstuffs, while " jaggery " is made from coconut, palmyra, or kitul palms.

Vegetables and curry plants are generally cultivated throughout the Island, and markets are well stocked. Dried chillies are prepared in the drier districts, while onions are largely grown in some localities.

Pumpkins, gourds of various kinds, and cucumbers are largely grown and find a ready sale in the various towns and village markets of the country. In the hills European vegetables thrive and are largely grown for transport by rail to the principal centres of population and to the shipping in Colombo Harbour.

Miscellaneous.

Cotton.—Considerable success has been achieved in an effort to establish the cultivation of cotton as a peasant industry, chiefly in the Hambantota District of the Southern Province and in the Matale District of the Central Province. A cotton purchase scheme has been established whereby cultivators are given cotton seed for planting and the crop grown by them is purchased by Government on behalf of the Spinning and Weaving Mills, Colombo.

The following table shows the areas under cotton in the different agricultural divisions during the last nine years :—

Years.	Southern Division Acres.	Central Division Acres.	South-Western Division Acres.	Northern Division Acres.	Total Acres.
1929–30	2,297	—	—	—	2,297
1930–31	1,444	12	112	—	1,568
1931–32	261	29	18	—	308
1932–33	536	78	80	—	694
1933–34	300	87	2½	—	389½
1934–35	450	173	60	—	683
1935–36	756	379	80	—	1,215
1936–37	1,200	466	60	—	1,726
1937–38	850	446	250	200*	1,746

*Approximate.

Kapok.—Kapok is not grown as a pure crop, but is largely planted along the boundaries of fields and settlements and in some instances interspersed among other permanent crops. A regular trade is being conducted by petty dealers.

Kitul.—The fibre of the Borassus palm has always found a ready market, and in the past few years it has been used locally for the manufacture of brooms and brushes. The tree is not systematically cultivated, and is only indiscriminately distributed throughout the wetter districts of the mid- and low-country.

Papain.—This is the dried extract obtained from the milk of the papaya fruit for which there has been a steady market in the past. The crop was largely cultivated in the Kegalla, Kandy, and Kurunegala Districts, and the development of a profitable peasant industry was indicated.

Pepper.—The pepper vine is widely distributed throughout the wet low-country as well as in the Kandy and Matale Districts of the mid-country though systematic pure plantations are not established. It is grown against shade trees in certain tea and cacao estates, and is in evidence in practically every village garden.

Toddy and Arrack.

The production of toddy and arrack forms two important industries dependent on the coconut palm. For the formation of coconuts a large quantity of saccharine juice is supplied by the tree to the flowering stalks

or spadices, which are enclosed in spathes. If the spadix is " tapped " before the nuts mature, and a pot attached to it, a quantity of the juice, varying from 6 to about 12 drams per day, can be collected in the pot. A dram is equivalent to 1/48 of an imperial gallon. If lime is not used to prevent fermentation, the action of yeasts, which are present in the air or in the pot, will convert the sugar in the juice into alcohol, and the liquid will be converted into " toddy ", with an alcoholic strength of about 4 to 8 per cent. Toddy is also obtained similarly from the palmyra and kitul palms. It is sold in taverns under Government licence at rates varying from 48 cents to Re. 1·20 per gallon. A considerable industry depends upon the sale of toddy, which attracts may of the smaller Ceylonese and Malayalee capitalists. The cost of production of toddy (exclusive of transport and retailing costs) may be estimated at about 23 cents per gallon, and considerable profits are made when the sales are active.

The toddy consumption in 1937–38 (the rent-year being from October 1 to September 30) was 4,209,436 gallons, compared with 4,189,074 gallons in 1936–37, the average consumption per head of population being 0·79 gallons for both years. The figures for 1936–37 consumption do not include the toddy consumed in Jaffna District from January 1 to September 30, 1937, when all toddy taverns in that District were abolished and replaced by the tree tax system. Under this system, any person may tap any number of trees up to a maximum of 20 on payment of a tax of Rs. 2·50 per male palmyra and of Rs. 10 per female palmyra or coconut tree. The toddy is sold at the tree foot by each licensee ; figures for consumption under the tree tax system are thus not available. The actual toddy revenue (inclusive of tree tax) collected in the two financial years was Rs. 2,598,533 in 1936–37 and Rs. 2,705,713 in 1937–38, the revenue per head being 49 and 51 cents respectively. In 1938–39 the rents of 167 toddy taverns were sold for Rs. 2,298,485, a slight increase on the amount realized from the rent sale of the 161 sanctioned taverns for the financial year 1937–38.

By the distillation of coconut toddy, the local spirit known as " arrack " is produced, and this is sold, like toddy, in taverns licensed by Government. The whole of the distilling and sale of arrack is in the hands of Ceylonese capitalists. Distillation of arrack prior to 1923 was carried on in about 250 small pot-stills of the most primitive variety ; it is now concentrated in eight large modern distilleries situated in the Kalutara District, the outturn capacity of each being not less than 60,000 gallons at 27° u.p. per annum. Three of the distillers have installed " Barbet's " patent stills for continuous distillation, each capable of producing 1,000 gallons of arrack per day. All distillery operations are carried on under the close supervision of the Excise Department. The arrack made at these distilleries is far purer and almost entirely free from copper than any arrack previously distilled from coconut toddy in Ceylon. Insistence on better straining of the toddy wash, and on greater cleanliness generally, has resulted in a steady improvement of the quality of arrack. An Extra Special quality of pure pot-still arrack, matured in wood for 5 years, was also sold during April and May, 1937, as an experiment ; it was very well received. These new private distilleries were started in April, 1924. They supply arrack to Government at a fixed price under what is known as the " Contract Supply " system.

About 8 gallons of toddy are required to produce a gallon of arrack at proof strength, *i.e.*, the outturn in arrack (proof gallons) of a distillery is

about 12·0 per cent. of the toddy distilled. The distiller's cost of production is about Re. 1·30 to Re. 1·35 per gallon at 27° under proof, according to variations in the prices he has to pay for his toddy supplied on contract. The distillers sell their arrack to Government at Re. 1·80 per gallon at 27° under proof. Government stores and matures the spirit in wood, and carries on reducing, blending, and bottling operations.

Retailing is done by renters, who are usually those who offer the highest price for this privilege. In addition to paying this price irrespective of the volume of their sales, they pay the following charges for every gallon of arrack at 27° u.p. they obtain from a Government Warehouse to cover Government expenditure on purchasing, warehousing, and bottling arrack :—

Duty on bulk arrack at Rs. 8·50 per gallon and on arrack in bottles Rs. 7·50 per gallon ;

Cost price Rs. 3 per gallon in all districts except Trincomalee, Batticaloa, Badulla, Jaffna, and Vavuniya ;

Cost price Rs. 3·50 per gallon of bulk arrack at Trincomalee, Batticaloa, Badulla, Jaffna, and Vavuniya ;

Extra charges per gallon on the Ordinary quality of bottled arrack Re. 1, on the Special quality of bottled arrack Rs. 2, and on the Extra Special quality of bottled arrack Rs. 3·50 per gallon.

The quantity of arrack distilled during the last three years is as follows :—

	Gallons (proof strength).		Gallons (proof strength).		Gallons (proof strength).
1936 ..	.. 531,461	1937 ..	.. 387,911	1938 ..	.. 300,753

The corresponding percentage of outturn for the three years was 12·0, 11·89 and 12·06 respectively.

The consumption of arrack rose from 388,330 gallons in 1936–37 to 400,687 gallons in 1937–38, an increase of about 3·2 per cent. which is mainly accounted for by improved economic conditions.

The number of arrack taverns exclusive of canteens was 156 in 1936–37 as well as in 1937–38. The estimated net revenue, after deducting expenses of the distribution and storage system, was Rs. 4,480,000 in 1936–37, and Rs. 4,740,895 in 1937–38, which are equivalent to Re. 0·84 and Re. 0·89 respectively per head of population. The arrack consumption per head of population was 0·07 and 0·08 gallons in 1936–37 and 1937–38 respectively. The arrack revenue (net) per gallon was Rs. 11·54 in 1936–37 and Rs. 11·83 in 1937–38.

Vinegar Manufacture.

Toddy vinegar is obtained from the aceticization of fermented toddy, which takes place naturally after about 36 hours.

In 1924 special licences were first issued to vinegar manufacturers only in the Western and Southern Provinces, with a view to encouraging the manufacture of toddy vinegar as a local industry. Rules were passed in 1926 to control vinegar stores. Thirteen such licences were in force during 1937–38 (a decrease of 2 as against 1936–37) in addition to two licences issued to toddy tavern renters to manufacture vinegar from unsold toddy.

Excise Offences.

The following is a statement of Excise detections in the five years 1934, 1935, 1936, 1937, and 1938 :—

Year.	Foreign Liquor.	Arrack.	Toddy.	Opium and Ganja.	Others.	Total.
1934	10	260	6,471	736	564	8,041
1935	2	295	5,565	818	1,062	7,742
1936	2	348	7,235	796	757	9,138
1937	1	462	8,162	984	344	9,953
1938	8	593	9,730	924	704	11,959

The most remarkable increases occur under illicit distillation and under tapping, possession, sale and transport of toddy.

FISHERIES.

The fisheries of Ceylon can be subdivided into off shore, shore, lagoon, and fresh water fishing and the aquatic resources range from corals, molluscs and crustacea, to fishes, aquatic reptiles and aquatic mammals. The industry furnishes the country with about 32 thousand tons of fish or more annually, but this is by no means the entire quantity of fish products consumed.

The economic interests of the industry are not restricted to fishes alone, for there are three molluscs of exceptional importance to Ceylon. One is the pearl oyster which occupies rocky " paars " in the Gulf of Mannar off the west coast from Puttalam to Adams Bridge. These banks are under Government control and the fishery a Government monopoly. The last fishery was in 1925, the gross receipts being Rs. 517,507. Another bivalve is the window pane oyster, which lives partly embedded in the mud of Tamblegam lagoon near Trincomalee on the east coast. This fishery is leased by Government for three-year periods. The amount obtained from the last lease was Rs. 19,825 and the total number of oysters fished was 3,773,329. The third mollusc of importance is the chank which is fished in the shallow area of Palk Strait and the Gulf of Mannar. The royalty levied on the export of chanks for 1938 was Rs. 8,403·41. Money is also obtained by local bodies and by Government Agents from the sale of rentals for fish stalls and markets, sites for fish kraals, licences, &c.

The question of developing the fishing industry has taken the foremost place in the investigations conducted by the Department of Fisheries, although the lack of staff has proved a hindrance. Much of the preliminary work necessary prior to commencing large scale operations has still to be done, and the greater number of food fishes in Ceylon waters are but little known, their bionomics even less so. Progress has been made in supplying this initial need, and accounts of several important families, fresh water as well as marine, have been published, while others are under preparation.

Preliminary investigations into local fish curing have also been undertaken and accounts of the curing methods published. As a result of the knowledge derived from this work it is now proposed to commence pisciculture and smoke curing. With this object in view a series of seven large fish ponds have been established near Colombo. On the same site is erected a smokehouse for research into methods of smoking suitable to local requirements. Another advance in this direction is the decision to establish two fish curing yards on the East and West coasts, where

Copyright Photograph. *Chitrafoto.*

KUMARAMAHAVIHARE.

fish curers will be supplied with high quality salt at the lowest possible price. The Marine Biologist is to advise the men in up to date curing methods and the by-products of the curing processes will be utilized as manure.

With a view to experimenting on a type of vessel and gear suitable to local fishermen the Fisheries Department has built a coble supplied with a sail and auxiliary motor. This vessel is at the service of fishermen, whose experiments and criticism should prove valuable in constructing a cheap type of vessel suitable for these waters.

Two extensive fishing banks were surveyed by the Department some years ago, viz., Pedro bank off the north-east coast with an area of over 1,000 square miles and Wage bank off Cape Comorin with an area of about 4,000 square miles. These continue to be unexploited, as the fishing vessels of Ceylon are small. The Portuguese tombu of 1618 enumerates large dhoneys among the fishing vessels of that period, but these appear to have been mainly employed for staying at sea, and salting their catch which was later taken inland for sale. The spread of the railway and lorry now enables speedy transport of fresh fish inland and consequently the curing industry has declined, while the slow moving dhoney has disappeared from the fishing grounds, now worked solely by outrigger canoes and catamarans of limited capacity and with little scope for further development.

Three grades of men control the industry. The first is the fisherman, who is generally employed by some wealthy capitalist who deals with contractors. The fisherman is subjected to from three to seven levies in cash and in kind from various quarters and it is debatable whether the help he recieves in return is by any means adequate recompense. In the 16th century under Sinhalese rule the men were liable to a revenue tax which was increased by the Portuguese and Dutch who also forced the men to labour as shipwrights and to load and unload ships, while restrictions on salt added to their hardships and commenced the decline of a once active industry.

A grant of Rs. 87,500 from the Colonial Development Fund for erecting a Research Station should shortly provide facilities for research into such aspects of local fisheries as the bionomics of economically important aquatic animals, the chemical reactions undergone in fish curing, and putrefaction of cured products as well as research into preservatives for boats and gear. The station is nearing completion.

SALT.

The manufacture, collection, and sale of salt constitute in Ceylon a Government monopoly, which is protected by an import duty. The monopoly is administered by the Executive Committee for Local Administration through the Salt Adviser and the Revenue Officers.

Ceylon consumes about 660,000 cwt. of common salt per annum. The greater part of this salt is manufactured or collected locally, and steps taken during the past four years to enhance and ensure production have been extremely successful and the Island is now in a position to export salt if markets can be found. Salt is manufactured from sea water by solar evaporation at the Government Salterns at Elephant Pass, in the Northern Province, and at Palavi, near Puttalam, in the North-Western Province, also in the privately owned salt pans at

Chiviyateru in the Northern Province, about four miles from Jaffna, at Puttalam and at Nilaveli, eight miles north of Trincomalee. Spontaneously formed salt resulting from the natural evaporation of brine is collected from lagoons in the Hambantota District of the Southern Province and in the Jaffna Peninsula in the Northern Province. These are Crown property. The quantity of salt manufactured at Chiviyateru is small, and the greater part of the Island's supply is derived from the Government Salterns, from the lagoons in the Hambantota District, and from the private salt pans at Puttalam. The following statement shows the total quantity of salt produced in Ceylon during the year and the average of eight years 1931–1938 :—

Producing Centre.	Average for 1931–38. Cwt.	1938. Cwt.
Elephant Pass	159,232	163,337
Palavi	92,984	101,590
Hambantota District	176,843	132,679
Puttalam District (excluding Palavi)	165,785	242,435
Jaffna and Mannar Districts (excluding Elephant Pass) ..	67,475	14,286
Trincomalee District	57,534	63,956
Total ..	719,853	718,283

Stocks at the beginning of 1938 amounted to 1,787,842 cwt. and at the end of the year to 1,849,732 cwt.

The amount realized during the financial year by sale of local salt from the Government depots was Rs. 2,223,470.

Owing to the nearly stationary consumption and the equalizing effect of the import duty the revenue from salt does not show a large percentage of variation from year to year.

PLUMBAGO.

Occurrence.—Plumbago, or graphite, is the most important of the economic Ceylon minerals. It occurs in minute scattered crystals in some of the gneisses, granulites and crystalline limestones, but it is only where it is found in veins that it is of any commercial importance. The veins or pockets vary from the smallest size up to a yard or more in width, and often consist of pure graphite unmixed with other minerals. Frequently, pyrite, quartz, felspar, pyroxene, apatite, &c., are associated with the graphite. The most common country-rock is a pyroxene granulite belonging to the charnockite series.

Mines.—The deeper mines go to a depth of between 600 and 1,200 feet, while considerable quantities of the mineral are obtained very near the surface. Several of the largest mines are fitted with electric light and equipped with modern haulage and other machinery, but in the great majority of the mines the arrangements are very primitive and there is no machine haulage.

The majority of the large mines were closed in 1920, and still remain closed, but a very large number of small mines have been since opened, some of them having worked for a short period up to the end of the year.

One hundred and sixty mines were reported to be working at the end of the year 1938 and employed about 3,527 men.

Prices.—During the year 1938, there was no improvement in the demand, but the average price rose from Rs. 132 to Rs. 148 per ton.

The increase in the demand for plumbago reported in 1937 was due to activity on naval armaments and prices had consequently risen resulting in considerable activity in mining. There was a slight improvement in the demand for graphite at the end of the year.

The average market prices for all grades for the last seven years were as follows :—

	Per Ton. Rs. c.		Per Ton. Rs. c.
1932	168 73	1936	112 40
1933	126 95	1937	132 35
1934	143 2	1938	148 30
1935	148 15		

The graphite produced in Ceylon is reputed to be among the best in the world, the average quality being better than the produce of the Madagascar mines.

Trade.—Plumbago mining and the trade in plumbago have always been in the hands of the Sinhalese and larger mines are worked by capitalists on whose land plumbago occurs. Some of the large mines with mechanical equipment could turn out 200 or more tons a month and the total output from Ceylon, if required, could easily reach 30,000 tons a year.

Uses.—Plumbago is chiefly used in the manufacture of crucibles, furnace-facings, electrodes, and stove polish, for making lubricants, black paint and lead pencils and in electroplating. Large quantity of plumbago is also used in the manufacture of munitions, and the principal buyers have been America, Japan, Germany, and the United Kingdom.

The exports of plumbago in 1938 amounted to 235,656 cwt. valued at Rs. 1,747,451.

OTHER ECONOMIC MINERALS.

Precious Stones.—Precious and semi-precious stones in large variety are found principally in the alluvial gravels of the Ratnapura District and the South-West portion of the Island. The most important are sapphire and ruby (varieties of corundum), chrysoberyl (including cat's eye and the rare stone alexandrite), beryl (acquamarine) and the semi-precious stones, topaz, spinel garnet, zircon, tourmaline, quartz of various colours (cairngorm, citrine, amethyst) and moonstone.

Mining for gems is carried on almost entirely by Sinhalese, on a co-partnership system, from pits dug into old river alluvium and gravels. The stones are bought up by the dealers to be cut and polished by lapidaries, the industry being confined largely to Ratnapura District. The better stones are exported to Europe and America, but the inferior varieties are largely sold locally or in India. It is difficult to estimate the exact value of the annual output, but it may be put at somewhere about Rs. 2,000,000.

With the exception of moonstone, which is mined direct from a band of acid leptynite, and some garnets, the gem-stones are all obtained from alluvial gravels. Sapphire and beryl, however, have been discovered *in situ* in some pegmatite veins in the Matara and Kandy Districts, respectively, and the other minerals named are also probably derived originally from rocks of similar type.

Thorium-bearing Minerals.—A number of minerals containing thorium, uranium and the rare earths have been found in Ceylon, in pegmatite-veins and also in alluvial gravels ; as constituents of natural concentrates in many of the gem gravels and on the seabeach. These were mined on a small scale at one time, but the deposits appear to be exhausted and

production has for a long time ceased. Monazite sands were worked under Government control near Bentota on the West coast, but the work was abandoned in 1927 as unprofitable owing to the heavy fall in the price of the mineral.

Ilmenite Sands.—Large deposits of natural beach concentrates, consisting of about 75 per cent. ilmenite (titanate of iron) and 25 per cent. zircon, rutile, garnet, &c., are known to exist at Pulmoddai and Tirrukovil, North and South of Trincomalee, respectively, on the east coast of the Island. The former deposit has been proved to contain over two million tons of Ilmenite (Fe Ti 03). Smaller deposits are found at other places on the coast. The mineral is used as a source of titanium for the preparation of titanium paints and pigments, an industry of growing importance. The Ceylon deposits have not yet been exploited.

Mica.—A small amount of mica, phlogopite variety, has been produced from pegmatite-veins or from limestones occurring at intrusive contact with granitic rocks. The deposits are very irregular, the commercial mica occurring in patches in the veins, with much barren ground between them. There was a revival of interest in the mineral in 1931 and a few tons were exported. The variety exported was entirely phlogopite (magnesia mica) " amber mica ". Mining of mica, however, is of rather sporadic description and during the year only 6 cwt. of mica was exported valued at Rs. 2,212.

Other Mineral Products.—Other mineral products of Ceylon which are capable of considerable development are the following :—

(1) Kaolin of good quality can be produced from the decomposed felspar of granite rocks in fairly large quantities.

(2) White quartz sand suitable for the manufacture of the commoner kinds of glass occurs in places on the west coast and in the north near Point Pedro.

(3) Limestone of a high degree of purity suitable for use in the manufacture of cement is found in large quantities in the Jaffna Peninsula. The coral deposits of the west and south coast are extensively burnt for lime and are also suitable for cement manufacture. The crystalline limestones of the interior of the Island are almost all dolomitic.

(4) The gneisses and granulites of the charnockite series furnish useful building stones of attractive colours.

(5) Pottery clays and brick-earth suitable for the manufacture of bricks and tiles are found in all the river valleys. Kabuk (laterite) which is the product of decomposition of the crystalline rocks, is extensively used for small buildings. When first quarried, it can be cut into slabs, which harden on exposure to the air. A small quantity of iron-ore is associated with the laterite of some places.

CHAPTER VII.

Commerce.

THE year 1938 was crowded with political and economic events abroad from which repercussions were felt in our oversea trade. The international situation was undoubtedly a disturbing factor militating against trade expansion. The incorporation of Austria in the German Reich, the German putsch into Czechoslovakia, the prolonged war in Spain

DIAGRAM No. 7.

VALUES OF TOTAL TRADE, TOTAL EXPORTS AND TOTAL IMPORTS, CEYLON, SINCE 1924

Reproduced and Printed by Survey Dept. Ceylon
15 2 39

and the Sino-Japanese conflict in the Far East are some of the outstanding events. Political events in September reached a climax almost plunging the whole world in a deadly war. As a result of the tense and electrified atmosphere in Europe, prices in all markets fell. On the other hand immediately after the political tension was somewhat relaxed, the signing of the Anglo-American Trade Agreement in November was the signal for improvement in general trade conditions.

The foreign trade turnover during the year reached Rs. 519·3 million as against Rs. 573·2 million in the preceding year recording a decrease of Rs. 54 million or 9·4 per cent.

Imports during 1938 totalled Rs. 235·5 million which amount represented a fall of Rs. 7·1 million (3·0 per cent.) below the preceding year but comparison with 1936 still showed an increase of Rs. 21·2 million (9·9 per cent.). Exports of demestic produce on the other hand declined sharply from Rs. 310·2 million in 1937 to Rs. 263·5 million in 1938, representing a significant shortfall of Rs. 46·7 million (15·0 per cent.) but there was nevertheless an advance of Rs. 19·1 million (7·8 per cent.) over 1936. The result of these movements is reflected in the total visible balance of trade which declined from the very favourable account of Rs. 87·5 million in 1937 to Rs. 48·7 million in 1938 and was also lower than the favourable balance of Rs. 54·1 million of 1936.

A noteworthy feature of the year was the enormous increase of textile goods from Japan as a result of the abolition of the quota for grey cotton goods and the relaxation of the quota restriction on other classes of foreign textiles. An added feature was the sudden increase in the demand for Ceylon tea from buyers in the United Kingdom in anticipation of a likely enhancement of the import duty on tea which came into effect in the beginning of the second quarter of the year.

Exports of tea accounted for 65·4 per cent. of the total value of domestic exports during 1938. Next in order of importance was rubber representing 17·2 per cent. of the exports. Coconut products contributed 13·1 per cent. of which the share of coconut oil was 5·4 per cent. copra 3·3 per cent., and desiccated coconut 1·7 per cent.

Prices of almost all the export commodities which reached a peak level in 1937 received a sharp setback in the year under review, rubber and coconut products being the principal products mostly affected. Papain and plumbago, however, continued to realize better prices in recent years.

The extent to which Ceylon depends on imported food is denoted by the fact that rice alone represented 23·1 per cent. of the total value of all imports, while curry-stuffs accounted for 1·7 per cent., fish products 6·0 per cent, sugar 3·5 per cent., and milk products 1·1 per cent. Cotton piece-goods take the most prominent place in the list of manufactured goods imported into Ceylon—being 6·5 per cent. of the total import value.

The following table gives the total value of imports, domestic exports and re-exports during the last five years :—

Year.	Total Imports.	Total Exports. Exports (domestic).	Total Exports. Exports (Other than domestic).	Excess of Exports over Imports.
	Rs.	Rs.	Rs.	Rs.
1934	216,996,000	241,193,000	22,617,000	46,814,000
1935	227,501,000	230,041,000	23,072,000	25,612,000
1936	214,338,000	244,415,000	24,060,000	54,137,000
1937	242,600,000	310,198,000	20,365,000	89,475,000
1938	235,529,000	263,535,000	20,215,000	49,294,000

From the above figures it will be seen that the rapid expansion of our foreign trade evident during 1937 received a sharp recession in the following year but comparison with the year 1936 still showed a higher turnover.

The following table shows the percentage distribution of domestic exports consigned to (*a*) the Empire and foreign countries respectively, and (*b*) the principal countries of destination during the last five years :—

Country (Destination).	Percentage Distribution of Exports.				
	1934.	1935.	1936.	1937.	1938.
British Empire—					
United Kingdom	51·58	51·79	49·14	46·35	53·94
Australia	3·72	4·44	4·57	4·26	4·14
British India	3·80	5·23	6·33	4·76	3·43
Canada	2·78	3·32	4·10	5·26	3·50
New Zealand	2·10	2·83	2·85	2·46	2·44
Union of South Africa	2·36	3·32	3·33	3·05	3·12
Other Empire Countries	1·55	1·85	1·54	1·58	1·54
Total British Empire	67·89	72·78	71·86	67·71	72·10
Foreign Countries—					
Belgium	1·47	1·32	1·07	1·42	1·61
Egypt	1·40	1·19	1·07	0·96	1·47
France	2·03	1·55	1·79	1·90	1·70
Germany	2·55	2·62	1·91	3·00	2·10
Italy	2·32	1·55	0·31	1·59	1·49
United States of America	13·90	11·20	15·45	15·66	12·64
Other Foreign Countries	8·44	7·79	6·54	7·76	6·89
Total Foreign Countries	32·11	27·22	28·14	32·29	27·90
Grand Total	100·00	100·00	100·00	100·00	100·00

From the above table it will be observed that the share of exports consigned to British countries has shown a welcome improvement during 1938, particularly in respect of exports to the United Kingdom, who increased her share from 46·3 per cent. in 1937 to 53·9 per cent. in 1938. The United States of America still continued to be our best customer among foreign countries.

The table below shows the share of imports enjoyed by (*a*) the Empire and foreign countries and (*b*) the principal countries of supply during the last five years :—

Country (Source)	Percentage Distribution of Imports.				
	1934.	1935.	1936.	1937.	1938.
British Empire—					
United Kingdom	18·36	20·60	21·11	22·18	20·64
Australia	2·37	2·31	2·45	2·59	2·60
British India	20·15	19·48	21·49	22·01	21·77
Burma	14·59	17·50	15·15	13·88	14·82
Other Empire Countries	5·61	5·99	5·48	5·62	7·35
Total British Empire	61·08	65·88	65·68	66·28	67·18
Foreign Countries—					
Belgium	0·85	0·84	1·36	1·88	1·58
France	0·83	0·71	0·63	0·73	1·05
Germany	1·64	2·04	2·03	2·34	2·07
Iran	6·44	5·58	4·95	3·43	3·24
Italy	0·45	0·23	0·09	0·33	0·30
Japan	8·67	5·37	6·41	6·78	6·54
Siam	5·23	5·49	5·03	2·31	2·78
Sumatra	4·40	4·11	3·18	4·51	3·97
United States of America	2·32	2·13	2·25	2·57	2·17
Other Foreign Countries	8·09	7·62	8·39	8·84	9·12
Total Foreign Countries	38·92	34·12	34·32	33·72	32·82
Grand Total	100·00	100·00	100·00	100·00	100·00

It may be noted that the percentage share supplied by Empire countries has shown a slight improvement particularly in respect of British possessions, such as Burma who supplies most of our rice. Foreign countries

which also received increased shares were Siam and France. Though her share fell slightly below the percentage recorded in the preceding year, Japan was still the leading foreign supplier.

Principal Articles of Export.

Description of Export.	Unit.	Quantity. 1938.	Quantity. 1937.	Value (Rs.) 1938.	Value (Rs.) 1937.
				(Thousands)

Tobacco (unmanufactured)	lb.	2,100	2,414	631	710

Notes on Principal Exports.

Tea.

Tea continues to be the most prominent article of export from Ceylon and accounted for 65·4 per cent. of the value of export trade during 1938. Shipments of tea in 1938 totalled 235·7 million lb. valued at Rs. 172·4 million as against 213·7 million lb. valued at Rs. 170·6 million in the preceding year—recording a noteworthy increase of 22·0 million lb. (10·3 per cent). The quantitative increase in tea exports was reflected principally in heavier shipments to the United Kingdom (21·4 million lb.) who is usually our best customer, while smaller improvements were also noticeable in respect of the purchases made by Australia, Canada, Newfoundland and the Union of South Africa. As a result chiefly of the increased duty on tea entering the United Kingdom, producers were obliged to lower prices—the average for 1938 being 70 cents per lb. as against 76 cents per lb. in the preceding year. Prices nevertheless were higher than in 1936 by about 3 cents per lb.

Rubber.

Exports of rubber valued at Rs. 45·3 million aggregated 114·6 million lb. or 41·5 million lb. (26·6 per cent.) less than in the preceding year. The United States of America is out best customer for this commodity taking 54·4 million in 1938 which quantity, however, was smaller by 19·3 million than in 1937. The United Kingdom and Germany occupied the second and third places respectively in our list of best customers in this market. The price of rubber averaged 37 cents per lb. as against 50 cents per lb. in the preceding year as a result of a sharp fall in the American demand.

Coconut Products.

The total export value of coconut products amounted to Rs. 34·5 million which sum represented a pronounced fall of Rs. 14·1 million or 29·0 per cent. below the level attained in 1937. The volume of exports

of coconut products (copra, coconut oil, desiccated coconut and fresh nuts) expressed in terms of nuts aggregated 1,155 million nuts and were 92 million nuts more than in the preceding year but the price index which stood at 72·0 in 1937 fell sharply to 45·3—the lowest level on record since 1934 compared with the average for 1927–29 (100).

Copra.—Copra exports valued at Rs. 8·8 million aggregated 1·5 million cwt. indicating an advance of 86·7 thousand cwt. (6·1 per cent.) over the preceding year. British India topped the list of importing countries as usual and took 838 thousand cwt. in 1938, as against 957 thousand cwt. in the preceding year. On the other hand, European countries such as Italy, Germany, and Holland who resumed purchases in 1937 continued to increase their buyings in the year under review. The average price of Estate No. 1 Copra was Rs. 27·74 per candy as compared with Rs. 47·23 per candy in 1937—the decline being due partly to the increase in stocks of oils and fats in the markets in the United States of America and elsewhere.

Coconut Oil.—Shipments of coconut oil totalled 1·5 million cwt. valued at Rs. 14·1 million as against 1·3 million cwt. valued at Rs. 20·1 million in 1937. Nearly a third of our exports of coconut oil was absorbed by the United Kingdom who ranks first in the list of our customers. Other important buyers in order of precedence were Canada, Sweden, and British India. The price of coconut oil averaged Rs. 184·22 per ton having fallen sharply from the high level at Rs. 302·72 per ton touched in 1937.

Desiccated Coconut.—Exports of desiccated coconut reached 594 thousand cwt. or 5 thousand cwt. more than in the preceding year and were valued at Rs. 4·4 million as against Rs. 6·8 million in 1937. The leading market as usual was the United Kingdom who purchased 331 thousand cwt. or 55·6 per cent. of the total export trade in this commodity. Other regular customers were Holland, Germany, Belgium, and France. The average price of desiccated coconut reached the very low level at 6 cents per lb. which is the lowest on record since 1934.

Fresh Coconuts.—The total number of nuts exported in 1938 was 16·0 million nuts or 4·9 million nuts (43·5 per cent.) more than in the preceding year, while the sum realized was Rs. 635 thousand as compared with Rs. 621 thousand in 1937. The United Kingdom was the leading market for fresh coconut and her takings amounted 5·6 million nuts as against 4·0 million nuts in the preceding year. Egypt was next in order of importance while British India and Holland were third and fourth respectively in the list.

Coconut Poonac.—Exports of coconut poonac aggregated 733 thousand cwt. valued at Rs. 27 million and were 127 thousand cwt. heavier than in 1937. Belgium as usual absorbed practically all our exports taking as much as 712 thousand cwt. in 1938. The price of coconut poonac averaged Rs. 75·27 per ton recording a decrease of Rs. 3·19 per ton below the level touched in 1937.

Coir Fibre.—Shipments of coir fibre (bristle and mattress) declined in both quantity and value, reaching 732 thousand cwt. valued at Rs. 2·1 million as against 928 thousand cwt. in 1937 valued at Rs. 3·9 million. The United Kingdom was the leading buyer taking 249 thousand cwt. during the year 1938 while other important customers were Japan, the Union of South Africa, Germany, and Belgium. The market price of

Copyright Photograph. *Chitrafoto.*

WALL PAINTINGS.

coir bristles averaged Rs. 3·06 per cwt. in contrast to Rs. 5·49 per cwt. in 1937, while mattress fibre was quoted Rs. 2·29 per cwt. or 58 cents per cwt. lower than in 1937.

Coir Yarn.—Exports of coir yarn totalled 92 thousand cwt. realizing a sum of Rs. 918 thousand and were 16 thousand cwt. smaller than in the preceding year. Germany was our principal market for coir yarn while the United Kingdom occupied second place. The price average continued to improve from Rs. 8·70 per cwt. in 1937 to Rs. 8·97 per cwt. in the year under review.

Coconut Shell Charcoal.—Exports of coconut shell charcoal amounted to 220 thousand cwt. valued at Rs. 824 thousand as against 269 thousand cwt. valued at Rs. 978 thousand in the year 1937. The leading market for coconut shell charcoal was the United Kingdom, while France was also an important buyer.

Cacao.

The sudden recovery noticeable in the cacao trade in 1937, received a sharp set-back during the year under review. Shipments of cacao reached 8·1 million lb. as compared with 8·7 million in 1937, but the value realized fell sharply from Rs. 2·6 million in that year to Rs. 1·4 million in 1938. The Philippine Islands who is our best market for cacao continued to increase her takings from 3·8 million lb. in 1937 to 3·9 million lb. in 1938. The United Kingdom and Canada were also important customers in our list. The market price of cacao No. 1 declined sharply from Rs. 33·65 per cwt. in 1937 to Rs. 19·33 per cwt. as a result of the " hold up " in West Africa.

Plumbago.

The quantity of plumbago shipped in 1938 (Rs. 1·7 million) aggregated 236 thousand cwt. registering a decrease of 112 thousand cwt. below the level reached in the preceding year—the decline being principally due to a heavy reduction in the takings of the United States of America, who as usual was our best customer for Ceylon plumbago. Japan, however, was the leading buyer in 1938, closely followed by the United States of America, while the United Kingdom was a good third. The price of plumbago averaged Rs. 7·42 per cwt. which was better than the average at Rs. 6·62 prevailing in the previous year.

Cinnamon.

Exports of quills and chips valued at Rs. 1·6 million amounted to 47·0 thousand cwt. and were 5·3 thousand cwt. smaller than in 1937. Mexico as usual headed the list by buying 14·1 thousand cwt., while the United Kingdom and Germany absorbed 5·9 thousand cwt. and 4·3 thousand cwt. respectively. The average price of quills was 40 cents per lb. as against 43 cents per lb. in the preceding year.

Cinnamon Oil.

Exports of cinnamon oil (Rs. 444 thousand) totalled 2·8 million oz. which quantity represented a slight decrease of 0·1 million oz. below the preceding year. The United States of America (1·9 million oz.) and the United Kingdom (0·4 million oz.) were the leading customers who increased their takings, while shipments to the Straits Settlements (0·3 million oz.) fell to some extent. The total value of exports remained more or less at the same level during the last three years though the quantity exported continued to move in a downward trend.

Citronella Oil.

Exports of citronella oil were valued at Rs. 1·2 million and reached 1·6 million lb. as against 1·5 million in the preceding year or 1·3 million in 1936. The United States of America continued to top the list by taking over 812 thousand lb., while the United Kingdom was satisfied with 270 thousand lb. and Germany with 141 thousand lb. The price of citronella oil averaged 73 cents per lb. in contrast to 87 cents per lb. in 1937 or as against the low level at 42 cents per lb. in 1936.

Arecanuts.

Exports of arecanuts (Rs. 1·0 million) increased from 68·3 thousand cwt. in 1937 to 83·9 thousand cwt. in 1938. British India was the principal market for arecanut taking as much as 82·8 per cent. of our total exports. Prices averaged Rs. 12·28 per cwt. which average was slightly lower than in the preceding year but compared favourably with the average of Rs. 11·26 per cwt. in 1936.

Cardamoms.

Shipments of cardamoms fetching a sum of Rs. 485 thousand totalled 3·7 thousand cwt. or 0·8 thousand cwt. more than in 1937, but prices fell sharply from Rs. 2·10 per lb. in 1937 to Rs. 1·20 per lb. in the year under review.

Notes on Principal Imports.

Rice.—Though imports of rice increased slightly from 10·3 million cwt. in 1937 to 10·4 million cwt. in the year under review, the total import value of rice rose sharply from Rs. 50·7 million to Rs. 54·3 million —a 7·1 per cent. increase. Adverse weather conditions were chiefly responsible for the advance in prices. Burma as the leading supplier sent approximately two-thirds of our total requirements but the quantity received from this country in 1938 was 164 thousand cwt. smaller than in the preceding year. Supplies from British India on the other hand improved by 172 thousand cwt. and from Siam by 159 thousand cwt.

Other Grains.—The principal imports under this group are paddy, pulses, gram and beans. 55·4 per cent. of the paddy and 38·0 per cent. of the beans came from Burma, while 96·2 per cent. of the pulses and 78·5 per cent. of gram arrived from British India. With the exception of beans imports of all other grains showed increases over the preceding year.

Sugar.—Imports of sugar were valued at Rs. 8·3 million and aggregated 1·5 million cwt. recording a slight decrease of 35 thousand cwt. below the preceding year. Java alone supplied 1·3 million cwt. of our total requirements during 1938.

Wheat Flour.—Consignments of wheat flour including atta and soojee valued at Rs. 1·9 million totalled 314 thousand cwt. or 28 thousand cwt. more than in the preceding year. Practically the whole of our requirements arrived from Australia. Though British India has taken a larger portion of the trade in wheat and wheat flour in recent years, supplies of flour from British India last year fell by almost half the quantity sent to us in 1937.

Tobacco, Cigars, and Cigarettes.—The outstanding feature in the narcotics group was the marked increase in the consumption of beedies. Imports of beedies valued at Rs. 1·0 million rose sharply from 100 thousand lb. in 1937 to 262 thousand lb. in the year under review—the whole supply flowing in from British India. The consumption of imported cigarettes advanced by 8 thousand lb. to 36 thousand lb. in 1938—the principal source of supply being the United Kingdom. Raw tobacco (Rs. 1·1 million) to the extent of 1·3 million lb. was imported during 1938 of which 88·6 per cent. was supplied by the United States of America.

Coal and Liquid Fuel.—Imports of liquid fuel totalling Rs. 13·3 million rose substantially from 80·1 million gallons in 1937 to 100·2 million gallons in 1938—25·0 per cent. increase. The principal sources from which they were obtained were Iran, Bahrein Islands, and Sarawak. Coal imports (Rs. 6·2 million) totalled 384 thousand tons and were 32·8 per cent. less than in 1937. Coal from British India accounted for nearly two-thirds of the imports and the balance came largely from the Union of South Africa.

Fertilizers.—Imports of fertilizers were valued at Rs. 7·7 million and Rs. 30 thousand or 0·4 per cent. less than in the preceding year. Of the several varieties imported the following principal items showed increases : fish manure (Rs. 139 thousand), fish guana (Rs. 43 thousand), muriate of potash (Rs. 34 thousand), and sulphate of ammonia (Rs. 420 thousand). On the other hand the chief varieties which recorded declines were blood meal (Rs. 78 thousand), bone meal (Rs. 154 thousand),

mineral rock phosphate (Rs. 114 thousand), sylvinite (Rs. 55 thousand), calcium cynamide (Rs. 45 thousand), groundnut poonac (Rs. 73 thousand), refuse of salt petre (Rs. 6 thousand) and superphosphates (Rs. 18 thousand). Most of these came from British India except mineral rock phosphates from Egypt, calcium cynamide from Jugo-Slavia, muriate of potash from Germany, sulphate of ammonia from the United Kingdom.

Cement.—Imports of cement continued to expand from 1·5 million cwt. in 1937 to 1·6 million cwt. in 1938—Japan supplying 57·6 per cent. and the United Kingdom 39·9 per cent. of the total imports. Shipments of Japanese cement increased from 825 thousand cwt. in 1937 to 912 thousand cwt. in 1938, while imports from the United Kingdom were 631 thousand cwt. in 1938 as against 568 thousand cwt. in the preceding year. Prices of Japanese cement were much lower than those of other countries.

Metal and Metalware, Ferrous.—Imports of metal and metalware ferrous valued at Rs. 9·0 million amounted to 735·7 thousand cwt. and recorded a decline of 162·8 thousand cwt. (18·2 per cent.) below the level reached in the preceding year. The United Kingdom supplied 55·9 per cent. of the total imports, while France and Belgium accounted for 13·2 per cent. and 12·9 per cent. respectively. The movements in the main articles under this group imported from the United Kingdom were as follows :—Pig iron decreased sharply from 10,301 cwt. in 1937 to 2,800 cwt. in 1938, but British India increased her exports from 6,086 cwt. to 9,657 cwt. ; non-fabricated steel bars and rods dropped from 1,732 cwt. to 1,102 cwt. ; iron and steel girders, &c., increased from 29,638 cwt. to 45,737 cwt. ; galvanized corrugated sheets declined from 45,386 cwt. to 33,807 cwt. ; tinned plates and sheets dropped from 32,627 cwt. to 17,941 cwt. ; tubes, pipes and fittings rose from 72·4 thousand cwt. to 89·3 thousand cwt.

Non-Ferrous Metals and Metalware.—Imports under this group (Rs. 2·4 million) continued to drop sharply from 41·2 thousand cwt. in 1937 to 34·1 thousand cwt. in the year under review—a 17·2 per cent. fall. The United Kingdom accounted for 58 per cent. of the total import value, while British India and Germany contributed 19 per cent. and 12 per cent. respectively. The principal article imported under this head was aluminium lining the bulk of which was obtained from the United Kingdom.

Cotton Piece Goods.—Imports of cotton piece goods totalled 63·5 million yards valued at Rs. 15·3 million and showed a decrease of 3·5 million yards (5·3 per cent.) below the yardage recorded for 1937.

This decline was due to a sharp contraction in imports of bleached and dyed cotton goods by 4·5 million yards and 5·5 million yards respectively which nevertheless was offset to a large extent by heavier receipts of grey sheeting (5·4 million yards) and also printed material (1·0 million yards). The phenomenal increase in Japanese cotton piece goods was the result of a further relaxation of the restriction on imports of Japanese textiles in the beginning of the year so that Japan once again regained the lead held by her in 1934. British India was relegated to second place and the United Kingdom was a poor third.

Average prices of all varieties of Japanese piece goods were cheaper than in the preceding year and were in fact the lowest on record since 1934.

Copyright Photograph. *Chitrafoto.*

WALL PAINTINGS.

Kerosene Oil.—The quantity of kerosene oil imported during 1938 was 8·2 million gallons as against 8·6 million gallons in the preceding year—recording a decrease of 4·0 per cent. The whole supply came practically from Sumatra.

Petrol.—Imports of motor spirits (Rs. 6·2 million) totalled 12·3 million gallons and were 1·9 million gallons less than in 1937. Sumatra continued to be the only source of supply.

Motor Vehicles.—Imports of motor cars were valued at Rs. 3·1 million as against Rs. 4·4 million in the preceding year. The United Kingdom was the leading supplier and accounted for 82·0 per cent. of the total import value. Imports of motor buses and lorries reached Rs. 803 thousand which represented however a decline of 49·7 per cent. below the preceding year. The United States of America however was the largest supplier (43·3 per cent.), while the United Kingdom was a good second (40·8 per cent.).

Tea Chests.—Comparison with 1937 revealed an increase of 480 thousand chests while the value also showed an expansion of Rs. 1·3 million. Imports from Japan which supplied 51·7 per cent. of our requirements increased by 363 thousand chests as compared with 1937. Finland was the next largest supplier sending us 844 thousand chests or 19 thousand chests more than in the preceding year.

Bullion and Specie.

The following table shows the imports and exports of bullion and specie during the last five years :—

Year.	Imports.	Exports.	Excess of Exports over Imports (+) and Imports over Exports (—).
1934	—	77,900	+ 77,900
1935	33,571	28,400	— 5,171
1936	96,940	117,150	+ 20,210
1937	535,520	41,838	— 493,682
1938	745,775	110,500	— 635,275

Imports of bullion and specie during 1938 totalled Rs. 746 thousand as against Rs. 536 thousand in the preceding year of which gold coin and bullion from British India alone amounted to Rs. 648 thousand. Silver bullion valued at Rs. 72 thousand made its way from the United Kingdom Exports of bullion and specie on the other hand reached Rs. 111 thousand compared with Rs. 42 thousand in the preceding year and consisted chiefly of gold bullion valued at Rs. 60 thousand consigned to British India and silver coin valued at Rs. 48 thousand shipped to the Maldive Islands.

DEPARTMENT OF COMMERCE AND INDUSTRIES.

To assist in the development of the industrial and commercial activities of Ceylon the Bureau of Industry and Commerce which was previously formed as a section of the Department of the Registrar-General was established during 1938, as a new department under the Director of Commerce and Industries Apart from the financial assistance and technical advice given to local industries, the primary object of the Department of Commerce and Industries is to foster the export trade of the country. The Director of Commerce and Industries was appointed in the latter half of last year Imperial Trade Correspondent to the Department of Overseas Trade, England, and is in a very favourable position to

offer local traders the advantages of a reliable and effective Government organization for it is now possible for this Department to communicate direct with oversea officers of the Department of Overseas Trade.

Further, the Department of Commerce and Industries is represented in the United Kingdom and India by Trade Commissioners appointed from Ceylon and their headquarters are situated at London and Bombay respectively. Both these institutions are in reality oversea branch offices under the supervision of the Director of Commerce and Industries.

TOURIST BUREAU.

In order to promote tourist traffic to Ceylon, a Government Tourist and Publicity Bureau was established in June, 1937. The office of the Bureau is housed in the Grand Oriental Hotel building, York street, Colombo. The Bureau is a non-profit organization and its services are rendered free. All information on Ceylon, advice on matters of tourist interest and travel literature can be obtained from the Director, Government Tourist and Publicity Bureau.

CHAPTER VIII.

Labour.

No marked change occurred in the labour position in Ceylon during 1938 and no new spheres of employment attracted to it workers hitherto unemployed or engaged in other pursuits.

During the beginning of the year a drought was experienced in the northern and eastern parts of the Island which necessitated the provision of relief to the peasantry dependant for their livelihood on the successful harvesting of crops. These were employed on schemes of public utility such as the construction and repair of roads and irrigation works.

The failure of the north-east monsoon on which the major portion of the Island relies for its rain prevented any successful cultivation being undertaken in considerable areas of the Island. Extensive relief measures had to be organized and towards the end of the year were still in operation. Rs. 200,000 were voted by the State Council in this connection but reports received showed this sum to be totally inadequate and further expenditure would be necessary on a vast scale almost comparable to that of 1935.

No shortage of workers was experienced in the tea and rubber industries and in spite of the restrictions which limited the free migration of labourers between India and Ceylon, estates appeared to experience no difficulty in securing an adequate labour force. These restrictions had been imposed by the Government of India in order to bring pressure to bear on the Government of Ceylon to settle certain political differences which had arisen between the two Governments and to secure a rise in wages. It was not apparent that this action was in the interest of the labourers nor did it appear to be in accordance with the spirit of the Indian Immigration Act which was designed to make it easy for workers to find employment abroad.

The question of wages of these Indian labourers was, however, reviewed in the light of the variation in the cost of living since they were last fixed : investigation did not disclose that any rise in prices had occurred so as to presume the labourers were undergoing any hardship. Inquiries,

in fact, proved that on a greater number of tea and rubber estates wages were paid in excess of the minimum rates fixed. However, towards the close of the year the wages boards were summoned to review and adjudicate upon representations made on the proposal to vary rates of wages. At the end of the year the decisions of these boards had not been received.

The housing conditions on tea and rubber estates, the provision of medical facilities as well as the introduction of improved sanitary measures continued to receive the attention of Government and planting industries.

The Report of Sir Edward Jackson was received during the course of the year with regard to the proposal to impose measures whereby Indian immigration into this country could be controlled. His view generally is that the close proximity of the two countries causes the state of the Indian labour market in Ceylon to be a very fluid one. The Indian worker comes to Ceylon when there is employment available and returns to his village in South India, when he is unable to find any occupation in this country. His presence therefore in Ceylon is largely influenced by the desire of the Sinhalese labourer to obtain employment in those occupations which the Indian is usually engaged. Sir Edward Jackson does not advocate the establishment of any control of Indian immigration into Ceylon.

Certain sections of public opinion appear to regard the Indian labourer as responsible for the inability of the Sinhalese to find employment and motions have been introduced into the State Council indicating that the conclusions of Sir Edward Jackson are not likely to be accepted.

The Report, however, is still being considered by the Board of Ministers, who have not indicated the line of action which they propose to take with regard to Indian immigration into this country.

The Agencies established for the purpose of furthering the employment of Sinhalese on tea and rubber estates continued to function throughout the year though during the last six months, few, if any, applications were received at the Agencies for the supply of Sinhalese labour. Statistics generally indicated that the employment of Sinhalese in these industries continued to increase in spite of the lack of support given to the Agencies, the future of which is at present under consideration.

Provision was made in the estimates of expenditure for 1937–38 for the appointment of 3 Labour Inspectors to foster the further employment of the Sinhalese villager as an estate labourer. The recommendations for these appointments are still under consideration.

Unemployment was caused owing to the closure of mills in the Chilaw District engaged in the manufacture of coconut derivatives. As a relief measure work was undertaken on the construction of certain public works on which the *ex*-mill employees were engaged. The mills had not re-opened at the end of 1938 and the relief scheme was still in operation.

The unemployment in the City of Colombo continued to be engaged on relief schemes involving work of non-skilled nature and at the present moment there seems little likelihood of any stoppage of these schemes owing to the improvement in the economic situation. In fact at the end of 1938 more workers were in the receipt of relief than at the end of 1937.

The year 1938 was free from any industrial disputes of any magnitude. The Board of Conciliation appointed under Ordinance No. 3 of 1931 in consequence of a strike at the Ceylon Spinning and Weaving Mills published its award which were accepted by all parties as a settlement of the outstanding dispute.

A Board under the same Ordinance was appointed in consequence of a dispute arising between the owners of a Motor Omnibus Company and its employees relating to the rates at which the latter were remunerated. The Company had no difficulty in obtaining workers in place of the strikers and appeared to display no necessity in the Board reaching early decision. At the end of the year a meeting was still being held.

The Workmen's Compensation Act continues to operate successfully and its provisions are being more readily appreciated by the workers involved. The accidents reported during 1938 totalled 5,610 as compared with 4,028 in 1937.

Thirty-three Trade Unions have been registered under the Trade Unions Act of 1935, an increase of 2 over the number registered at the close of 1937. The Trade Unions Ordinance has so far met with little success in this country and there are at present little or no signs that the workers concerned appreciate the value of associations. Efforts are being made, however, chiefly through the aid of the Workmen's Compensation Act to encourage Trade Unions to take an interest in benefits which this Act confers on the members of the unions. Employers have also been asked to encourage their workers to form associations which can be registered under the Trade Unions Act.

During 1938 a Shops Act was passed by the State Council and the date from which it shall be proclaimed is still under consideration.

The Maternity Benefits Act is before the State Council and has already passed the second reading.

The new Wages Boards Act and a Factories Act are still in the hands of the Legal Draftsman.

CHAPTER IX.

Wages and the Cost of Living.

Labour in Ceylon.

1.—*Agricultural.*

About 850,000 acres are cultivated in paddy. The whole of this area is worked by village labour usually by the owner or lessee of the land, and his relations, but frequently also by hired labour.

The Estates.— The principal crops grown under estate conditions are tea, rubber, and coconuts. Tea estates almost entirely, and rubber estates for the most part, are worked by labour imported from South India (Tamil or Telugu). A few Indians are also employed on coconut estates, but these are mostly worked by Ceylonese.

At the end of 1938 the total number of Indians on estates was roughly 680,000, as compared with 657,000 at the end of 1937. The total number of arrivals of estate labourers during the year amounted to 47,210 and the departures to 46,807.

2.—*Industrial.*

A large number of labourers are employed in various activities connected with the port of Colombo, *e.g.*, as stevedore labourers, or in the coal-yard and marine engineering works.

Wages.—Under Ordinance No. 27 of 1927 a minimum wage is fixed for Indian labourers on tea and rubber estates and the new rates of wages in force from November 16, 1934, are—

	Men. Cents.	Women. Cents.	Children. Cents.	
Up-country	49	39	29	with rice at a rate not exceeding Rs. 4·80 per bushel
Mid-country	43	35	25	
Low-country	41	33	24	

In 1927 a Commission appointed to inquire into wages earned by the harbour workers in Colombo recommended the following rates which were accepted by the employers :—

	Loading Cargo. Rs. c.	Discharging Cargo. Rs. c.
Day, Full	1 75	1 60
Broken Periods, 6 A.M. to 12 noon	1 0 (*i.e.*) (87 plus 10)	0 90 (*i.e.*) (80 plus 10)
12 noon to 6 P.M.	0 87 *	0 80 *
or Every half or part thereof	0 20 †	0 20 †
Night—		
Full	3 50	3 20
Half	1 75 *	1 60 *
Broken Periods— For every hour between 6 P.M. and midnight	0 30	0 30

The following table shows the classification adopted by Government for daily and hourly paid labour :—

		Rates per Hour. Minimum. Cents.	Maximum. Cents.
Minor supervising grades	Class A I.	48	81
	A II.	31	63
Tradesmen	Class A III.	36	53
	A IV.	20	35
Semi-skilled labour	Class A V.	12	20
Unskilled labour	Class A VI.	8	14
Trade apprentices	Class A VII.	10	18
Women and boys	Class A VIII.	3	10

		Rates per Diem. Minimum. Rs. c.	Maximum. Rs. c.
Minor supervising grades	Class B I.	3 84	6 48
	B II.	2 48	5 4
Skilled labour	Class B III.	2 88	4 24
	B IV.	1 60	2 80
Semi-skilled labour	Class B V.	0 96	1 60
Unskilled labour	Class B VI.	0 64	1 12
Trade apprentices	Class B VII.	0 80	1 44
Women and boys	Class B VIII.	0 24	0 80

Estates employing Indian labour are required by law to pay their labourers monthly. In Colombo wages are often paid every week or fortnight.

Other Benefits available to Labour.

On nearly all estates the resident labour force is provided with free housing accommodation. In Colombo a few firms make similar provision for their labourers, but in most cases the latter find their own lodgings. Indians employed by the stevedore contractors are generally housed in a "kitangi"—a sort of barrack where the men sleep together in one large room.

* Subject to the qualification that wages by the hour for any fraction of a half day or half night shall not exceed the wages payable for the whole of that half day or half night.

† A full night's wages are payable when a labourer works from 6 P.M. to any fraction of the night beyond midnight.

Medical Attention and Provision for Old Age.—Estate labourers are entitled to free medical treatment either at the estate hospital (if there is one) or at the nearest Government hospital. Other labourers are entitled to free treatment at Government hospitals if they earn less than Rs. 50 per month in wages.

Female labourers on estates are entitled to free lodgings and medical care for one month after confinement.

Indian Labour on Estates.—Sick and indigent labourers are repatriated to India at the expense of the Immigration Fund.

Most estates pay a pension to deserving labourers who are no longer able to work. Free meals are usually given daily to children.

The Workmen's Compensation Ordinance, No. 19 of 1934, came into operation on August 1, 1935. It provides for compensation to be paid by the employer on the lines of the Indian Act to every workman who is injured by accident arising out of and in the course of his employment and to the dependents of workmen who have died as the result of such accident.

The Trade Unions Ordinance, No. 14 of 1935, came into operation on November 1, 1935. It provides for the compulsory registration of all Trade Unions.

CHAPTER X.

Education and Welfare Institutions.

Control.—Primary and secondary education in Ceylon, under the control of the Minister of Education and the Executive Committee of Education, is administered by the Department of Education, assisted by a Board of Education and 23 Education District Committees.

Board of Education.—The Board of Education is composed of 20 members nominated by the Governor. The Director of Education is Chairman and the personnel of the Board includes members of the State Council, managers of schools, and teachers. The main duties of the Board are to advise the Government on any educational matters especially referred to it for advice. It is not an administrative or executive body, and all regulations which are recommended by the Board require the confirmation of the Governor, and are thereafter laid before the State Council.

Education District Committees.—An Education District Committee has been constituted in each Municipality and Revenue District. These Committees are appointed by the Governor, and consist partly of officials and partly of unofficials. They are responsible first for putting into effect the rules relating to compulsory education and they frame by-laws and employ attendance officers for this purpose. Secondly, they erect and maintain schools where these are required. They are financed by an annual grant from the department, which is allocated on the basis of an approved programme of works submitted each year to the department.

Schools and Attendance.—The system of education in Ceylon provides a course of education leading to University degrees in arts, and science, and diplomas in medicine and law.

The schools of Ceylon are not divided on a basis of race or nationality. All schools which are maintained by Government or assisted by means of grants are compelled by law to admit pupils irrespective of race, nationality, or religion.

Photo by Werner Coaitz. *Courtesy Govt. Tourist Bureau.*

GALLE GATE.

Attendance at school between the ages of six and fourteen is compulsory, subject to a few exceptions. Such compulsion, however, applies only when school accommodation is provided within a reasonable distance of the residence of the pupil.

There are two distinct types of schools—schools administered directly by Government, schools assisted by Government and under the immediate control of private managers.

There are 1,923 Government schools, and the arrangements for the staffing of these are entirely in the hands of the department. All examinations for the issue of teachers' certificates and of otherwise testing efficiency, and all appointments, transfers, &c., are also dealt with by the department.

Assisted Schools and the Grant System.—There are in addition 3,101 (including schools attached to places of religious worship) Assisted schools under the immediate control of private managers. These schools receive an annual grant from the Education Department. In the case of vernacular schools the annual grant is calculated as the total amount of the salaries paid to an efficient staff plus an additional amount for maintenance. No fees are charged in vernacular schools. In the case of the English schools, however, fees are charged and from such fees the manager has to provide a fixed sum towards the salary of each teacher he employs. The grant consists of the balance of such salaries.

There are 156 schools attached to places of religious worship. These schools are supported by grants from Government funds.

In addition to Government Assisted schools, there is a certain number of private schools which are not assisted in any way by Government funds. Such schools are, however, subject to inspection by the department.

The type of instruction given in Ceylon schools can be considered under two main headings: (i.) non-vocational instruction; (ii.) vocational instruction.

Classification of Schools.—Under the heading of non-vocational instruction is included the type of instruction which is general and academic, and by far the larger number of schools come under this class. These schools are classified as follows :—

English.	Bilingual.	Vernacular.
Collegiate	Senior Secondary	Senior Secondary
Senior Secondary	Junior Secondary	Junior Secondary
Junior Secondary	Primary	Primary
Primary		

The primary schools provide a course of instruction from the Kindergarten up to Standard V. The course usually lasts six years.

The junior secondary schools provide a course of instruction from the Kindegarten up to the School-Leaving Certificate. The course usually lasts ten years.

The senior secondary schools provide, in addition to the course for the junior secondary schools, a further course up to the standard of the London Matriculation Examination. The course usually lasts twelve years.

The collegiate school is an English school which provides a course of instruction from Form I. or Standard VI. up to the standard of the London Matriculation Examination. The course usually lasts five years.

4——J. N. 83918 (5/39)

The vast majority of students complete their education at the junior secondary stage.

In addition to the schools that come under the above classification, there is a certain number of temple schools, which are known as Pirivenas. These schools are primarily intended for the Buddhist priesthood, and are not compelled to adopt the syllabus of work used by the ordinary schools.

Vocational Schools.—Under the heading of vocational schools come those schools which give a specialized form of instruction. Apart from one Tecnnical College, these can be divided into part-time schools and full-time schools. Under the heading of part-time instruction is included a variety of home industries which are taught to pupils in certain schools in addition to the ordinary academic course. Under the heading of full-time industrial schools come institutions for the training of teachers, technical schools, agricultural schools, and industrial schools. The course in training schools is usually one of two years. In technical schools it varies according to the subject which is studied. In agricultural schools course are entirely for adults who intend either to teach agricultural science or to become practical agriculturists. There is a variety of full-time industrial schools. All industrial schools are conducted upon a profit-sharing principle, so that the pupils benefit by whatever articles they produce. The course is one of two or three years. The subjects in which instruction is given are :—carpentry, weaving, basket work, pottery, printing, lacquer work, blacksmith work, and a few other minor industries.

The medium of Instruction.—The medium of instruction in schools varies according to the type of schools. In vernacular schools the medium of instruction is entirely Sinhalese or Tamil. This group of schools includes 81 per cent. of all the school-going children in Ceylon.

In Bilingual schools the vernacular language is the medium of instruction for the first four or five years of school life, after which a course of English is introduced in Standard IV. Every year thereafter the number of periods allotted to English is increased. The vernacular, however, continues to be taught throughout the whole course. There are also vernacular schools where an optional course of English, for one period a day, is given in all classes above Standard III.

In the case of the third group of schools, viz., English schools, two methods are employed in giving instruction in the English language.

In the first method pupils are admitted at the earliest stage of school life, viz., the Kindergarten. Pupils admitted in this way have usually a working knowledge of English, so that their progress in mastering the language is very rapid.

The second method employed is a two-year special course in English for pupils, who go from vernacular schools to English schools. The pupils who enter this course are approximately nine years of age, and have already received instruction in their own mother tongue in the primary standards. This course is an intensive one, in which the direct method of teaching a foreign language is employed. After completing this course pupils are able to enter the ordinary standards of the English school, in which the medium of instruction is English. In the majority of such schools the vernacular languages continue to be taught throughout the upper classes.

It will be seen, therefore, that in the system of instruction prevailing in Ceylon the pupils are given the following alternative courses :—(1) a full course of instruction in the vernacular languages ; (2) a full course of instruction in the vernacular languages plus a working knowledge of English ; and (3) a full course of instruction in English, not merely for pupils whose mother tongue is English, but for those who at the beginning of school life have no knowledge of that language.

SCHOOL FOR THE DEAF AND BLIND.

During the year 1938, 39 children were admitted, 25 of them being deaf and 14 blind. The total number of the deaf and blind children is classified thus :—

	School.		Industrial.		
	Boys.	Girls.	Boys.	Girls.	Total.
Deaf	97	51	5	3	156
Blind	45	60	12	2	119
					275

Applications for admission of deaf boys over the age of 9 have constantly been refused partly owing to lack of room, but chiefly because a deaf child unless he is only " hard of hearing ", must begin to learn at 5 or 6 years old if the school work is to be of any value to him.

Several blind children 14 or 15 years old had also to be refused admission. They are too old to be taught in the school and the Industrial Departments have to be reserved for those who have been through this part of school. Several mentally defective blind children have been refused and there are still several in the school who have no relations or friends and for whom the school must therefore be responsible.

Health.—There was an outbreak of mumps in the school during the second term of the year. Otherwise the health of the children has been very good.

Deaf School.—An electrical Hearing Aid, the Multitone, was installed in February. It is regularly used by all the children who have a trace of residual hearing. The speech and language of these children have improved to a very marked extent.

The speech standard in the kindergarten classes continues to be good but in all the classes there are far too many children to make possible the intensive individual teaching of language which is so essential for the deaf.

Blind School.—The standard of work in the blind school continues to be satisfactory. The majority of the children are alert and intelligent. Chair caning as a handwork subject, has been successfully introduced into the boys' syllabus.

Braille text books required in the school next year, are being produced and bound by the senior boys and girls.

The blind boys have given a broadcast concert of Sinhalese folk songs collected by one of the boys in the Maho district.

School excursions, which have proved to be of great value in both deaf and blind schools, have had to be restricted in number this year owing to the need for economy.

Industrial Section.—The work in this section is progressing satisfactorily. Netting has been introduced as a new industry for the blind girls.

All the Boys' Industrial Departments have now been moved from Ratmalana to Kotte. Poultry-keeping and gardening are developing as useful industries.

A few of the industrial girls and boys are employed in the Ratmalana school as Matrons and compound workers.

The after care of the industrial workers is still a serious problem. Each year boys and girls must pass on from the school into the Industrial Department and it is difficult to find work outside the school for any of our industrial workers.

Orphanages.—Educational facilities are provided for orphans or destitute children. A maintenance grant of Rs. 75 is paid to the manager of an approved Orphanage or Home on account of each orphan or destitute child who is between the ages of 5 and 15 (in an Assisted Vernacular school) / 5 and 17 (in an Assisted English school) at the beginning of the school year and who has been in residence at an Orphanage or Home for a period of not less than 9 months and has regularly attended a registered school during this period. Such grants during 1938 amounted to Rs. 169,478·75.

Reformatory.—There is only one reformatory school to which juvenile offenders are admitted. Here they are taught different trades such as gardening, carpentry, tailoring, cooking, bookbinding, ironwork, printing weaving, &c., while undergoing their term of punishment. One hundred and eleven juvenile offenders were admitted during the year bringing the total to 247.

Prisoners.—There are schools for prisoners at the two jails in the Colombo District. There are 23 pupils at Mahara and 33 pupils at Welikada. Social workers conduct English classes for certain prisoners at the latter jail. The jail school at Kandy has 1 pupil.

Lepers.—There are two schools for lepers: one at Hendala and the other at Mantivu which are conducted by the Sisters of the Franciscan Order. The school at Hendala consists of three sections, *i.e.*, English, Tamil, and Sinhalese containing 35, 21, and 22 pupils respectively. The ages of the pupils range from 5 to 44. The average attendance is 51. The Mantivu Leper School, also consisting of 3 sections, has 8 pupils in the English section, 12 in the Sinhalese, and 15 in the Tamil.

The Langdon Home.—In Badulla District there is one institution which receives assistance from Government for training women in industrial work and household management. After a period of training, these women go into the villages and teach the older girls reading, writing, sewing, embroidery, and lacemaking. They also give instruction in the art of clean and efficient housekeeping and also encourage the practice of thrift.

Pensions, &c.—The posts of Government teachers are pensionable and in addition they make contributions to a Widows' and Orphans' Pension Scheme. Teachers in assisted school are eligible for a pension similar to that of Government teachers, but the pension scheme in assisted schools is on a contributory basis.

THE CEYLON UNIVERSITY COLLEGE.

The University College was established in 1921 for the purpose of affording facilities for higher education to students in Ceylon.

Numbers.—The number of students on the roll in July, 1938, the beginning of the academic year, 1938–39, was 664, including 66 women students. The figures for 1921–37 were as follows :—

1921	..	166	1927	..	279	1933	..	417
1922	..	217	1928	..	315	1934	..	449
1923	..	262	1929	..	338	1935	..	539
1924	..	262	1930	..	394	1936	..	541
1925	..	256	1931	..	355	1937	..	586
1926	..	313	1932	..	377			

Courses.—The College offers instruction in Latin, Greek, Sanskrit, Pali, English, Sinhalese, Tamil, Logic, Philosophy, History, Geography, Economics, Pure Mathematics Applied Mathematics. Physics, Chemistry, Botany, and Zoology.

Honours courses are provided in Classics, English, Indo-Aryan (Sanskrit and Pali), Sinhalese, Tamil, History, Mathematics, Chemistry, Botany, Zoology, and Physics.

The College course is normally one of three years. At the end of the first year students take the (External) Intermediate Arts, Science, and Economics examinations of the University of London conducted in Ceylon. At the end of the third year they take the final examinations for the B.A. (General), B.A. (Honours), B.Sc. (General), and B.Sc. (Special) Degrees of the same University.

The College provides also a two-year course for Diplomas in Sinhalese and Tamil to students who have already passed the London Intermediate Examination in Arts. The course is of Honours degree standard.

Students who intended to join the medical profession are given one year's course of instruction in Physics, Chemistry, and General Biology, at the end of which they take either the First M.B. Examination of the University of London or the Pre-Medical Examination of the Ceylon Medical College, or both.

Graduates.—On the results of the examinations held in June, 1938, 37 candidates qualified themselves for the B.A. and B.Sc. degrees of the University of London.

The total number of graduates from the University College from the time of its inception in 1921 is 448, of whom 30 obtained Honours in Classics, 16 in English, 40 in History, 46 in Mathematics, 17 in Indo-Aryan, 7 in Physics, 21 in Chemistry, 6 in Botany, and 5 in Zoology.

Government University Scholarships.—Four scholarships (annual value £300–£360) tenable for three years are awarded annually on the results of the London B.A. (Honours) and B.Sc. (Special) examinations to the students of the University College for the purpose of prosecuting their studies at a University in the United Kingdom.

Hostels.—Most of the students not living with their parents or relations are residing in four hostels affiliated to the College and subject to the College rules and regulations. These hostels are administered by extra-university bodies and are subsidized by the Government.

University College Council.—This Council, which consists of twenty members nominated by His Excellency the Governor, advises the Principal of the College in matters realting to the administration of the College, and the preparation for its conversion into a University.

THE CEYLON MEDICAL COLLEGE.

The Ceylon Medical College was established in 1870 in the form of a medical school capable of affording a practical education on the principles of medicine and surgery, and especially midwifery, together

with a practical knowledge of Anatomy, Physiology, Materia Medica, Pharmaceutical Chemistry, and the art of dispensing. It had originally a Principal and three lecturers, and the whole course took only three years.

This course was later increased from time to time in order to keep abreast with the progress of medical science. In 1887 recognition was granted by the General Medical Council of the United Kingdom, and the diploma became registrable in Great Britain and all parts of the Empire.

In 1924 the complete extended curriculum of one year's pre-medical study (Chemistry, Physics, Biology) and five years' medical study was adopted.

The College now provides the complete course of instruction required for the practice of modern Medicine, Surgery, and Midwifery. Including the course of preliminary or pre-registration work in Physics, Chemistry, and Biology, which is provided by arrangement at the University College, Colombo, the whole course takes six years.

In addition to the complete medical curriculum, the College provides a course of instruction for a minor grade of medical practitioners, known as Apothecaries. These receive a two years' course of instruction in Anatomy, Physiology, Chemistry, Pharmacy, Pharmacology and Dispensing, Elementary Medicine, Surgery, and Midwifery, both theoretical and clinical and Surgical Dressing, and in Hygiene and Public Health. Since October 1, 1937, candidates are admitted only on passing the Apothecaries Entrance Examination. Those gaining the first 20 places in order of merit are admitted to the Apothecaries course of 2 years for which they each pay Rs. 25 a term as College fees. The free course of instruction has been abolished. On passing the two Apothecaries' Examinations they are employed by the Government to take charge of the Government Dispensaries and some small hospitals in the remote rural areas and villages, but are only permitted to practise while so employed in Government service and are subject to the control of the District Medical Officers. They are eligible to be registered as Pharmacists.

These Apothecaries to a large extent provide for the medical treatment of the poor villagers in remote districts and where fully qualified medical practitioners are not available.

A department for the training of pupil midwives had been added to the College. This work was formerly carried out by the Department of Medical and Sanitary Services, but from October 1, 1931, the teaching and examinations of pupils have been vested in the College Council. First and second class certificates of efficiency are conferred on successful candidates, who are then eligible to be registered as midwives. As this arrangement in practice proved difficult of administration it was discontinued from October 1, 1932. The College, however, continues to conduct the examinations for certificates of efficiency as midwives, the courses of instruction having been restored to the Department of Medical and Sanitary Services. The College thereby retains control of the standard of teaching.

The College is staffed by whole-time Professors, in Medicine, Surgery, Anatomy, Physiology, and Pathology, whole-time lectures in Anatomy Physiology and Pharmacology, and a large number of part-time lecturers, mostly drawn from the officers of the Department of Medical and Sanitary Services.

GALLE HARBOUR.

Details of staff, fees, courses of study, and rules for students, and the history of the College, are embodied in the annual calendar, copies of which are sent free to Medical Schools in Great Britain, principal Educational Institutions, and Government departments in the Island.

The Government set up in 1928 a Post-licentiate Scholarship (suspended for the time being), which is granted yearly to the best student of the final year who qualifies in the first class within the statutory period, to enable him to obtain British qualifications and also to pursue studies and research in some special subject. The value of the scholarship is £300 per annum.

A small number of students generally discontinue study in the Ceylon Medical College and go to the United Kingdom to complete their studies.

A Dental School attached to the College was established at the beginning of 1938. The school provides a two years' course of training with a view to granting the students following the course a licence to practice dental surgery. The present course is intended solely for medical post-graduates, and is arranged essentially on the lines of recognized British Dental Schools and in conformity with the requirements of the Dental Board of the United Kingdom.

It is intended later to give a full dental curriculum for students not already possessing a medical qualification.

THE LAW COLLEGE.

The Law College which is controlled by the Incorporated Council of Legal Education exists for the supervision and control of the legal education of students desiring to qualify themselves as advocates or proctors of the Supreme Court. The Council consists of the Judges, the Attorney-General, the Solicitor-General, and such other persons of standing in the legal profession as the Judges may appoint. The members hold office for three years at a time. The academic qualifications requisite for admission in the case of advocates are (1) a degree in Arts or Science of any University in the British Empire, (2) a pass in the Intermediate Examination in Arts or Science of the University of London, and in the case of proctors (1) a degree in Arts or Science of any University in the British Empire, (2) a pass in the Matriculation Examination of the University of London or the Intermediate Examination in Arts or Science of any Indian University, or the Senior Local Examination, of the University of Cambridge, or the Cambridge Senior School-Leaving Certificate, provided always that the candidate shall adduce proof that he has passed an examination in English and Latin, such examination being either the examination on which he relies for his qualification or some one or other of the aforesaid examinations of any University in the British Empire.

Admission to the Law College takes place in the month of September and the number of students admitted during the year 1938 were :—

For the Advocate's course	8
For the Proctor's course	27

The staff consists of 14 lecturers appointed to hold office for a period of 3 years at a time, and a Principal.

The examinations provided for by the Rules of the Incorporated Council of Legal Education are held in the months of December and

July, the examiners being appointed annually. The number of candidates who in 1938 entered for these examinations, and the number successful therein were as follows :—

	Entered.	Passed.
Examinations for the Admission of Advocates	80	46
Examinations for the Admission of Proctors	364	164

CHAPTER XI.

Communications and Transport.

SHIPPING.

Colombo Harbour.

Introduction.—The position of Colombo at the junction of the most important trade routes in the East makes it an important port in the commerce of the East, and this natural advantage has been enhanced by the excellent facilities for docking, bunkering, loading and unloading cargo, water supply, &c., afforded by the port to the vast tonnage of shipping navigating Eastern waters. The port of Colombo has contributed largely to the commercial and economic prosperity of the Island, and this fact is borne out by the phenomenal growth of the city of Colombo since the conversion of the open roadstead into a great artificial harbour enclosed by extensive breakwaters. Colombo is a great *entrepot*, and the volume of business passing through its Customs houses is an indication of the state of trade and general prosperity of the Island.

Trade.—The quantity of imports and exports handled in the port of Colombo in 1938 amounted to 1,726,608 tons (1,086,949 tons imports and 639,659 tons exports), as compared with 1,756,880 tons (1,118,040 tons imports and 638,840 tons exports) handled in 1937. There has been a decrease of 30,272 tons as compared with the previous year.

Harbour.—The harbour is enclosed on all sides, being bounded on the south and east by the land and on the north and west by massive breakwaters. The approach to the harbour is free from navigational dangers. Vessels drawing 34 feet can enter by the Western entrance and vessels drawing 29 feet can enter by the Northern entrance. The Western entrance channel is 630 feet wide, with a navigable depth of 36 feet L. W. O. S. T., and the northern entrance channel 550 feet wide, with a navigable depth of 30 feet L. W. O. S. T. The sheltered area of the harbour amounts to 643 acres at low water, of which 246 acres have been dredged to 36 feet and over 140 acres to a depth varying between 36 feet and 34 feet, and 106 acres to between 33 feet and 30 feet ; the remaining 151 acres have a depth of less than 30 feet.

Accommodation for Vessels.—Berthing accommodation, exclusive of the Graving Dock, Guide Pier, and Oil Jetties, is available for 35 vessels in the north-east monsoon and 38 vessels in the south-west monsoon. Berths are available in either monsoon for vessels drawing up to 34 feet of water. One of these berths is for vessels of unlimited length.

Railways.—A broad gauge railway runs through the port premises and is connected with the main railway system of the Island, thus affording direct communication with all parts of the Island and Southern

India. Sidings are provided at different places on the waterside. The length of the railway is 6 miles 19 chains, but the total mileage of railway used, including sidings, &c., is 14⅝ miles. The port railway is available only for the conveyance of goods, the tonnage of goods handled during 1938 being 240,200 tons as against 233,198 in 1937.

Roads.—Communication by road to the harbour is excellent.

Canals.—The Lake to Harbour canal affords direct water transport between stores and mills situated on the lakeside and the harbour. It is navigable by fully loaded 40-ton harbour barges and to some extent relieves the congestion on roads. This canal, together with the lock basin and locks and the water area of the Beira Lake including the San Sebastian canal locks, is now included in the limits of the port of Colombo.

The total number of lighters, launches, &c., which passed through the Lake to Harbour canal during the year was 8,988 against 8,798 in 1937 and 7,720 in 1936.

Lakeside Facilities.

The development of the Lakeside Barge Yards, comprising the portion of land bordering on the Beira Lake, has opened up for commercial purposes a valuable stretch of land on the water front of the lake, and has relieved the congestion in the harbour by affording facilities for the reception of a number of boats which had hitherto been moored in the harbour. There is every indication, that, when trade improves, there will be an increasing demand for land on the lakeside which by its propinquity to the harbour and easy access thereto, both by land and water, affords a valuable venue for commercial purposes.

The Beira Lake is now an integral part of the port, and its progressive development will eventually lead to the establishment of a Commercial Zone in the vicinity of the port serving as a feeder to the business of the port and fostering its development.

Passenger Jetty.—The baggage office has good accommodation and examination halls. There is a staff always on duty day and night, and baggage landed with passengers is passed without delay. There is also provision for the storage of such baggage as a passenger may wish to leave in the premises, a small storage rent being payable. Accommodation is also provided at the Customs house at the Passenger Jetty for a Railway Booking inquiry Office and a Post Office. The Passenger Traffic during the year shows a decrease, the total number being 288,026, against 295,888 in the preceding year.

Landing and Shipping.—Landing and shipping of cargo is assisted by an efficient crane service. There is a total quayage of 15,657 lineal feet. The following are the particulars of cranes available at the port :—

Electric cranes	..	14	Hand derrick	..	1
Steam cranes	..	22	Steam derrick	..	1
Hand cranes	..	13	Mobile crane	..	1
Elephant hand crane	..	1	Steam jib crane	..	1
Floating cranes	..	2	Steam block loading titan		1

operating on the jetties and quays. The largest lift which can be made is 35 tons. The conveyance of cargo from the vessel to the wharf is done by lighters and is carried out by recognized stevedores and landing companies.

Cargo for shipment is brought down to the warehouse by cart, lorry, train, or barge. The Port Commission railway runs direct into the premises alongside three of the export warehouses. With regard to shipment, the same considerations apply as in the case of imports, some firms finding it more convenient to employ a clearing or shipping agency than to maintain their own staff. As in the case of import cargo, goods remain in the Government warehouse at the risk of the exporter. To suit the convenience of shippers who do not carry out their own shipments, landing and shipping companies are prepared to take over cargo at the shipper's stores for removal to the warehouse in the Company's own lorries. Export harbour dues are payable in all goods sent down to the warehouses or wharf. If they lie there for more than three clear days, further dues are payable for each day, and in addition a similar sum by way of warehouse rent. Cargo is taken to the vessel by means of lighters. A good supply of labour is available.

Warehouse Accommodation.—As goods discharged are not always directly transferred to some other means of conveyance, it has been found necessary to provide extensive warehouse accommodation for the increasing volume of goods demanding storage, pending shipment or removal from the premises. There is a total warehouse floor area of 568,786 square feet in the port for dealing with imports, exports, and transhipment cargo. Most of the warehouses have railway facilities and cranes are available where required.

The import warehouses are situated between the root of the South-west Breakwater and the Lake to Harbour canal. Other import warehouses and landing areas are also situated on either side of the canal, and these are largely used for the landing of rough cargo, such as timber and metal. Further north, three recently built warehouses are available at Kochchikade, where facilities are provided for transport by rail.

Five commodious warehouses are allotted for the accommodation of export cargo, in addition to an open shed used for the shipment of drums containing coconut oil and similar commodities, and another shed for rough cargo. The largest warehouse can accommodate 4,000 tons of tea packed in chests of the usual size. The other four warehouses can each accommodate from 2,500 to 3,000 tons.

There are several bonded warehouses within the Customs premises, and certain firms have their own bonded warehouses outside the premises. Goods may be bonded for any period up to two years, after which they must either be removed or rebonded. All goods placed in bond are liable to the same rent and harbour dues as in the case of import cargo up to the time of bonding, after which no further dues are payable and bonded warehouse rent is recovered, the amount payable per week on bonded goods being the same as the charge per day on import cargo. No rent is payable to the Customs in the case of goods which lie in bonded warehouses belonging to private firms, though a charge is made for Customs supervision of deposits and removals.

Several firms have their own warehouses and stores on the lakeside, which have direct access from the harbour through the canal and locks. Special facilities are given by the Customs for import cargo to be removed direct to these stores and, conversely, for the direct shipment of export cargo from these stores to the vessel. Rent and dues are, however, payable as in the case of goods landed in the warehouse, but the advantage of this direct traffic lies in obviating two additional handlings which would be necessary had the goods been landed or shipped from a quay.

Transhipment warehouses are available for the accommodation of cargo pending transmission to the destination. No import duty is payable upon such cargo, and rent and harbour dues are payable at a reduced rate, amounting to 1/5th of the rate payable upon ordinary import cargo. In the case of direct transhipment from vessel to vessel, a small fee is payable for Customs supervision. The volume of transhipment is fairly large, the quantity transhipped during the year being about 85,633 tons, but there is a steady traffic with Tuticorin and other South Indian ports of transhipment of cargo to and from the United Kingdom, America, Australia, the Far East, &c.

Removal of Cargo.—Goods may be cleared either by the importer himself or by any landing company or recognized clearing agency. Firms who import on a large scale find it convenient to keep their own staff of wharf clerks for the clearing of cargo and the passing of the necessary entries through the Customs. On the other hand firms whose business is not so great as to justify the maintenance of such a staff, find it more convenient to clear their goods through a Landing Company, or a Clearing Agency.

Warehouse rent and harbour dues are payable upon all goods landed at the wharf, and three clear days are allowed for the removal of the goods, exclusive of Customs holidays, of which there are five in the year, and Sundays. On goods removed after the expiry of this period further rent and dues are payable in respect of each day inclusive of Sundays and Customs holidays. Special facilities are offered by the Customs for clearing goods prior to the passing of the entry and the payment of the duty, rent, and dues. The usual system is to place a cash deposit with the Customs, against which goods are removed after any examination found necessary, the importer guaranteeing to pass the necessary papers within a reasonable period. Special facilities are also given for the clearing of perishable goods and of consignments, such as rice and sugar, which are landed in large quantities at a time.

Coaling Facilities.—There are about 29 acres of land on the foreshore of the harbour, half of which is leased to different companies for the stacking of coal. The coaling grounds between the Barge Repairing Basin and the Graving Dock have 17 coaling jetties. Large supplies of coal can be procured, and steamers are bunkered with good despatch at any hour of the day or night.

The types and approximate prices of coal stocked at Colombo for commercial purposes are as follows (December, 1938) :—

Type.	Price Trimmed (t.i.b.) Per Ton. s.	d.
Welsh coal (Admiralty quality)	43	3
Natal coal	34	0
Indian coal	34	0

The quantities of coal imported and issued for bunkers during the years 1937 and 1938 were as follows :—

	1937. Tons.	1938. Tons.
Imports	570,599	383,454
Bunkers	324,585	224,672

Oil Facilities.—The port is equipped with an up-to-date oil fuel installation which provides for the rapid bunkering of ships using oil fuel. The main Oil Installation Depot, about 92 acres in extent, is

situated at Kolonnawa, about 3½ miles from the harbour front, and various oil companies have erected their own storage and distribution tanks there. This depot is divided into a non-dangerous and a dangerous oil section and is separated by a safety reservation. Three main pipelines are laid connecting the discharge berth in the harbour with the main oil depot, two for oil fuel and the other for kerosene and petrol. In connection with the bunkering of vessels, a measuring tanks depot, about 19 acres in extent, has been established at Bloemendahl, about ¾ of a mile from the harbour front, and branch pipelines are provided from Kolonnawa to Bloemendahl and from Bloemendahl to the bunkering berths. The oil depot is also connected to the main railway system of the Island. Three reinforced concrete jetties, two for bunkering purposes and one for discharge of oil tankers, have been provided. The outer oil bunkering jetty is capable of accommodating vessels of 500 feet length and 26 feet draught. The inner bunkering jetty is used by barges for bunkering. Vessels of 500 feet length and 27 feet draught can be berthed at the discharge jetty where the latest facilities for discharging oil ships are provided, and vessels of deeper draught up to 29 feet are accommodated at the Graving Dock Guide Pier.

The imports of oil during the last two years were as follows :—

	1937. Tons.	1938. Tons.
Liquid fuel	313,942 ..	418,991
Kerosene oil	29,467 ..	26,705
Petrol and benzine	44,814 ..	34,777
Total ..	388,223	480,473

The quantities of liquid fuel issued for bunkers during the last two years were as follows :—

	No. of Ships Bunkered.	Tons.
1937	566 ..	266,670
1938	692 ..	371,390

There has been a decrease in the number of oil burning vessels calling at the port, while those burning coal have increased.

The Oil Facilities receipts during the year 1938 were Rs. 1,217,588·46, as compared with Rs. 996,545·96 in 1937.

Graving Dock.—Length of floor, 694 feet 7½ inches ; breadth of entrance-cope level, 85 feet ; depth over sill at low water, 30 feet ; depth over sill at high water, 32 feet. Docking can be carried out by day or night. The Inner Graving Dock, 350 feet long, entrance width 54 feet with a depth of 20 feet " at sill " was completed in July, 1938. This is an extension of the Outer Graving Dock.

Both docks are founded on solid rock, the outer being closed by a ship shaped Caisson, berthed alongside the south jetty when dock is open, the inner dock being shut off from the main dock by a " Box " flap gate, hinged along the sill and operated by a hydraulic winch.

The main pumping station on the North side of the main dock entrance is equipped with main steam driven centrifugal pumps capable of emptying the dock in less than 4 hours and is further equipped with drainage pumps, salt water pumps, electric generator for both 110 and 220 D.C.

andronicus pu

Copyright Photograph. *Chitrafoto.*

CLOCK TOWER.

current air compressor and hydraulic pumps for operating penstocks and capstan—compressed air, salt and fresh water mains and electric supplies being available in both docks.

Patent Slip.—Length, 800 feet ; length of cradle, 220 feet ; breadth of cradle, 40 feet ; depth over keel blocks at lower end at low water, 21 feet 6 inches ; depth over keel blocks at upper end at low water, 10 feet 6 inches ; inclination 1 in 20. Capable of slipping a vessel of 1,200 tons dead weight.

Ambulance Facilities.—An ambulance launch is available for the conveyance of sick and injured persons between ship and shore. The Colombo Municipal Council provides an adequate and efficient motor ambulance service for the port.

Quarantine.—On entering the harbour each ship is visited by the Port Health Officer or his Assistant, and no person is allowed to board the ship or leave the ship till pratique is granted. If there are cases of infectious diseases on board, such as plague, cholera, smallpox, yellow fever, or typhus, the ship is held in strict quarantine until all necessary measures such as removal of the sick person, disinfection of the ship, vaccination, &c., as the case may be, are carried out. Thereafter the ship is allowed to be worked in restricted quarantine, any persons having business on board being allowed on special permits.

Port Commission.—The Colombo Port Commission is composed of the following :—The Principal Collector of Customs (who is Chairman or Chief Port Commissioner) ; the Director of Medical and Sanitary Services ; the General Manager of the Railway ; the Mayor of Colombo ; the Deputy Collector of Customs ; the Master Attendant, Colombo and Galle ; the Harbour Engineer ; six Unofficial Members to represent Import, Export, Shipping, Coaling, Oil, and Landing Agencies' Interests ; two Unofficial Members nominated by His Excellency the Governor to represent Ceylonese interests.

RAILWAYS.

All the railways in Ceylon are State-owned and Government-controlled, the management being vested in the Ceylon Government Railway Department.

The total length of line open is 951 miles, of which 834 miles are broad gauge (5½ feet gauge) and 117 miles narrow gauge (2½ feet gauge).

The frontispiece map shows how the different lines radiate from Colombo.

The following table shows the distance from Colombo Fort to the more important stations on the different lines, with the first class return passenger fare and the approximate time of journey :—

Col. Fort. To—	Distance. M. C.	Train Fare (Return). Rs. c.	Approx. Time of Journey. Hours.	Col. Fort. To—	Distance. M. C.	Train Fare (Return). Rs. c.	Approx. Time of Journey. Hours.
Peradeniya	71 62	7 60	3*	Polonnaruwa	162 1	17 10	7¼*

* By express trains.

The main results of the working of the Ceylon Government Railway for the financial years 1933–34 to 1937–38 are shown in the following table :—

Particulars.	1933–34. Rs.	1934–35. Rs.	1935–36. Rs.	1936–37. Rs.	1937–38. Rs.
Total capital outlay	227,005,002	227,500,606	227,804,742	228,015,601	228,123,009
Gross earnings	20,980,422	18,273,081	16,749,221	16,304,611	16,128,529
Total working expenses*	18,943,156	18,911,326	19,587,815	20,355,043	20,268,060
Net revenue†	2,037,266	Loss 638,245	Loss 2,838,594	Loss 4,050,432	Loss 4,139,531
Percentage of net revenue on total capital outlay	·90 p.c.	—	—	—	—
	Rs.	Rs.	Rs.	Rs.	Rs.
Gross receipts from ordinary passenger and season tickets	7,941,378	6,547,579	5,917,331	5,943,769	6,060,079
Gross receipts from parcels, goods, &c.	13,039,044	11,725,502	10,831,890	10,360,842	10,068,450
Free traffic (excluding that for Railway Department included in gross receipts)	Nil	Nil	Nil	Nil	Nil

The number of passengers conveyed has increased by 1,353,414, the total conveyed during the year being 10,859,072. Under Season Tickets the number of ticket holders has decreased by 907, the total number of season tickets issued during the year being 194,717.

The number of parcels conveyed during the year was 1,115,163 or a decrease of 16,502.

The tonnage of merchandise carried was 907,116 or an increase of 11,018 tons, the noticeable increases and decreases being :—

	Increase. Tons.	Decrease. Tons.
Agricultural produce	—	6,093
Coconut produce (other than copra)	—	975
Common bricks and tiles	—	162
Copra	9,386	—
Kerosene oil and bulk petroleum	—	558
Liquid fuel	1,117	—
Manure	—	2,211
Packing for tea, rubber, and desiccated coconut	1,005	—
Petrol	1,003	—
Rice	5,490	—
Rubber	—	478
Salt	2,103	—
Sundry goods	4,084	—
Tea	7,521	—
Foreign Traffic	—	6,241
Special Train Traffic	—	4,028

Passenger Fares.

Fares.—(*a*) The fare charged in respect of each passenger for each mile of a single journey shall be as follows :—

		First Class. Cents.	Second Class. Cents.	Third Class. Cents.
(i.) On the Main Line from Nawalapitiya to Badulla and on the Uda-Pussellawa Line		10½	7	2½
(ii.) On the Kelani Valley Line	First 20 miles of a journey	7	4⅔	2½
	Beyond 20 miles	5½	3½	1½
(iii.) On the Puttalam and Coast Lines and on the Maradana-Ragama portion of the Main Line	First 25 miles of a journey	7	4⅔	2½
	Beyond 25 miles	6	3¾	1½
(iv.) On any other line		7	4⅔	2½

* Includes provision for renewals.
† That is, " Gross earnings " less " Total working expenses ".

Provided that in the case of a single journey from any station on the Kelani Valley Line to any station on the Puttalam or Coast Line or the Maradana-Ragama portion of the Main Line, the fare charged in respect of each passenger for each mile shall be as follows :—

	First Class. Cents.	Second Class. Cents.	Third Class. Cents.
(i.) First 20 miles of the journey	7	4⅔	2½
(ii.) Any part of the journey beyond the first 20 miles, if done on the Kelani Valley Line	5½	3½	1½
(iii.) Any part of the journey beyond the first 20 miles, if done on the Puttalam or Coast Line or on the Maradana-Ragama Portion of the Main Line	6	3¾	1½

Provided, further, that in the case of a single journey from any station on the Puttalam or Coast Line or on the Maradana-Ragama portion of the Main Line to any station on the Kelani Valley Line, the fare charged in respect of each passenger for each mile shall be as follows :—

	First Class. Cents.	Second Class. Cents.	Third Class. Cents.
(i.) First 25 miles of the journey	7	4⅔	2½
(ii.) Any part of the journey beyond the first 25 miles, if done on the Puttalam or Coast Line or the Maradana-Ragama portion of the Main Line	6	3¾	1½
(iii.) Any part of the journey beyond the first 25 miles, if done on the Kelani Valley Line	5½	3½	1½

(*b*) In calculating the fare for a single journey between any two stations, any fractional part of 5 cents which is below 2½ cents shall not be reckoned or charged for, and every fractional part of 5 cents equal to or above 2½ cents shall be reckoned and charged for as 5 cents :

Provided, however, that—

(i.) where the distance between the stations is one mile or less the 3rd class fare shall be 3 cents ;

(ii). where a journey on the Kelani Valley Line extends beyond 20 miles or where a journey on the Puttalam and Coast Lines and the Maradana-Ragama portion of the Main Line extends beyond 25 miles, every fractional part of a cent shall be reckoned and charged for as one cent.

(*c*) A return journey between any two stations shall be charged for at one and a half times the fare for a single journey between those two stations.

(*d*) In calculating the fare for a return journey, any fractional part of 5 cents which is below 2½ cents shall not be reckoned or charged for and every fractional part of 5 cents equal to or above 2½ cents shall be reckoned and charged for as 5 cents.

Week-end tickets are issued between all stations distance 25 miles and over at 1⅓ single fares for the double journey. Reductions are made for children, pioneers, and labourers of any nationality, and for periodical tickets.

Sleeping Cars.

The sleeping cars which run on the Up and Down night mail trains between Colombo, Kandy, and Badulla, Colombo-Kankesanturai, Colombo-Trincomalee, and Colombo-Batticaloa are provided with sleeping accommodation. Each berth is numbered and provided with bedding and an attendant accompanies each car. The charge for a sleeping berth is Rs. 5 in addition to the ordinary first class fare to the station to which the journey is made.

In the Indo-Ceylon mail trains sleeping berths without bedding are provided for through first-class passengers without any extra charge, but berths are not guaranteed unless they have been reserved, for which a registration fee of Re. 1 per berth will be charged. If bedding is required Rs. 5 must be paid for each set of bedding at the time of booking, and a berth will be made up as a bed by the Car Attendant. In such cases no registration fee will be charged.

Sleeping berths without bedding are provided for second class passengers on the Colombo-Kankesanturai Up and Down night mail trains at Rs. 2·50 each and on the Colombo-Talaimannar Pier Up and Down night mail trains at Re. ½ each for through Indo-Ceylon passengers.

Return sleeping berth tickets at Rs. 6 each first class, and Rs. 3 each second class are issued to holders of week-end, ordinary return, and excursion tickets.

Restaurant Cars.

These are attached to the important trains on the Main and Northern lines.

Restaurant Rooms.

These are provided at Maradana, Polgahawela, and Nanu-oya on the Main line, Colombo Fort and Alutgama on the Coast line, and Anuradhapura on the Northern line. Refreshments at these places are supplied at moderate prices.

Refreshment Baskets.

Refreshment baskets can be supplied for any train from Colombo on giving 20 minutes' notice to the Manager, Restaurant Cars and Rooms, at his office at Colombo Fort Station.

Luggage.

Each adult passenger is allowed, free of charge, the following weight of luggage :—

	lb.		lb.
First class	112	Third class	70
Second class	84		

A free allowance of half these quantities is made for each child travelling with a half-ticket. No luggage will be conveyed free for children under three years of age who travel free.

The Diesel Units commenced running on the Coast Line from March 14, 1938, and are proving very popular.

ROADS.

There are over 17,500 miles of roads and cart tracks in the Island controlled and administered by the following authorities :—

Authority.	Description of Roads.	Approximate Mileage.
(i.) Public Works Department ..	All main thoroughfares in the Island ..	5,427
(ii.) District Road Committees ..	All minor roads within the areas of jurisdiction of each Committee ..	4,370
(iii.) Local Governing Authorities, viz., Municipalities, Urban District Councils, Local Boards, Sanitary Boards, &c. ..	All streets within their respective jurisdictions	750
(iv.) Village Committees	All natural cart tracks within the jurisdiction of each Committee ..	7,500
(v.) Irrigation Department	— ..	70
(vi.) Private Parties	— ..	350

In addition there are approximately 8,200 miles of bridle paths in the charge of the District and Village Committees.

The Public Works Department is the principal road authority in the Island and is responsible for the construction and maintenance of all the "Main roads", by which are meant through arteries connecting the principal centres of populations with one another and with the railways and ports.

The whole cost of construction, improvements, and maintenance of these roads is met from the general revenue of the Island.

The roads vary in standard from narrow country roads to wide modern thoroughfares, the standard depending on the nature of the country traversed and the traffic carried.

The following is the classification of the Public Works Department roads according to the nature of their surfaces :—

	Miles.
Full-metalled	4,485
Track-metalled	303
Gravelled	493
Natural	146
	5,427

The metalled roads are maintained in good order, and, with but few exceptions may be considered passable to all classes of traffic. Gravelled roads can be considered as dry weather roads only ; in dry weather they are generally in fair order, but they cannot be relied upon to the extent of metalled roads. A large mileage of the metalled roads is tarred or otherwise surface-treated. At the end of 1938 the length of roads so treated was 4,406 miles.

The only direct charge on road users is that for the use of ferry boats, but on the main roads with a few exceptions the ferries have been replaced by bridges. Indirect charges are made in the form of import duties and taxes on wheeled vehicles.

The distribution of the main roads, distances between the principal centres, &c., can be ascertained on reference to the motor map of Ceylon, obtainable from the Surveyor-General, Colombo.

The distances from Colombo to other chief towns by road (given to the nearest half mile) are shown in the following list :—

Colombo to—	Miles.	Colombo to—	Miles.
Galle	72½	Batticaloa (*via* Badulla) ..	241
Peradeniya	68	Anuradhapura (*via* Matale) ..	158½
Kandy	72	Trincomalee (*via* Kurunegala)	169
Nuwara Eliya (*via* Peradeniya)	112	Anuradhapura (*via* Puttalam) ..	129
Nuwara Eliya (*via* Ginigathena)	106½	Jaffna (*via* Puttalam) ..	250

MEANS OF TRANSPORT BY ROAD.

The number of motor vehicles in Ceylon on December 31, 1930, was 24,405 ; it decreased during the years of depression to 23,359 on December 31, 1933. Owing to the revival of trade generally throughout the Island since 1934 there has been a steady increase in the number of motor vehicles. On December 31, 1938, there were 31,231 motor vehicles in the Island.

The average cost of running a small private car may be put at about 25 to 40 cents per mile. Hiring cars are available in most parts of the Island and cost 40 cents to Re. 1 per mile.

Drivers and mechanics for privately-owned cars can be obtained without difficulty and all drivers must hold the Government Certificate of Competence, while many are registered with the Automobile Association of Ceylon. Numerous facilities for repairs exist in Colombo, Kandy, Nuwara Eliya, and most of the other towns. Supplies of petrol and oil are available in all towns and in most of the larger villages.

The Automobile Association of Ceylon is affiliated or has reciprocal agreements with most of the Automobile Associations and Clubs in other countries and the Secretary (P. O. Box 338, Colombo) will afford any information which may be desired. The various landing, Customs, and registration formalities can be arranged for visitors by the Association. Facilities afforded by the International Convention relative to motor traffic are now available to Ceylon and a Ceylon TRIPTYQUE for Customs purposes is available through the leading Automobile Institutions overseas. International Driving Permits, International Certificates of registration for Motor Vehicles, and Fiscal Permits are valid in Ceylon.

Motor Omnibuses.—There is a plentiful supply of motor omnibuses, known in England as road service vehicles, carrying passengers for hire and running on nearly every main road in the Island. The number of omnibuses in use during the year was 2,625.

On the recommendations of the Special Commission on Transport, whose report was made in May, 1937, legislation was enacted to introduce centralized control of road motor transport, including the routes served by omnibuses and lorries.

The seating accommodation for passengers in motor omnibuses varies from 8 to 37.

Personal luggage of small dimensions and light weight is carried free of charge. Extra luggage is carried on the roof of the conveyance on payment of a fee.

Goods.—The chief means of transport of goods by road are the motor lorry and the local bullock cart. A double-bullock cart is capable of taking 1½ tons at a time and travels at the average rate of about 2 miles an hour. The cost per ton per mile may be put at about 80 cents. In the year 1934 there were about 22,424 single and double-bullock carts in Ceylon, the majority of which were used in the transportation of village produce. Figures for 1938 are not available. Motor lorries are fast replacing bullock carts in the movement of estate goods and in other industries. Lorries vary in load capacity from 5 cwt. to 5½ tons and travel at a speed of about 15 to 20 miles per hour, 15 miles being the legal speed limit for heavy lorries. They run mostly on petrol, a small number on steam or kerosene, some on crude oil, and a very few on charcoal. In 1938 there were 4,320 motor lorries and vans in Ceylon. The running cost can be kept at as low as 50 cents per ton per mile. The Diesel oil engine vehicles have been slowly gaining in popularity. The number of Diesel vehicles in Ceylon on December 31, 1938, was 367, as against 321 on December 31, 1937, and 229 on December 31, 1936. As Diesel vehicles run on crude oil which is imported free of customs duty, a special tax on transport vehicles using uncustomed oil was imposed with effect from January 1, 1936, in order to recoup the resultant loss of revenue by way of import duty on petrol which would otherwise have been used on these vehicles. The present scale of this heavy oil tax is as follows:

Where the tare of the heavy oil motor vehicle—	Monthly Rate. Rs. c.
(*a*) does not exceed 1 ton	63 25
(*b*) exceeds 1 ton but does not exceed 1½ tons	69 0
(*c*) ,, 1½ ,, ,, 2 ,,	74 75
(*d*) ,, 2 ,, ,, 2½ ,,	80 50
(*e*) ,, 2½ ,, ,, 3 ,,	86 25
(*f*) ,, 3 ,, ,, 3½ ,,	92 0
(*g*) ,, 3½ ,, ,, 4 ,,	103 50
(*h*) ,, 4 ,, ,, 4½ ,,	115 0
(*i*) ,, 4½ ,, ,, 5 ,,	126 50
(*j*) ,, 5 ,, ...	138 0

THE SEA FROM THE RAMPARTS.

Tramways.—The only street tramways in Ceylon are those in the town of Colombo, the total length of double track being 7¼ miles. There are two nearly equal routes : one between the Fort and the Kelani river terminus, and one between the Fort and Borella, joined by across line between Maradana and Grandpass *via* Skinner's road and Armour street. The total number of passengers carried annually is estimated at about 13 millions.

CANALS.

The only artificial navigable waterways in Ceylon are a series of canals connecting a chain of lakes on the west coast—Bolgoda, Colombo, Negombo, Chilaw, Mundel, and Puttalam lakes—as also the estuaries of the Kalu-ganga, Kelani-ganga, Maha-oya, and Deduru-oya ; thus forming a continuous waterway from Kalutara in the south to Puttalam in the north, a distance of approximately 120 miles. These were maintained in good order.

In addition to the foregoing there are about 41 miles of boat channel maintained by dredging the Jaffna lagoon.

POSTAL, TELEGRAPH, AND TELEPHONE SERVICE.

(Full information on this subject is to be found in the "Ceylon Post Office Guide", obtainable from the Postmaster-General, Colombo, price 75 cents.)

On December 31, 1938, 964 offices were open for business. Details of the facilities afforded are as follows :—

190 Post Offices (excluding the Central Telegraph Office which does only telegraph business) dealt with all classes of postal business, viz., mail and parcel work, registration and insurance of postal articles, money order, postal order, and Savings Bank work, and telegraph and telephone business. Thirty-seven Post Offices dealt with all classes of business except telephone work. One Post Office conducted all classes of business except value-payable and cash-on-delivery work and telephone work. Seven Post Offices dealt with all classes of postal business except telegraph and telephone work.

64 Sub-Post Offices conducted all classes of postal business except insurance, and also provided telephone-telegraph facilities. 152 Sub-Post Offices also conducted such business except telephone-telegraph work.

477 Village Receiving Offices dealt with mail work only. At 35 Railway Stations facilities for the despatch and receipt of inland postal telegrams were available. At 9 of these stations, mail work was also conducted.

There are 10,052 miles of telegraph wire (including railway telegraph wires), of which 2,734 are laid underground, and 54,585 miles of telephone wire (including Trunk and Junction lines) for subscribers' circuits, of which 37,900 are laid underground (excluding private estate lines).

Air Mail Services.

Since Ceylon's participation in the Empire Air Mail Service, first class mails between Ceylon and other participating countries, except India, are sent by air as the normal means of transmission. The postage charged is 20 cents per ½ oz. for letters and 10 cents per postcard.

In the case of countries not participating in the Empire Air Mail Service, and also India, a "Surcharge" air service is afforded at varying rates of postage. To India, the "Surcharge" air mail rate is 12 cents per ½ oz. for letters, and 9 cents per postcard, inclusive of postage.

A "feeder" air service, operating five times a week in either direction, connects Colombo with the main trunk line of Imperial Airways at Karachi.

Sea Mail Services.

First and Second Class Mails.—A regular weekly mail service is maintained between Ceylon and the Continent of Europe. Regular and frequent services are available to China and Japan. Mails for India are despatched by train every day in the week, except on Saturdays.

Second Class Mails.—There is a regular weekly service between Ceylon and the United Kingdom and between Ceylon and Australia. Regular and frequent services are also available to the Straits Settlements and Federated Malay States. A direct service, not less than twice a month, operates between Ceylon and British East Africa and South Africa. Mails for Mauritius are despatched fortnightly *via* Batavia and by the direct service from Colombo to Mauritius operating at irregular intervals.

Rates of Postage.

Inland Rates and Rates to India.

	Cents.		Cents.
Letters, per 2 ounces or part of that weight	6	Registered newspapers not weighing more than 2 pounds, for every 8 ounces ..	2
Post cards, each	3		
Printed matter, per 2 ounces or part of that weight up to a maximum of 2 pounds ..	2		

Rates to the United Kingdom, British Possessions participating in the Empire Air Mail Service, and Egypt.

	Cents.		Cents.
Letters, per ½ ounce or part of that weight	20	Printed papers, per 2 ounces or part of that weight	3
Postcards, each	10		

Rates to Empire Countries not participating in the Empire Service.

	Cents.		Cents.
Letters, per every ounces ..	9	Printed papers, per every 2 ounces ..	3
Postcards, each	6		

Rates to Foreign Countries (excluding Egypt).

	Cents.		Cents.
Letters, for the first ounce ..	20	Postcards, each	12
Every additional ounce or part of that weight	10	Printed papers, per 2 ounces or part of that weight	4

Inland Cash-on-Delivery System.

Postal articles can be transmitted by the Inland post on the value-payable system provided that the amount payable is not less than 50 cents or more than Rs. 600. A posting and delivery fee of 5 to 15 cents, according to value, will be levied on every value-payable article.

Foreign Cash-on-Delivery system.

The Cash-on-delivery Service is in operation between Ceylon and the United Kingdom, the Straits Settlements, the Federated and Unfederated Malay States, Germany*, and Burma. Details will be found in the "Ceylon Post Office Guide".

Money Orders.

Money Orders can be obtained at any of the Post Offices payable at any of the others and in most foreign countries. The maximum for inland and Indian Money Orders is Rs. 600, for foreign orders £40 except in certain special cases where the maximum is below this amount. The rate of commission for inland Money Orders is 20 cents for each complete sum of Rs. 20 and 20 cents for the remainder, and for Burmese and Indian Money Orders 20 cents for each complete sum of Rs. 10 and 20 cents for the remainder. The rate for foreign Money Orders expressed in sterling is 25 cents on sums not exceeding £1, and on sums exceeding £1, 25 cents on the first £ and 20 cents on each complete additional sum of £1 and 20 cents on the remainder. Money Orders payable in the United Kingdom or countries served through the United Kingdom are despatched by Air Mail. Telegraph Money Orders can be despatched in the inland service. Telegraph Money Order service is also available to Burma, India, and some other foreign countries. A fixed fee of 10 cents irrespective of the amount of the order is charged for inland Burmese and Indian Telegraph Money Orders. There are fixed minima for Telegraph Money Orders according to the currency in which the order is advised. Details will be found in the "Ceylon Post Office Guide".

Postal Orders.

Inland Postal Orders for fixed amounts ranging from 50 cents to Rs. 10 are issued, the rate of commission varying from 5 to 10 cents.

British Postal Orders.

There are 40 denominations of British Postal Order, ranging from 6*d*. to 21*s*., the difference between each up to 19*s*. being 6*d*., and 1*s*., between 19*s*. and 21*s*. Commission is charged at the rate of 10 cents on each of the first five denominations, 15 cents on each of the next twenty-five, and 20 cents on each of the remaining denominations. A full list of the countries to which British Postal Orders can be sent is given in section IX. of the "Ceylon Post Office Guide". Broken amounts up to 5*d*. (but not including fractions of a penny) may be made by affixing unused Ceylon postage stamps of equivalent value or British penny postage stamps not exceeding two in number in the spaces provided on the order.

Inland Telegrams.

The minimum charge for Inland ordinary telegrams is 50 cents for the first twelve words, including the address, and 5 cents for each additional two words or less. These telegrams can be sent from any one telegraph office to any other in the Island.

The charge for Urgent telegrams is Re. 1 for the first twelve words, including the address, and 10 cents for each additional two words or less.

* The outward service with Germany is temporarily suspended.

Greetings and Condolence telegrams can be sent at reduced rates on such occasions as Christmas, New Year, Wesak, Hindu New Year, Id, Birthdays, Birth of a child, Weddings, and Funerals and Deaths. The text of such a telegram should be a phrase selected from the list of stock phrases appearing at the end of rule 543 of the Ceylon Post Office Guide. The entire text is counted as one word for the purpose of the collection of charges. The charges are 30 cents for each such telegram consisting of not more than six words and 5 cents for each additional word in the name and address of the addressee or of the sender. For fuller details, see the rule already quoted.

Foreign and Colonial Telegrams.

The rates for telegrams to India are express Rs. 2, and ordinary Re. 1 for the first 12 words or less, and 15 cents and 10 cents respectively for each additional word.

The rates for telegrams to Burma are 18 cents and 36 cents per word for ordinary and urgent with a minimum charge for 8 words rounded up to the next multiple of five cents.

Telegrams to other Empire Countries can be sent *via* Eastern at the following flat rate per word :—

Ordinary 85 cents, Code 57 cents (with a minimum charge for 5 words).
Deferred 45 cents (with a minimum charge for 5 words).
" Daily letter telegram " 30 cents (with a minimum for 25 words).

Telegrams to other foreign countries can be sent on a minimum charge per word varying from 65 cents to Rs. 3·65 for ordinary, and from 45 cents to Re. 1·85 for deferred telegrams according to the distance of the place of destination, the route by which the telegram is to be sent, &c. A full list of places to which foreign and Colonial telegrams can be sent, together with the rates charged, is given in section 11 of the " Ceylon Post Office Guide ".

Foreign Cheap Rate Telegrams.

Telegrams in plain language are accepted for transmission as " Night Letter Telegrams " or " Daily Letter Telegrams " to various places abroad at considerably reduced rates. A list of places to which this service is available, and the scale of charges will be found in section 11 of the " Ceylon Post Office Guide ".

Radio-Telegrams.

Radio-Telegrams are accepted at any Postal Telegraph Office in Ceylon for transmission to ships equipped with radio-telegraph apparatus through the Coast Station in Colombo. Radio-telegrams to His Britannic Majesty's Ships of War may also be sent through Matara Radio.

The charges are as follows :—

	Per Word. Cents.
British Indian, or Colonial Government telegrams to His Britannic Majesty's Ships of War *via* Colombo radio or *via* Matara Radio	Free
Private telegrams to His Britannic Majesty's Ships of War—	
Via Colombo Radio ..	40
Via Matara Radio	25
All other Government or private telegrams *Via* Colombo Radio only ..	65
On Radio Telegrams sent to—	
(*a*) Spanish and Swedish ships the charge is ..	60
(*b*) Finnish ships the charge is ..	50

Copyright Photograph. *Chitrafoto.*

DUTCH CHURCH.

The normal range of the Colombo Radio Station is 500 miles or about two days steaming from or to the port of Colombo, but this distance is considerably exceeded when conditions are favourable and also according to the equipment on board the ships.

With ships fitted with the Short Wave System, communication is possible for a few thousand miles. Ships not so fitted can be reached through those having the facility.

Telephone System.

Telephone communication exists between most of the principal towns and certain rural districts. The towns are generally served by Government exchanges and the rural districts by Government or private licensed exchanges which are connected to the general trunk system by means of Government trunk lines.

The charge for the use of a public call box for six minutes or less is 10 cents. The trunk rates are calculated as follows (for calls made between 8 P.M. and 8 A.M., half the rates are charged with a minimum of 20 cents) :—

		Rs. c.
For	3 miles or under	0 7
Over	3 miles and not exceeding 5 miles	0 10
Over	5 miles and not exceeding 7½ miles	0 15
Over	7½ miles and not exceeding 10 miles	0 20
Over	10 miles and not exceeding 15 miles	0 25
Over	15 miles and not exceeding 20 miles	0 30
Over	20 miles and not exceeding 30 miles	0 40
Over	30 miles and not exceeding 40 miles	0 50
Over	40 miles and not exceeding 50 miles	0 60
Over	50 miles and not exceeding 70 miles	0 80
Over	70 miles and not exceeding 90 miles	1 0
Over	90 miles and not exceeding 110 miles	1 20
Over	110 miles and not exceeding 150 miles	1 50
Over	150 miles and not exceeding 190 miles	1 80
	190 miles and over	2 0

The minimum annual rental for a telephone connection to a large town exchange is Rs. 180 for business or professional purposes and Rs. 120 for non-business or residential purposes and for a connection to a small town exchange Rs. 125 and Rs. 90 respectively.

Broadcasting Service.

The Government maintains a regular broadcasting service on a wave-length of 428·5 metres (700 KCS) with a transmitter radiating 5 K.W. situated in Colombo. Evening programmes are simultaneously broadcast on a shortwave wave-length of 48·7 metres (6,160 Kilocycles).

Programmes consisting of music, talks and news are broadcast in English, Sinhalese, and Tamil. Empire programmes from Daventry are relayed and broadcast almost daily.

The number of radio receiving licences in force at the end of 1938 was 6,007, as against 4,911 at the end of 1937.

There is a regular broadcast to schools conducted by the Department of Education.

CHAPTER XII.

Public Works.

Since the introduction in July, 1931, of the new Constitution for the Island under the Ceylon (State Council) Order in Council, 1931, the Public Works Department is placed under the immediate control of the Executive Committee of Communications and Works.

There was an increase of expenditure in 1938 on that of the previous years. The total expenditure by the department amounted to Rs. 11,800,099·70 as against Rs. 10,716,541·48 during the previous year (1936–37).

Maintenance.—The roads, bridges, canals and public buildings in charge of the department were maintained in satisfactory condition having regard to the funds available.

New Works.—The following are the more important works completed or in progress during the year :—

New Buildings and Additions and Improvements to Buildings.

Additions and Improvements to Government Stores, Colombo.
Quarters for 40 Married Sergeants and Constables, Slave Island.
Welikada Jail : improvements to water supply.
Cattle Quarantine Station, Colombo.
Additions to Government Dairy.
Repairs to proposed offices at premises occupied by Messrs. Brown & Co., at Chatham street, Colombo.
Bacteriological Institute, Colombo.
New Nurses' Home, General Hospital, Colombo.
New three-storey Ward, General Hospital, Colombo.
New Hospital, Kalutara.
Acquisition of land for Anti-Tuberculosis Hospital, Welisara.
Block of 12 rooms for Paying Patients, Lunatic Asylum, Angoda.
Second stage of extensions, De Soysa Lying-in Home, Colombo.
Building to house the Department of Pathology, Ceylon Medical College, Colombo.
Water Supply, Kandana Sanatorium.
Children's Ward, Kandana Sanatorium.
Extensions to Sisters' quarters, Hendala Leper Asylum.
Four light construction wards, Lunatic Asylum, Angoda.
Water Supply, Moratuwa Hospital.
Light construction Wards : 2 each at General Hospital, Colombo, and Anti-Tuberculosis Institute, Ragama, and 1 at Lady Ridgeway Hospital.
Laboratory and office accommodation for the Expert Adviser on Industries and his staff.
Model Coir Yarn Factory, Colombo.
Extensions to the Ceylon Technical College, Colombo.
Accommodation for the Telegraph Stores in the old Railway Workshops, Maradana.
Improvements to the new Council Chamber and Secretariat, Colombo.
New Type Store for Government Press, Colombo.
Installation of an electric pumping plant to the Residency, Kalutara.
Married quarters for Instructors, Police Training School, Bambalapitiya.
New Agricultural Station, Horana.
New Satin Wood Depot, Slave Island.
Cottage Hospital, Divulapitiya.
Cottage Hospital, Wellalawita.
Two Additional Wards, Moratuwa Hospital.

andronicus pu

Acquisition of land, Ragama Anti-Tuberculosis Hospital.
Extensions to the Anatomy Block, Medical College, Colombo.
Additions and Improvements to Leper Asylum, Hendala.
Improvements to Dental Institute, Colombo.
Workshop for Technical Adviser's Laboratory, Colombo.
Additions and alterations to Welikada Radio Station.
Extensions to Entomological Laboratory, Torrington Square, Colombo.
Light construction ward, De Soysa Lying-in Home, Colombo.
Light construction ward, Negombo.
Bungalow for the Director of Agriculture, Peradeniya.
Veterinary Department and Farm School, Peradeniya (Transfer and reorganization).
Rebuilding Kandy Hospital.
New Cottage Hospital, Ankumbura.
New Cottage Hospital, Pallegama.
Quarters for the Uniform Staff, Nuwara Eliya Post Office.
New Police Court, Gampola.
Improvements to "The Lodge" to be used as the residence of the Government Agent, Kandy.
Conversion of existing Ball Room, King's Pavilion, Kandy, into bed rooms.
Construction of Rubber Room and Smoke House, Experimental Station Peradeniya.
New Court-house for Additional District Court, Kandy.
Additions and Improvements to Agricultural Department buildings, Peradeniya.
Dambulla Hospital water supply scheme.
New Village Tribunal Court, Opata.
New roof for the Hambantota Residency.
New Store to Central Agricultural Station, Labuduwa.
New Hospital, Hambantota.
Cottage Hospital, Talawa.
Quarters for 2nd Apothecary, Elpitiya Hospital.
Maternity Ward, Balapitiya Hospital.
Light construction ward, Matara Hospital.
New District Court Building at Balapitiya.
New Village Tribunal Court, Hamantota District.
Renewing floor, Customs Office, Galle.
Lines for Game Watchers n the Resident Sportsmen's Reserve at Palatupana.
Quarters for Agricultural Instructor and for Foreman Paddy Seed Station, Ambalantota.
Seed Cotton Store (Cotton Purchase Depot) Rotation Station, Batataa
Quarters for officer-in-charge, Cattle Breeding Station, Karagoda-Uyangoda.
Renewal of floor of Education Office, Galle.
New Post Office, Matara.
New office for the District Engineer, P. W. D., Hambantota.
Improvements to Jaffna Customs.
Quarters for Jailer and Prison Apothecary, Jaffna.
Additional Ward, Delft Hospital.
V. D. Clinic, Jaffna Hospital.

blishing company, inc

Additions and Improvements to Training School, Kopay.
Improvements to Jetty at Nainativu.
Quarters for Excise Guards, Elephant Pass.
Maternity Ward, Chavakachcheri Hospital.
Extension to Chavakachcheri Hospital.
Maternity Ward, Point Pedro Hospital.
Additions and Improvements to Post Office buildings, Northern Province.
Maternity Ward, Mullaittivu Hospital.
New Cottage Hospital at Pungudutivu.
Ward for Tuberculosis cases, Jaffna Hospital.
District and Police Court buildings, Point Pedro.
Clerks' quarters, Vavuniya.
New Post Office and Postmaster's quarters, Vavuniya.
New Residency, Trincomalee.
Cottage Hospital, Muthur.
Cottage Hospital, Akkaraipattu.
New Office for the amalgamated offices of the Assistant Provincial Registrar and Registrar of Lands, Trincomalee.
Bungalow for Assistant Superintendent of Police, Trincomalee.
Quarters for Superintendent of Excise, Trincomalee.
Quarters for Excise Inspector, Trincomalee.
Extensions to Trincomalee Hospital.
Water Supply, Kalmunai Hospital.
Improvements to Kachcheri Chief Clerk's quarters, Trincomalee.
Additions and Improvements to Mantivu Leper Asylum.
New Court-house, Kurunegala.
Office, Store, &c., Telegraph Inspectors, Polgahawela.
Divisional Agricultural Station, Wariyapola.
Cottage Hospital, Mawatagama.
Maternity Ward, Ridigama Hospital.
Light construction ward, Kurunegala Hospital.
New Dispensary and Apothecary's quarters, Tabbowa.
Additions to Dambadeniya Hospital.
Light construction ward, Dandegamuwa Hospital.
Maternity Ward, Chilaw Hospital.
Cottage Hospital, Kahatagasdigiliya.
Cottage Hospital, Murunkan.
Village Tribunal Court, Kalawewa.
Village Tribunal Court, Yakkala.
Village Tribunal Court, Kibissa.
Quarters for staff, Government Rice Mill, Anuradhapura.
Extensions to Maternity Ward, Mannar Hospital.
Additions to Government Farm, Polonnaruwa.
Extension to Badulla Hospital.
Bandarawela Sanatorium (Extension to Glendale Bungalow).
Extension to office of Registrar of Lands, Badulla.
Permanent Lines for Forest Department labourers at Ohiya.
Construction of main drain, Survey Camp, Diyatalawa.
Maternity Ward, Aranayaka Hospital.
Light construction ward, Kegalla Hospital.
Three Clerks' quarters, Type No. 6, Avissawella.
Isolation Ward, Avissawella Hospital.

Bridges.

Wellawatta bridge, Colombo-Galle road.
Approaches to Bolgoda bridge, 5th mile, Panadure-Nambapana road.
Pamunugama bridge, 9th mile, Hamilton canal.
Bridge No. 17/3, Colombo-Kandy road.
Bridge on 7th mile, Hamilton canal.
Bridge over Pelawatta-ganga at the end of Horawela-Pelawatta road.
Reconstructing bridge No. 9/1, Panadure-Nambapana road.
Bridge over Dandugama-oya at Seeduwa.
Improvements to platform of Giriulla bridge, Negombo-Giriulla road.
Angulana bridge on approach road to Angulana Railway Station.
Bridge on 17th mile, Nugegoda-Pokunuwita road.
Foot bridge over the Mahaweli-ganga at Haloluwa.
Causeway over the Amban-ganga at Elahera.
Reconstruction of Castlereagh bridge, 3rd mile, Wanarajah road.
Strengthening Kahawaturai bridge No. 6/7, Nawalapitiya-Hatton road.
Extension of bridge No. 11/14, Peradeniya-Ramboda road.
Hikkaduwa bridge on 61st mile, Colombo-Galle road.
Repairing Bentota Bridge, 39th mile, Colombo-Galle road.
Denepitiya bridge No. 3/1, Weligama-Telijjawela road.
Kahawatta bridge No. 2/3, Beliatta-Walasmulla road.
Reconstructing Seenimodera bridge No. 119/1, Colombo-Galle-Hambantota road.
Reconstructing bridge No. 121/3, Colombo-Galle-Hambantota road.
Reconstructing bridge No. 117/5, Colombo-Galle-Hambantota road.
Rebuilding bridges Nos. 2/4, and 41/10, Matara-Akuressa-Viharahena road.
Reconstruction of bridge No. 92/2, Goyapana-Tangalla road.
Reconstruction of Valukkai Aru bridge, 5th mile, Jaffna-Karativu road.
Dodanduwa bridge, No. 65/1, Colombo-Galle road.
Katugastota bridge, 2½ mile, Kandy-Katugastota road.
Extension to bridge No. 1/1, Paranthan-Karachchi road.
Bridge No. 28/2, Karativu-Sammanturai road.
Salt Lake bridge No. 5/1, North Coast road.
Reconstructing bridge No. 27/3, South Coast road.
Toppu bridge over the Maha-oya near 27th mile, Colombo-Puttalam road.
Reconstruction of bridge No. 17/1, Kurunegala-Puttalam road.
Renewing bridges Nos. 6/1 and 6/3, Kuliyapitiya-Hettipola road.
Reconstructing bridge No. 5/5, Bibile-Medagama road.
Widening bridge No. 6/1, Badulla-Bandarawela road.
Widening bridge No. 31/5, Colombo-Avissawella-Haputale road.
Reconstructing bridge No. 39/4, Colombo-Avissawella-Haputale road.
Improving bridge No. 2/6, Ambepussa-Alawwa road.
Reconstructing bridge No. 96/3, Madampe towards Hambantota road.
Strengthening bridge No. 3/7, Pasyala-Giriulla road.

New Roads.

Approach road to Pallewela Railway Station.
Cart road from Hendala to Uswetakeiyawa.
Extension of Kukul Korale road from Badureliya towards Kalawana.

Approach road to Kirillapone Railway Station.
Road from Tissamaharama to Kataragama.
Toppur-Seruwila road.
Welimada-Kirklees road, Welimada to Haloya.

Additions and Improvements to Roads.

Improvements to Colombo-Negombo road.
Raising culvert No. 6/1, Colombo-Negombo road.
Widening junction at Bandaragama.
Improvements to miles 18–22 and 32–37, Colombo-Galle road.
Construction of culverts, 20th mile, Colombo-Kandy road.
Improvements to Katugastota-Madulkele and Kabaragala road.
Improvements to miles 6, 7, and 13, Kurunegala- Dambulla road.
Improvements to miles 32, 35, 40, 45, and 54, Kandy-Badulla road.
Improvements to roads, Talawakele town.
Widening main road, Gampola town.
Ambalangoda road deviation.
Improving Beliatta-Tangalla road.
Widening approach road to Railway Station, Ambalangoda.
Improving 1st and 2nd miles, Dickwella-Beliatta road.
Improvements to miles, 39, 54 to 72, Colombo-Galle-Hambantota road.
Widening road embankments on 24th and 25th miles, Matara-Akuressa-Viharahena road.
Improvements to culverts, Hambantota-Tanamalwila-Wellawaya road.
Construction and extension of culverts Nos. 13/1, 34/5, 34/6, and 34/7, Matara-Akuressa-Viharahena road.
Jaffna-Pooneryn causeway.
Velani-Pungudutivu causeway.
Paranthan-Karachchi-Mullaittivu road extension.
Improvements to Jaffna-Kankesanturai road.
Improving the Coast road to Colombo (Pooneryn to Mannar).
Improving Point Pedro-Kudathanai-Maruthankerni road.
Widening and improving and extending culverts on sections of Kandy-Jaffna road.
Metalling 2nd and 3rd miles, Mullaittivu-Kokkilai road.
Improvements to Valaichchenai-Mahaweli-ganga road.
Widening and improving Kandy-Trincomalee road.
Widening and improving South Coast road.
Tarring miles 13–19, 22 and 23, Trincomalee-Yan-oya road.
Tarring miles 9–16, Pottuvil-Moneragala road.
Tarring miles 27–34, Valaichchenai-Mahaweli-ganga road.
Raising 1st mile, Palavi Service road.
Improving 9th and 10th miles, Kurunegala-Narammala road.
Widening and improving 1–5 miles, Pannala-Kuliyapitiya road.
Widening miles 10, 12–15, Alawwa-Polgahawela road.
Approach road to Chilaw Railway Station.
Widening and improving Alawwa-Polgahawela road.
Metalling and tarring sections of Galkulam-Madawachchiya road.
Widening miles 77 to 83, Galkulam-Anuradhapura road.
Improving Mannar-Pesalai-Talaimannar road.
Improving and tarring Puliyadi-Irakkam to Madhu road.
Metalling and tarring Kekirawa-Talawa road.

Copyright Photograph. *Chitrafoto.*

LIGHTHOUSE AT DONDRA.

Extension of culverts, reconstructing temporary bridges and tarring, Habarana-Topawewa road to Mahaweli-ganga.
Protection of road at Hangili-ela, 69th mile, Kandy-Badulla road.
Widening and improving miles 64, 67, and 77, Kandy-Badulla road.
Widening between and extension of culverts, Badulla-Batticaloa road.
Widening 1st mile, Bandarawela-Welimada road.
Retaining walls, Colombo-Kandy road.
Improvements to Avissawella-Ginigathena road.
Renewing and extending bridges Nos. 3/5, 3/8, and 3/9 and tarring 6th mile, Pasyala-Giriulla road.
Improvements to culverts, Colombo-Avissawella-Haputale road.
Improvements to small span bridges on miles 9, 10, 12, and 13, Warakapola-Ruanwella road.
Tarring sections of Colombo-Avissawella-Haputale road.

Improvements to Minor Roads.

Extending bridge No. 2/4, and relaying platform and improvements on steep gradients, Kirindiwatta-Ganemulla road.
Reconstruction of bridge No. 8/1, Agalawatta-Badureliya road.
Reconstruction of bridge No. 8/1, Raigama-Anguruwatota road.
Rebuilding culverts 4/1, 6/1, and 8/4 and retaining wall on 3rd mile, Negombo-Alutapola road.
Rebuilding bridge No. 5/12, Galaha-Pupuressa road.
Improvements to Radella Short Cut road.
Improvements to Ragalla Kurunduoya road.
Renewing bridge No. 13/1, Labuduwa-Wanduramba road.
Reconstruction of bridges Nos. 20/7 and 20/8, Kamburupitiya-Mawarella road.
Renewing bridge No. 2/2, Tangalla-Wiraketiya road.
Reconstruction of bridge No. 7/3, Beliatta-Walasmulla road.
Rebuilding culverts Nos. 37/2, 37/6, and 37/7 and bridge No. 48/9, Kotapola-Urubokka-Mawarella, road.
Improvements to bridges and culvert No. 2/1, Yattalamatta-Atumale road.
Improvements to culvert No. 11/3 and bridges Nos. 12/11, 15/6, and 16/6, Elpitiya-Pitigala road.
Culverts on 1st and 3rd miles, Madukanda-Iratperiyakulam road.
Construction of two culverts on 7th mile, Oddusuddan-Puthukkudiyiruppu road.
Causeways on 7th mile, Nellukulam-Neriyakulam road.
Culverts on 2nd mile, Tanniyuthu-Kumulamunai road.
Muthur-Foul Point road.
Reconstruction of bridge No. 5/2, Kahawatta-Bemulugedera road.
Improvements to miles 2–5, Muttetugala-Hiripitiya road.
Improvements to miles 10 and 15–17, Kiriyankali-Andigama-Anamaduwa road.
Improving Kalugamuwa-Vilakatupota road.
Improvements to miles 21–25, Galanbindunuwewa-Kahatagasdigiliya (Eastern Minor road).
Bridges on 5th mile, Halmillewe-Negama-Madawachchiya road.
Improvements to miles 3–7, Palugama-Boralanda-Welimada road.
Improvements to Talawitiya-Kurugamodera road.

Raising Roads above Flood Level.

Raising 21st and 22nd mile, Colombo-Avissawella road.
Raising Hendala-Hunupitiya road.
Raising section of 25th mile, Horana-Anguruwatota ferry-Alutgama road.
Raising section of road, 11½ mile, Peradeniya-Gampola road.
Raising 6th and 7th miles, Puttalam-Trincomalee road.
Raising 59th mile, Colombo-Avissawella-Haputale road.

Loan Works.

Extension of existing Central Telegraph building to house the new Automatic Telephone Exchange.
New Hangar, Colombo Airport.
New Post Office and Automatic Exchange at Maradana.
New Post Office and Automatic Exchange at Havelock Town.
Training School for Youthful Offenders at Watupitiwela.
New Lighthouse at Galle.
Emergency landing ground, Puttalam.
Passara-Nakkala road.
Hayes-Lauderdale road (Southern Division).
Hayes-Lauderdale road (Sabaragamuwa Division).

WORKS CARRIED OUT FROM VOTES OF OTHER DEPARTMENTS.

Improvements to Zoological gardens, Dehiwala.
Establishment of a Fisheries Research Station, Colombo (Scheme assisted by the Colonial Development Fund).
Repairs to Totagamu Rajamaha Vihare, Telwatta, Hikkaduwa.
Erection of an enclosure for rearing crocodiles at Hikkaduwa.
Replacing brick pillars in stores and construction of a sump at wave trap at Pittawattemodera, Hambantota, for the Salt Department.
Metalling road at Karadiyanaru Farm School, E. P.
Improvements to Kandy-Jaffna road at 74th mile to prevent submergence of the road contingent to the raising of the Nachchaduwa Tank spill.
Unemployment relief works at Buller's road swamp, Watupitiwela and Ratmalana.

Public Works Department Private Account.

Augmentation of Wattegama Water Supply.
Ragalla Water Supply Scheme.
Improvements to Nuwara Eliya Water Supply (Stage I).
Gampola Water Supply Augmentation Scheme.
Kurunegala Water Supply Augmentation (Stage I).
Kurunegala Water Supply Augmentation (Stage II).
Badulla Water Supply.

Miscellaneous.

Colombo Airport.
Improvements to Mannar Water Supply.

Augmentation, Mannar Water Supply.
Water Supply to Government Quarters, Vavuniya.
Karaiyur Reclamation Scheme.
Motor Boat Service between Jaffna Peninsula and Delft.
Ferry boat for Jaffna District.
Improvements to Boat Channel, Jaffna lake.
Improvements to Chilaw Water Supply.
Improvements to Batticaloa Water Supply.
Improvements to Diyatalawa Water Supply.

IRRIGATION.

Early History.—From the earliest period in the history of the Island, the importance of conserving water for irrigation has been recognized. Historical records indicate that the construction of the necessary tanks and channels came to be regarded as a special and solemn duty assigned to the King for promoting the wealth and welfare of his subjects, and that in proportion to the zeal with which different monarchs had exercised this prerogative their names were venerated. The remains of extensive and intricate networks of tanks and canals can be found to-day in every part of the Island. Though it is unlikely that all these various irrigation systems ever existed simultaneously in full working order, it is clear that the ancient engineers realized the principles of conserving on a very large scale the intermittent supplies carried by the main rivers, and with the advantage of an unlimited command of labour and an intimate knowledge of their terrain, though handicapped by the primitive nature of their technique and appliances, they made valiant and often successful efforts to apply them.

Decay and Subsequent Growth.—Indigenous irrigation activity and agricultural prosperity seem to have reached their zenith about the twelfth century A.D. From then onwards to the modern era Ceylon was not infrequently ravaged by internal warfare and pestilence. No large irrigation work was constructed in this period, and, until the advent of the Dutch and subsequently of the British, the works already built were allowed to fall into disuse and disrepair. There is probably no form of civil engineering work that demands more constant and unremitting attention to its maintenance than that connected with the control of water, and it is not difficult to appreciate that without such attention the once great irrigation works very rapidly succumbed to the onset of floods and the ceaseless inroads of the jungle. In modern times many of the old irrigation works have been restored to active usefulness. There are yet others embedded in the jungle which await restoration as and when occasion arises.

Importance of Irrigation.—The importance of irrigation in Ceylon is due to two causes, one dietetic and the other climatic. Rice is the staple food of the people and its cultivation, though not always remunerative, has, through secular and religious encouragement, acquired a definite social status as the national agricultural industry. Rice practically grows in water, and although the rainfall in the Island is generally adequate in total amount, its seasonal incidence is uncertain. Rice cultivation cannot succeed if it depends solely on the vagaries of such rainfall, and the construction and maintenance of artificial means of diverting and conserving water are manifestly essential.

Classification of Irrigation Works.—The total area under paddy in Ceylon to-day is approximately 810,426 acres, which may be divided into four main categories according to the system or irrigation practised in each :—

		Approximate Area. Acres.
I.	Major works	170,426
II.	Minor works : Village tanks	200,000
III.	Do. Village channels	170,000
	Total under artificial irrigation ..	540,426
IV.	Direct rainfall	270,000
		810,426

The owners of land under major works are required to contribute, by an assessed annual rate, towards the cost of construction and maintenance of the works. The " construction rate " is generally a very small percentage of the capital cost of the work and the " maintenance rate " not infrequently produces considerably less revenue than the actual expenditure incurred by Government on the maintenance of the work.

Minor works, both tanks and channels, are maintained by the villagers themselves under the general supervision of Government officials and with the tangible and often considerable assistance of Government. The fourth category covers lands that, being situated in localities of evenly distributed rainfall, are able with reasonable chances of success to dispense with artificial irrigation. The trouble on these lands is often the super-abundance of water rather than its deficiency, and drainage rather than irrigation their particular need.

Progressive Development of Activities.—When the Irrigation Department was created in 1900 it was assigned the engineering duties of operating and maintaining those major works which had already been restored in whole or part, and of restoring a selection of old abandoned works under which the prospects of development appeared to be favourable. The administrative side of these works and the general responsibility for all minor irrigation works remained the function of the revenue officers, with such advice and assistance as they required from the Irrigation Department. Under this regime steady progress was made with the extension and improvement of irrigation service under major works, and latterly the engineering resources of the department have been applied in a rapidly increasing degree to the improvement of minor irrigation tanks and channels on modern scientific lines. Another development of the department's functions, which is rapidly acquiring considerable importance, is the construction of schemes for preventing or abating floods, for improvement of drainage conditions on irrigable lands, and for exclusion of sea-water therefrom. With this development the department has become directly interested in all the four categories of irrigation in Ceylon and the scope of its service has correspondingly widened.

Irrigation Works.—Under the present Constitution the department is under the general control of the Executive Committee of Agriculture and Lands, and a progressive policy of active development is being pursued.

Copyright Photograph. *Chitrafotos.*

WARRIOR.

The summarized expenditure under the different services during 1937–38 is as follows :—

	Rs.	c.
Personal Emoluments	754,105	31
Other Charges (surveys, tools, transport, &c.) . ..	388,322	66
Maintenance—		
Major works	289,756	6
Village works	24,628	7
Roads	56,784	95
Construction—		
Major works	871,598	18
Village works	264,412	24
Department of Fisheries : Fresh water fish culture	1,533	14
Department of Agriculture : Acquisition and drainage of Beminiyanwila	868	20
Surveys done by the Survey Department for the Irrigation Department	125,367	4
	2,777,375	85

New Development Schemes.—As the last item in the foregoing summary suggests, the foundations are being laid for a much more extensive expansion of future irrigation policy. The engineering surveys of all large irrigation projects are now carried out by the Survey Department on lines specified by the Irrigation Department. The latter is thus provided with excellent plans, topographical, contour and detailed, on which the whole of the scheme in all its detail can be laid down in advance, and the costly errors that have sometimes been made with other large projects, started without adequate data, are effectively prevented. In addition to the engineering surveys, a survey is also carried out by the Agricultural Department to investigate the nature of the soils covered by the scheme, and to make a preliminary classification of the constituent areas according to their suitablilty for paddy or other crops.

In the loan recently floated the sum of Rs. 15 million is included for irrigation works, and already schemes of an aggregate estimated cost of about half this sum are approaching the construction stage.

Modernization of Construction.—In order to expedite the completion of these new schemes to a stage at which their benefits to agricultural development can be utilized serious consideration is being given to the questior of using modern power-driven plant on a large scale. The department has recently purchased three Diesel-driven Excavators and a Diesel Tractor (Caterpillar) and Grader and these machines are being tried out on various works. The results to date are sufficiently satisfactory to justify further and more extensive trial, and in addition to the use of these machines on purely engineering construction it is probable that their economic suitability for the operations of clearing and asweddumizing jungle land will be tried out under actual working conditions.

Research and Training.—The Research Laboratory has been built and its practical value has been put to very satisfactory tests.

Scope of Future Developments.—Ceylon is essentially an agricultural country, and as such has been well endowed by nature with all material factors for the creation of a prosperous industry. These factors need proper development, however, and none of them more so than those connected with the control and conservation of the Island's lavish resources in water. Apart from the ultimate object of producing the staple food of the country in sufficient quantity to meet her own consumption, a forward policy in irrigation development will restore the paddy industry to its traditional prestige and natural importance, and enable the resettlement of a happy and contented peasantry on the land.

5——J. N. 83918 (5/39)

CHAPTER XIII.

Justice and Police.

The Judicial System of Ceylon.

Supreme Court.—The Supreme Court consists of a Chief Justice and eight Puisne Judges. It has appellate and revisional jurisdiction in civil cases from all courts except Village Tribunals. It exercises no original jurisdiction in civil cases. Under Ordinance No. 2 of 1891 it is a Colonial Court of Admiralty.

The Supreme Court has original jurisdiction in all criminal cases and exclusive jurisdiction in respect of the more serious offences, such as homicide, rape, and the graver types of housebreaking and robbery. In practice it seldom tries cases which do not fall within its exclusive jurisdiction. It usually sits with a jury and tries cases committed for trial by a Police Court. It exercises appellate and revisional jurisdiction over all criminal courts except Village Tribunals. The Supreme Court may pass any sentence authorized by law. It has also the power to issue writs of *habeas corpus, mandamus, quo warranto, &c.*, and also to disenrol Advocates and Proctors who are found guilty of deceits, crimes or malpractices. Special jurisdiction is conferred on the Supreme Court to hear election petitions.

District Courts.—The District Courts, of which there are at present 21 in the Island, have unlimited original civil (including testamentary and matrimonial) jurisdiction and criminal jurisdiction in respect of all offences which are not within the exclusive jurisdiction of the Supreme Court. District Courts try only cases committed to them for trial by Police Courts*. District Courts may pass any of the following sentences :—

(*a*) Imprisonment of either description for a term not exceeding two years ;
(*b*) Fine not exceeding one thousand rupees ;
(*c*) Whipping ;
(*d*) Any lawful sentence combining any two of the sentences aforesaid.

When a person is convicted at one trial of any two or more distinct offences the aggregate punishment it can award is twice the punishment mentioned above.

Under sections 3 and 4 of Ordinance No. 2 of 1891 the Governor has power to appoint a District Court to have a limited Admiralty jurisdiction. The District Court of Colombo alone has been appointed to exercise such jurisdiction.

Police Courts.—There are 30 Police Courts and 3 Municipal Courts in the Island. The offences which a Police Court may try are specified in the schedule to the Crininal Procedure Code, 1898. Various Ordinances have also made other offences triable by a Police Court. A Police Court may not pass a sentence heavier than the following, except where an Ordinance has specially empowered it so to do :—

(*a*) Imprisonment of either description for a term not exceeding six months ;

* Under section 152 of the Criminal Procedure Code, a Police Magistrate who is also a District Judge may, in the course of an inquiry into an offence which is triable by a District Court, proceed to try such offence summarily when he is of opinion that it can properly be so tried. In such a case there is no previous committal.

(*b*) Fine not exceeding one hundred rupees ;
(*c*) Whipping, if the offender is under 16 years of age ;
(*d*) Any lawful sentence combining any two of the sentences aforesaid.

When a person is convicted at one trial of any two or more distinct offences the aggregate punishment it can award is twice the punishment mentioned above.

Police Courts also hold preliminary inquiries into crimes with a view to committal for trial by a District Court or the Supreme Court. If after inquiry a Police Magistrate is of opinion that an accused should be discharged he makes order to this effect. Where a Magistrate is of opinion that an accused should be committed for trial to a court of competent jurisdiction, the record of the proceedings at the inquiry is forwarded to the Attorney-General, who directs the Police Magistrate to commit the accused or to discharge him.

A special jurisdiction is conferred on Police Courts to make orders for the maintenance of wives and children.

Courts of Requests.—Courts of Requests have original civil jurisdiction (subject to certain exceptions) in all actions in which the debt, damage, or demand or value of the land in dispute does not exceed Rs. 300.

There are 30 Courts of Requests in the Island, of which one (the Colombo Court) is presided over by a separate Commissioner. All the others are presided over by a District Judge or a Police Magistrate who acts as Commissioner of Requests in addition to his duties as District Judge or Police Magistrate.

Village Tribunals.—Village Tribunals have civil jurisdiction in actions in which the debt, damage, or demand or the value of the land in dispute does not exceed Rs. 20, or, where both parties consent, Rs. 100, and in cases between a Co-operative Society and its members. Village Tribunals have criminal jurisdiction to try breaches of rules made by the inhabitants of the subdivision or the Village Committee under section 29 of Ordinance No. 9 of 1924, and various minor offences enumerated in the schedule to Ordinance No. 9 of 1924. A Village Tribunal may impose a fine not exceeding Rs. 20 or 14 days' imprisonment in default of payment.

A Village Tribunal is presided over by a paid President appointed by the Governor. He sits with three councillors chosen by lot. In the case of a difference of opinion between the President and the councillors, the opinion of the President prevails (section 50 of Ordinance No. 9 of 1924).

There are 220 Village Tribunals in the Island, namely, 24 in the Western Province, 36 in the Central, 50 in the Southern, 6 in the Northern, 22 in the Eastern, 21 in the North-Western, 15 in the North-Central, 17 in the Uva, and 29 in the Province of Sabaragamuwa.

Village Committees.—Village Committees in subdivisions, where no Village Tribunal has been established, have power to try breaches of rules made by the inhabitants of the subdivision or the Village Committee under section 29 of Ordinance No. 9 of 1924, and have the same power of punishment as Village Tribunals.

There are 49 Village Committees exercising this jurisdiction in the Island, namely, 48 in the Northern Province and 1 in the North-Western Province.

6——J. N. 83918 (5/39)

The following schedule gives detailed information as regards the number of Courts, the number of Judges, Magistrates, &c. :—

Number of Courts, Judges, &c.

Court.	Number of Courts.	Number of Judges.	Remarks.
Supreme Court	1	9	One Chief Justice and eight Puisne Judges
District Court	21	28	There are four judges for the District Court of Colombo and two each for those of Kandy, Galle, and Jaffna. There is one judge for the District Courts of Chilaw and Puttalam, one for those of Nuwara Eliya and Hatton, and one for those of Mullaittivu and Vavuniya. Eleven of these officers are Police Magistrates and Commissioners of Requests in addition to their duties as District Judges. Two are supernumerary judges
Police Court	30	20	There are three Magistrates sitting at Colombo. The following groups of Courts have one Magistrate each :— Badulla, Bandarawela ; Matale, Panwila, Teldeniya ; Nuwara Eliya, Hatton ; Jaffna, Kayts, Mallakam : Point Pedro, Chavakachcheri ; Batticaloa, Kalmunai ; Mullaittivu, Vavuniya
Village Tribunal	220	59	—
Village Committee	63	—	—

POLICE.

The Police Force of Ceylon was established and is regulated under Ordinance No. 16 of 1865, as amended by the subsequent Ordinances.

Before the Police Force was constituted the duties of the Police were attended to by the Headmen. Regular Police have been gradually introduced into most parts of Ceylon since 1865. In the rural areas of the Provinces the Headmen play an important part in the detection and investigation of grave crime and it is essential that they should receive elementary instruction in detective methods. Classes of instruction were arranged in all parts of the Provinces during 1938, and the knowledge thus gained should be of the greatest value in meeting the increase in crime with which the Police have to deal.

The sanctioned strength of the Force is 1 Inspector-General, 2 Deputy Inspectors-General, 41 Superintendents, Assistant Superintendents, and Probationers, 239 Chief Inspectors, Inspectors and Sub-Inspectors (including the Port Police), 2 Sergeant Majors, 381 Sergeants, and 2,620 Constables.

General.—The following is a statement of crime for the last 5 years :—

	1938.	1937.	1936.	1935.	1934.
Total	16,854	14,673	14,287	12,957	12,730
True	10,858	9,639	9,400	8,505	8,405
Convictions	3,665	3,169	3,381	3,028	3,163
	34%	33%	36%	36%	38%
Pending	2,499	1,751	1,896	1,701	1,397

The following is an analysis of the main heads of crime for the last 5 years :—

	1938.	1937.	1936.	1935.	1934.
Homicide	390	326	379	330	352
Attempted homicide	218	200	228	175	141
Grievous hurt	1,933	1,618	1,869	1,486	1,612
Hurt with dangerous weapons	2,807	2,480	2,575	2,167	2,233
Burglary	3,376	3,136	3,137	2,910	2,777
Cattle theft	2,136	1,537	1,173	1,328	968
Robbery	1,418	1,219	1,239	1,092	1,134
Theft over Rs. 20	2,694	2,525	2,305	2,304	2,246
Bicycle theft	769	611	470	354	311
Other offences	1,113	1,021	912	811	856

Note.—The item " Theft of Cattle and Praedial Produce " in Diagram No. 10 represents " Cattle Theft " only from 1933 to 1938.

DIAGRAM No. 10

CRIME IN CEYLON 1915-1938

Reproduced and Printed by Survey Dept. Ceylon. 15. 5. 39.

Since 1937 thefts of cycles under Rs. 20 in value and unnatural offences were classified by the Police as crime.

The figures for 1937 and 1938 have been taken from the Police Grave Crime Abstracts which show the actual number of offences committed during the year. In previous years the figures quoted were taken from A. B. C. Returns furnished by the Magistrates and represented the *disposal* of true cases only.

There was an increase in crime, principally in the Eastern, North-Central, Sabaragamuwa, and the Southern Provinces. A considerable rise in cattle theft was caused by the repeal of the Cattle Branding and Voucher Ordinance in 1936.

Control of Motor Traffic.—There were 32,432 prosecutions under the Motor Ordinance. 778 were for reckless or negligent driving, 22 for driving a car when intoxicated, and 82 for failing to report an accident in which injury to a person was caused. In addition 60 cases for causing death, and 87 for causing injury by a rash and negligent act were instituted under the Penal Code.

One hundred and thirteen licences were cancelled or suspended.

3,558 accidents caused by motor vehicles were reported to the Police and 142 persons (of whom 91 were pedestrians) were killed as a result of injuries received in motor accidents.

In the majority of accident cases there is no compensation for the injured party where no offence can be proved or where the offender is acquitted in court. Compulsory third party insurance is essential and this is being provided for in the new Motor Ordinance that comes into effect in 1939.

24,138 prosecutions were entered against omnibuses, a type of vehicle which was responsible for 690 of the accidents reported.

The following are some relevant figures :—

Year.	Motor Vehicles on the Road.	Number of Prosecutions for exceeding Speed Limit.	Number of Prosecutions for Reckless or Careless Driving.	Fatal Accidents.
1933	23,359	394	343	92
1934	25,010	402	449	122
1935	27,052	597	619	129
1936	26,571	619	671	147
1937	30,223	649	739	154
1938	31,231	1,197	778	142

The control of motor omnibus traffic still necessitates the closest attention of the Police in order to check lawlessness on the high roads occasioned by omnibus company rivalry. But with the introduction of the new Motor Ordinance in 1939, the chances of this rivalry will be lessened by the existence of a central licensing authority that will have the power to assign routes and restrict licensing of vehicles according to the needs of the public.

Control of Bullock Cart and other Traffic.—Thirty-five persons were killed in street accidents in which vehicles other than motor vehicles were involved and 10,826 prosecutions were entered against drivers and owners of such vehicles. Action has been taken in Colombo to compel cyclists to keep to the side of the road, while in most towns pedestrians are from time to time reminded to use the pavements and where there are no pavements to keep to the right.

Cinematograph Films.—Films imported into Ceylon have previously been examined by the British Board of Film Censors in London and by the Censors in India. Lists of films passed, excised, or prohibited in England or in India are received monthly and private views, prior to public examination, are held where necessary by the Mayor of Colombo, who is the Censor for Colombo City, assisted by representative bodies.

The same system applies to outstations, copies of the lists being forwarded to local Censors. The system works well, and the managers of the various theatres readily co-operate with the authorities.

Maintenance of Order in the Streets.—In Colombo there were 13,201 prosecutions for offences against the Municipal and Statutory Laws. This figure includes 8,454 prosecutions against motorists. Later in the year a courtesy campaign was adopted and 400 motorists were warned for minor technical offences.

Gangs of traffickers in opium and ganja still give trouble, and boys are employed in large numbers for the sale and distribution of these prohibited drugs.

The molesting of passengers in the Fort and Pettah areas by shop touts and hawkers continues to bring undesirable notoriety to Colombo. The only remedy lies in the strengthening of the law, and it is hoped that this will be accomplished in 1939.

Criminal Investigation Department.

The Central Bureau established in 1930 to deal with forged notes and counterfeit coins dealt with 77 cases of forging, uttering, or possessing forged currency notes, as compared with 87 cases in 1937, and 120 in 1936. There were 58 cases of counterfeiting, uttering, and possessing counterfeit coins.

Immigrants.—90,690 persons entered and 114,924 left Ceylon *via* Talaimannar, compared with 101,910 arrivals and 111,250 departures by this route in 1937. Four absconders attempting to leave Ceylon were intercepted and arrested.

58,216 persons arrived from Tuticorin and 45,668 left Ceylon by this route, compared with 60,016 arrivals and 43,625 departures in 1937.

Colombo Airport.—With the official opening of the Airport at Ratmalana in February the duties of the Police in examining passports and dealing with destitute immigrants were extended to cover the arrival and departure of all aeroplanes. Two hundred and twenty-eight planes arrived and two hundred and twenty-seven departed during the year.

Air Raid Precautions.—In the latter part of the year 16 lectures were given on air raid precaution services by Officers of the Royal Army Ordnance Corps. Twenty-one selected officers, Inspectors and Sub-Inspectors from Colombo and the Western Province attended. Of these, 18 passed an examination on the subject and are being utilized for the further instruction of Police.

PRISONS.

Number of Admissions.—The total number of admissions on conviction during 1938 was 16,996 (16,546 males and 450 females). Of this number, 1,043 were admitted on conviction from the Supreme and District Courts. 147 were convicted of murder and culpable homicide not amounting to murder.

Copyright Photograph. *Chitrafoto.*

SALTERNS AT HAMBANTOTA.

Number sentenced to death and executed.—The number of male persons sentenced to death during the year was 44, of whom 27 were executed and 1 was pardoned and released by order of the Governor. Of these 27, 2 were executed in January, 1939.

Daily average population.—The daily average population (both convicted and unconvicted prisoners) of the prisons was 4,057·17 (3,985·87 males and 71·30 females).

Reconvicted prisoners.—The number of reconvicted prisoners admitted was 6,389 (37·53 per cent. of the total admissions). Of this number 1,878 were reconvicted criminals within the meaning of Ordinance No. 2 of 1926 as amended by Ordinance No. 27 of 1928.

Preventive detention.—No prisoners were sentenced to preventive detention by courts during the year. The daily average of prisoners undergoing preventive detention was 24·49.

Number in default of payment of fines.—The number of admissions for non-payment of fines was 11,993. In 10,108 of these cases the offences were either statutory or made punishable by Village Tribunal rules.

No statistics are available as to the number of cases in which time was given for the payment of fines or for payment by instalments.

Young Offenders.

(*a*) *Young first offenders.*—The number of admissions of young first offenders of the age of 16–21 was 1,427, of which number 984 were for non-payment of fines and 698 for statutory or Village Tribunal offences.

(*b*) *Young reconvicted offenders.*—The number of admissions of young reconvicted offenders was 664, of which number 454 were for non-payment of fines and 392 for statutory or Village Tribunal offences.

Religion and race.—The following table gives the nationality and religion of all convicted persons received into the prisons during the year 1938 :—

Table showing Nationality and Religion of all Convicted Persons received into Prisons during the Year 1938.

Nationality.									Religion.						
Resident Europeans.	Non-Resident Europeans.	Burghers.	Sinhalese.	Tamils.	Moors.	Malays.	Others.	Total.	Protestants.	Roman Catholics.	Buddhists.	Hindus.	Muslims.	Others.	Total.
—	5	46	12,487	2,702	1,485	87	184	16,996	31	1,273	11,689	2,426	1,475	102	16,996

Prison punishments.—The number of punishments imposed during the year on prisoners for offences against prison discipline was 3,601 as against 2,484 in 1937, the number of individuals punished being 2,336. In most cases the offences were of a trivial nature. Three prisoners were sentenced to undergo corporal punishment during the year 1938, as against 9 in the previous year. There were three escapes during the year, but all of them were recaptured.

7——J. N. 83918 (5/39)

The Prisons Ordinance, No. 16 of 1877, placed all the prisons in Ceylon under the control of the Inspector-General of Prisons. Ceylon therefore enjoys the advantages of a unified prison system which renders possible classification by institutions in addition to subclassification in institutions.

The principle upon which this classification proceeds is the separation of the different types of offenders—especially the separation of the young offender from the adult, the first offender from the "habitual", the convicted from the unconvicted, males from females, &c. To each type of offender appropriate methods of treatment and training are applied.

The different prisons are utilized as follows :—

Welikada (*Colombo*), for the detention and training of the following classes :—

(i.) Adult first offenders with sentences of two years and over ;
(ii.) All "Star" class, *i.e.*, European or educated Ceylonese first offenders ;
(iii.) Young prisoners of the age of 16–21 (both inclusive) irrespective of length of sentence ;
(iv.) Female prisoners other than those sentenced to short terms in outstations who are detained in the local prisons.

Hulftsdorp (*Colombo*), for all local convictions from the courts of the Colombo District who are sentenced to short terms of one month and under.

Mahara is set apart for adult reconvicted prisoners with sentences of over two years in one section, and for all adult first offenders with short sentences ranging from over one month up to and including six months in a separate section. Selected prisoners from among the reconvicted prisoners are especially classified in the Special Class B in which they serve a probationary period of six months prior to transfer to Kandy prison for industrial and other forms of special training in the Special Class A. Prisoners are also transferred to Mahara prison occasionally from other prisons for misconduct.

Bogambara (Kandy) is set apart for the following :—

(i.) First offenders convicted by local courts and sentenced to one month's imprisonment or less ;
(ii.) All first offenders with sentences of over one year and up to but not including two years ;
(iii.) Special Class "A", *i.e.*, selected reconvicted prisoners from Mahara with sentences of over two years ;
(iv.) Prisoners undergoing sentences of preventive detention.

Jaffna is set apart for the following :—

(i.) Persons sentenced by the local courts to imprisonment for one month or under ;
(ii.) Short term reconvicted offenders with sentences of over one month and up to and including two years ;
(iii.) Prisoners transferred from other prisons for misconduct under monthly report.

The special gang is also located at Jaffna. The special gang is intended for prisoners guilty of continued bad or violent conduct. These prisoners are kept strictly apart from the other inmates.

Anuradhapura is set apart for the following :—

(i.) Locally convicted short term prisoners who are sentenced to one month and under.

(ii.) First offenders with sentences of over six months and up to one year.

Negombo, Galle, Badulla, and Batticaloa.—The prisons at Negombo, Galle, Badulla, and Batticaloa are used for the detention of short term locally convicted prisoners, and prisoners on remand. A few long term prisoners are also located in these prisons for employment on domestic services or for special reasons.

Remand prisons.—There are separate prisons for remand prisoners and persons awaiting trial, civil debtors, &c., only in Colombo (adjoining Welikada Prison) and in Kandy. At other Stations the ordinary prisons for convicted prisoners are also used for the location of these types in separate blocks or wards.

Methods of Treatment of Different Types of Offenders.

A. *Young first offenders.*—All young offenders of the age of 16-21 inclusive with sentences of over one month are detained at Welikada in separate wards. Rover Scout principles are utilized for their training and regular camps are held. The Welikada Prison Rover Troop is the first officially recognized prison troop in the world. Educational classes, industrial and vocational training, First Aid instruction, Boxing, Gymnastics, Drill, and games form a part of the regular curriculum, in addition to the various Scout activities.

B. *Long term first offenders.*—The progressive stage system—a feature of the English prison system—has been adapted to suit local conditions and is largely used in connection with the training of these offenders. According to this system prisoners fall into different classes. Every prisoner sentenced to imprisonment immediately enters and remains in what is called the penal stage for one month. He then enters and remains in Class IV., when he becomes eligible to earn remission, for eleven months. Conditional upon good conduct and industry he is promoted to Class III. where he remains for one year and then on the same conditions to Class II. At the end of one year if his conduct is satisfactory he is promoted to Class I. Promotion from class to class carries with it a graduated scale of privileges and on entry into Class II., gratuity and good conduct badges can be earned. Prisoners who show special skill and aptitude in the various trades are appointed Instructors (Grades I. and II.) who are accorded enhanced rates of pay and privileges.

Another feature in the training of these long term first offenders is the placing of responsibility on individual prisoners. Long term first offenders in Class I. of exemplary conduct are selected for appointment as Disciplinary Prison Orderlies. Their duties consist in assisting the regular prison officers ; they are left in charge of small parties inside the prison and act as escorts within prison walls, &c.

A further experiment is the formation of Leagues on the lines of the Mutual Welfare Leagues in the New York Prisons. There are two such Leagues—one for the Disciplinary Prison Orderlies and the other for prisoners who have earned good conduct badges. Inmate responsibility, managing their own affairs within limits and training in the ideals of good citizenship are the salient features of these Leagues.

All long term first offenders are employed and trained in one or more of the many trades and handicrafts taught in Welikada Prison. On reaching certain grades of the stage classification they earn money part of which may be spent in the purchase of books and extras to the diets or sent to their families and part of which is accumulated and paid on discharge.

C. *Reconvicted prisoners.*—For the training of selected types of reconvicted prisoners there are two classes in Mahara and Bogambara Prisons. Specially selected reconvicted prisoners with sentences of two years and over constitute Class B. These prisoners while at work are kept separate from the others. Evening classes are held for them and they are supplied with books from the prison library. They are also given the privilege of playing games, &c. After a probationary training for six months in this class all who prove satisfactory are transferred to Kandy where they form Special Class " A ". Prisoners in Special Class " A " are treated like first offenders in all matters relating to pay, industrial training, privileges, &c.

Labour.—All labour of a purely mechanical and unprofitable nature has been abolished. Prisoners are mostly employed on public works, the domestic services of the prisons, and on industrial undertakings. At Mahara the principal work is the quarrying of stone and stone breaking. In Jaffna the work consists of the reclamation of the lagoon. Welikada and Bogambara Prisons are highly industrialized. The following industries are carried on :—carpentry, tailoring, brush-making, rattan, fibre, shoemaking, blacksmiths' work, tin smiths' work, spinning and weaving, soap making, and printing. At Welikada there is in addition an up to date steam laundry which washes the linen of all the hospitals, railway, asylum, &c. The output value of prison industrial undertakings for the year 1937–38 was Rs. 270,352·75 as against Rs. 248,785·44 during the previous year.

Education.—For young offenders, that is, those of 22 and under, vernacular education is compulsory. At Welikada, Bogambara, and Mahara prisons evening classes, conducted by volunteer social workers, have been organized for the benefit of both young offenders and adult offenders. These classes are held in English and in the vernacular. Commercial classes in typewriting, shorthand, &c., are also held in Welikada prison for the benefit of Star Class prisoners.

Recreation.—Well conducted prisoners, particularly young offenders, Star Class prisoners, first offenders, preventive detention prisoners and prisoners in the Special Classes A & B who have reached and advanced stage in their training are allowed to take part in games both indoor and outdoor. Boxing, gymnastics, and volley ball are popular games.

Religious instruction.—There are no prison Chaplains in Ceylon but representatives of all creeds and denominations are allowed to visit the prisons, hold services, and give religious instruction. Services are held every Sunday and all prisoners are encouraged to attend the services of their particular denomination.

Preventive detention.—There is no separate prison for prisoners undergoing preventive detention. These prisoners are located in a portion of Bogambara prison specially set apart for them. But the conditions of an ordinary rigorous imprisonment prison afford little scope for the special course of training contemplated by the system of preventive detention, and the reorganization of the system is under consideration.

After care.—An unofficial organization known as the Ceylon Discharged Prisoners' Aid Association, with sub-committees in Colombo and Kandy works in conjunction with the prison authorities and is the agency through which aid is given to discharged prisoners. Owing to lack of funds and public support the scope and activities of the Association are very restricted.

Remission and Review of Sentences.—All criminal prisoners sentenced to rigorous or simple imprisonment (except under Chapter 7 of the Criminal Procedure Code) become eligible to earn a remission of sentence, which is conditional on good conduct and industry and which is based on the mark system, on completion of the first month (30 days) of their sentences. The maximum remission of sentence that a prisoner can earn in the case of a male prisoner, one-fourth of the period of imprisonment during which he is allowed to earn marks and, in the case of a female prisoner, one-third of such period. Under rule 40 of the statutory rules also the case of every prisoner is reviewed by the Governor on completion of 4, 8, 12, 15, and 20 years respectively of the term of imprisonment and a number of premature releases are made every year.

Health of prisoners.—Whole-time resident Medical Officers are provided for the three Colombo prisons and for Mahara prison. The Medical Officers attached to all the other prisons are not whole-time officers but have other outside duties to perform as well.

At Welikada there is an up to date prison hospital intended to serve the three Colombo prisons, with accommodation for 120 beds for general cases and 60 beds for infectious diseases.

In the female section of the Welikada prison there is a ward with 7 beds for general cases.

At Bogambara there is a hospital consisting of 5 wards.

In all other prisons a separate ward is utilized as a hospital.

All cases which need operative treatment or special nursing are transferred to the ordinary civil hospitals for treatment.

The total number of deaths of prisoners (both convicted and unconvicted) admitted to prison was 81 in 1938, as against 59 in 1937. These deaths include prisoners who died in the prisons and prison hospitals as well as in civil hospitals and other medical institutions, but are exclusive of judicial executions. They also include two cases of suicide and two cases of homicide respectively.

CHAPTER XIV.

Legislation.

THE following are the important Ordinances passed in the year 1938:—

The Estate Duty Ordinance, No. 1 of 1938.—This Ordinance makes provision for the re-imposition and collection of estate duty in Ceylon and gives effect to the decision of the State Council that steps should be taken for the restoration of the levy of death duties which were discontinued as a result of the enactment of the Abolition of Estate Duty Ordinance, No. 51 of 1935.

It has been found necessary to retain those essential provisions of the old Estate Duty Ordinance, No. 8 of 1919, which were derived from the corresponding sections of the relevant Finance Acts of the Imperial

Parliament ; but the basis of the levy of duty has been entirely changed in the Ordinance and the opportunity has been taken to introduce new procedure for the assessment, payment and collection of estate duty.

Estate duty will be levied on the value of the "Ceylon estate" of a deceased person, but the graduated rate per cent. at which such duty is payable will be ascertained by reference to the value of the "total estate" of the deceased, wherever situate, whether outside or within Ceylon. No estate duty will be payable unless the value of the total estate exceeds Rs. 20,000.

The Manufacture of Matches (Regulation) Ordinance, No. 9 of 1938.—This Ordinance makes provision for the regulation and control of the manufacture and sale of matches in Ceylon. No person is to be allowed to manufacture matches, splints, veneers or boxes or to import splints, veneers or boxes except under a licence issued by the Director of Commerce and Industries. The Ordinance also provides for a system of quotas to control the manufacture of matches.

The Savings Certificates Ordinance, No. 11 of 1938.—This Ordinance repeals the Post Office Cash Certificates Ordinance, 1929, and the Post Office Cash Certificates (Amendment) Ordinance, 1932, and makes provision for the issue of Ceylon Savings Certificates similar to the National Savings Certificates issued in Great Britain under the powers conferred by section 59 of the Finance Act (10 and 11 Geo. V. c. 18).

The Tea Control Ordinance, No. 12 of 1938.—This Ordinance provides for the continuance of a system of Tea Control for a further period of five years from April 1, 1938, in accordance with the Agreement entered into between the International Tea Committee and the Associations representing the tea producers of India, the Netherlands East Indies and Ceylon. The Ordinance, which came into force on April 1, 1938, reproduces the main features of the Tea (Control of Export) Ordinance, No. 11 of 1933. An important addition is the provision whereby a system of control of production of tea may be introduced, if it appears at any time that the amount of made tea produced in Ceylon is greatly in excess of the amount which Ceylon is entitled to export together with its requirements for local consumption. Any system of control of production will be introduced by regulations which will have to be approved by the State Council and ratified by the Governor.

The Criminal Procedure Code (Amendment) Ordinance, No. 13 of 1938.—This Ordinance amends the Criminal Procedure Code, 1898, so as to vest in Magistrates a greater degree of responsibility than they had with regard to the committal to the higher courts of cases which they have not the power to dispose of summarily. The opportunity has also been taken to give effect to the suggestion made by the Secretary of State for the Colonies that the Ceylon law on the subject of sentences of death on expectant mothers should be brought into line with the English law. Numerous other amendments which experience has shown to be necessary or expedient are also made by this Ordinance.

The Foreign-going Aircraft (Exemption from Customs Duty) Ordinance, No. 18 of 1938.—This Ordinance exempts from customs duty certain articles required for the use of aircraft on voyages to or from Ceylon. The only articles at present exempted are fuel and lubricants but other articles may be exempted by a resolution of the State Council which will require ratification by the Governor.

Photo by Werner Conitz. *Courtesy Govt. Tourist Bureau.*

"BUFFALO EARNS HIS KEEP."

The Court of Criminal Appeal Ordinance, No. 23 of 1938.—This Ordinance makes provision for the establishment of a Court of Criminal Appeal in Ceylon.

The Venereal Disease Ordinance, No. 27 of 1938.—The object of this Ordinance, which is modelled on the provisions of the Venereal Disease Act, 1917 (7 and 8 Geo. V. c. 21), is to prevent the treatment of venereal disease by persons other than registered medical practitioners and specially authorized practitioners of indigenous medicine.

The Rubber (New-planting) Ordinance, No. 38 of 1938.—This Ordinance provides for the allocation and distribution of the rights to plant new areas in rubber under the new International Agreement relating to rubber control.

The Kandyan Law Declaration and Amendment Ordinance, No. 39 of 1938.—The object of this Ordinance is to declare and amend the Kandyan Law in order to give effect to the recommendations made in the Report of the Kandyan Law Commission which was published as Sessional Paper XXIV. of 1935.

The Ceylon Royal Naval Volunteer Reserve (General Service) Ordinance, No. 44 of 1938.—The Naval Volunteer Ordinance, No. 1 of 1937, established a naval volunteer force in Ceylon. By the Ceylon Naval Defence Order, 1937, promulgated by His Majesty in Council on July 29, 1937, approval was given for the establishment in Ceylon of a branch of the Royal Naval Volunteer Reserve. The same Order in Council authorized the Admiralty to accept any offer made by the Government of Ceylon to place at His Majesty's disposal for general service in the Royal Navy any vessel of war maintained out of funds provided by Ceylon or by Ceylon in conjunction with some other Colony. This Ordinance, which makes the necessary provision, is to be read and construed as one with the Naval Volunteer Ordinance, No. 1 of 1937.

The Motor Car Ordinance, No. 45 of 1938.—This Ordinance amends and consolidates the law relating to motor traffic in Ceylon. The Ordinance reproduces many of the provisions of the Motor Car Ordinance, 1927, which it replaces, but substantial changes have been made in order to give effect to those of the recommendations, made by the Transport Commission in Sessional Paper No. XII. of 1937, which have been accepted by the State Council. The opportunity has also been taken to remove various difficulties experienced in the administration of the repealed Ordinance, and to clarify certain provisions of that Ordinance which have from time to time been criticized by the Courts.

In Part VIII. provision is made for the first time for compulsory insurance against third-party risks. This part is based largely on the corresponding provisions of the Road Traffic Acts, 1930 and 1934, of the Imperial Parliament, but modifications to suit local conditions have been made on the lines of the Road Traffic (Third-party Insurance) Ordinance, 1938, of the Straits Settlements, and Chapter VIII. of the Motor Vehicles Bill recently introduced in the Indian Legislature.

The Criminal Procedure Code Amendment Ordinance, No. 47 of 1938.—This Ordinance amends the Criminal Procedure Code, 1898, so as to give effect to certain recommendations made in the Report of the Departmental Committee on the Administration of Prisons (Sessional Paper XXVI. of 1936) and to supplement the Payment of Fines (Courts of Summary Jurisdiction) Ordinance, No. 49 of 1938.

The Payment of Fines (Courts of Summary Jurisdiction) Ordinance, No. 49 of 1938.—This Ordinance amends the law with respect to the enforcement of fines imposed by Courts of summary jurisdiction with a view to reducing as far as possible the number of cases in which persons are committed to prison for default in payment of fines. The Ordinance is to a large extent modelled on the Money Payments (Justices Procedure) Act, 1935, and certain provisions of the Criminal Justice Administration Act, 1914, of the Imperial Parliament.

The Companies Ordinance, No. 51 of 1938.—The object of this Ordinance is to provide for a comprehensive law regulating companies. The existing Joint Stock Companies Ordinance, which was enacted as far back as 1861, does not apply to private companies, insurance companies, and banking companies, and is in several respects, unsuitable to modern conditions.

This Ordinance is based almost entirely on the Companies Act, 1929. The only point on which this Ordinance differs substantially from the English Companies Act is in regard to the provisions relating to banks. These provisions were introduced as it was felt that it would be unsafe to allow the formation of banking companies in Ceylon without greater safeguards than exist in England.

The Bank of Ceylon Ordinance, No. 53 of 1938.—This Ordinance provides for the establishment of a State-aided Bank in Ceylon, on the lines suggested by the Committee consisting of Sir John Caulcutt and Mr. R. A. Wilson. The Memorandum and Articles of Association submitted to the Secretary of State for the Colonies by the above-mentioned Committee have, subject to certain minor alterations, been incorporated in the Ordinance.

The Medical (Amendment) Ordinance, No. 55 of 1938.—This Ordinance, which amends the Medical Ordinance, 1927, prohibits the registration of aliens except with the approval of the Governor on the recommendation of the Executive Committee of Health.

The Village Communities Amendment Ordinance, No. 60 of 1938.—This Ordinance repeals sections 3 to 36 of the Village Communities Ordinance, No. 9 of 1924, and inserts new sections 3 to 63 in their place. The new sections are based on the provisions of the Local Government Ordinance, No. 11 of 1920, and are designed as far as possible to assimilate the powers, duties, and functions of Village Committees to those of District Councils. Three new Schedules have been added to the Ordinance.

The Rubber Control Ordinance, No. 63 of 1938.—The Rubber Control Ordinance, No. 6 of 1934, was enacted in order to give effect to an International Agreement which was signed at London on May 7, 1934. The text of that Agreement has since been modified, and the object of this Ordinance is to give effect to the revised Agreement for the regulation of the production and export of rubber.

The essential features of the Rubber Control Ordinance, No. 6 of 1934, have been retained as far as possible. Some of the old provisions have however been redrafted so as to avoid difficulties of administration or interpretation which have arisen from time to time.

This Ordinance is to be construed as one with the Rubber (New-planting) Ordinance, No. 38 of 1938.

The Imperial Lighthouse Service Goods (Rebate of Customs Duty) Ordinance, No. 64 of 1938.—Goods imported by the Imperial Lighthouse Service for the use of the Service are admitted free of customs duty. This Ordinance provides for a rebate of the import duty paid on articles purchased in Ceylon by the Imperial Lighthouse Service for the use of the Service. Provision is made for the re-imposition of duty in respect of any such article if it is subsequently sold in Ceylon.

The Prevention of Crimes Amendment Ordinance, No. 69 of 1938.—Under the Prevention of Crimes Ordinance, No. 2 of 1926, any person who has twice or ottener been convicted of a crime and sentenced to imprisonment for terms aggregating over one year, must, however trivial the crime may be with which he is subsequently charged, be committed for trial before a District Court. The general rule of English law is that the court of trial is determind by the nature of the offence charged and not by the character of the accused. This Ordinance therefore amends the principal Ordinance to secure the same result in Ceylon.

Factory and Labour Legislation.

The Shops Regulation Ordinance, No. 66 of 1938, introduces into Ceylon legislation, based on the principles of the English law, for the regulation of the employment of shop assistants and the control of the opening and closing hours of shops. The provisions of the new law will apply in the case of all premises in which any retail or wholesale trade or business is carried on, including any premises in which the business of a barber or hairdresser or the sale of articles of food and drink is conducted. Bazaars and sales of work for charity, the hawking of newspapers and the business of an undertaker will not be affected. In addition to these exemptions, regulations made by the Executive Committee of Labour, Industry and Commerce may exempt from the provisions of the Ordinance, premises in which any particular trade or business is carried on.

Subsidiary Legislation.

Apart from comprehensive sets of regulations made under the Fauna and Flora Protection Ordinance, No. 2 of 1937, the Manufacture of Matches (Regulation) Ordinance, No. 9 of 1938, the Savings Certificates Ordinance, No. 11 of 1938, the Tea Control Ordinance, No. 12 of 1938, and the Rubber Control Ordinance, No. 63 of 1938, the subsidiary legislation for the year was concerned only with the amendment of existing subsidiary legislation or the introduction of such legislation into new districts or areas.

CHAPTER XV.

Banking, Currency, Weights and Measures.

BANKS.

The following is a list of banks which have branches in Ceylon :—

Name of Bank ..	..	Imperial Bank of India
Address of Head Office	..	Madras
Branch in Ceylon	..	Prince street, Fort, Colombo
Agents in Ceylon	..	—
London Office ..	..	25, Old Broad street, London, E. C. 2

Name of Bank	National Bank of India, Ltd. (Incorporated in the United Kingdom)
Address of Head Office ..	26, Bishopsgate, London, E.C. 2
Branches in Ceylon ..	York street, Fort, Colombo; Ward street, Kandy; and Nuwara Eliya
Agents in Ceylon ..	Clark, Spence & Co., Galle
Bankers in the United Kingdom	The Bank of England; The National Provincial Bank, Ltd.; The National Bank of Scotland, Ltd.

Name of Bank	The Chartered Bank of India, Australia and China
Address of Head Office ..	38, Bishopsgate, London, E.C. 2
Branch in Ceylon ..	Queen street and Baillie street, Fort, Colombo
Bankers in the United Kingdom	The Bank of England; Midland Bank, Ltd.; Westminster Bank, Ltd.; National Provincial, Bank, Ltd.; The National Bank of Scotland, Ltd.; Lloyds Bank, Ltd.

Name of Bank	Hong Kong and Shanghai Banking Corporation
Address of Head Office ..	Hong Kong
Branch in Ceylon ..	24, Prince street, Fort, Colombo
Agents in Ceylon ..	E. Coates & Co. (Galle), Ltd., Galle
Bankers in the United Kingdom	Westminster Bank, Ltd.

Name of Bank	The Mercantile Bank of India, Ltd.
Address of Head Office ..	15, Gracechurch street, London, E.C. 3
Branches in Ceylon ..	Queen street, Fort, Colombo; 97, Queen's Hotel building, Kandy; and Church street, Galle
Agents in Ceylon ..	—
Bankers in the United Kingdom	The Bank of England; Midland Bank, Ltd.

Name of Bank	The Eastern Bank, Ltd.
Address of Head Office ..	2, and 3, Crosby square, Bishopsgate, London, E.C. 3
Branch in Ceylon ..	Main street, Fort, Colombo
Agents in Ceylon ..	—

Savings Banks.

There are two Savings Banks, viz., the Ceylon Savings Bank and the Post Office Savings Bank.

The Ceylon Savings Bank is a Government institution established in 1832. Accounts may be opened with a minimum deposit of 50 cents and not more than Rs. 2,000 can be deposited in one year irrespective of withdrawals. The maximum sum which a depositor may have to his or her credit is Rs. 6,000. Charitable institutions or societies may deposit Rs. 3,000 per annum up to a maximum of Rs. 9,000. The Bank allows interest at the rate of 3 per cent.

The Post Office Savings Bank is managed by the Post and Telegraph Department. Deposits and withdrawals can be made at any of the Post Offices in the Island. The first deposit is 50 cents and the minimum amount that can be deposited thereafter is 25 cents, and the maximum

---

* Suspended business on August 15, 1938, and is in liquidation.

per annum is Rs. 750 irrespective of withdrawals. The total amount which a depositor may have to his or her credit is Rs. 3,000. The rate of interest allowed is 2·4 per cent.—2 cents per month for each complete sum of Rs. 10.

Co-operative Societies.

There were on April 30, 1938, 1,299 registered Co-operative Societies in Ceylon, of which 4 were Co-operative Central Banks, 1,051 Village Credit Societies of Unlimited Liability, 58 Societies of Limited Liability, 96 Thrift and Savings Societies, 22 Supply (Stores) Societies, 35 Supervising Unions, 1 Co-operative Land Mortgage Bank, 1 Co-operative Federation of Unions, 3 Sales Societies, 15 Labour Societies, 2 Poultry Societies, 1 Co-operative Motor Boat Society, 1 Co-operative Union Hospital, 1 Co-operative Dairy, 1 Sports Society, 1 Ceylon Fruit and Minor Produce Society, 1, Desiccated Coconut Millers' Society, 1 Paddy Hullers' Society, 1 Pottery Society, 1 Cardamom Theft Prevention Society, 1 Better Living Society, and 1 School Supply Society. These societies had 55,726 members.

Statistics are compiled only at the end of the co-operative working year on April 30. Since then the following Co-operative Societies have been registered :—

Unlimited Credit	74
Limited Credit	5
Thrift and Savings Societies	6
Unions	7
School Supply Societies	4
Cardamom Theft Prevention	4
Supply Societies	2
Poultry Society	1
Better Living Society	1
Industrial Society	1
Textile Society	1
Dairy	1
	107

Working capital on April 30 was Rs. 4,519,641.

Loans are still made from the Local Loans and Development Fund to societies in those parts of the Island which are not yet covered by the Central Banks.

The staff of the Department, exclusive of the clerical staff, consists of 1 Registrar, 1 Deputy Registrar, 4 Assistant Registrars, 34 Inspectors, 11 Sub-Inspectors, and 1 Supervisor, Labour Societies. The Sub-Inspectors and the Supervisor, Labour Societies, are not Government servants and are paid from the Audit and Supervision Fund out of the contributions made by societies and supplemented by a Government grant.

CURRENCY, &c.

The monetary unit in Ceylon is the Indian silver rupee, which is divided into 100 cents. The following fractions of the rupee are coined :— (1) Silver, 50-cents piece ; 25-cent piece ; and 10-cent piece ; (2) nickel 5-cent piece ; (3) copper, 1-cent piece and ½-cent piece.

The chief medium of exchange in Ceylon is the currency notes issued by the Government of Ceylon. They are of the following values :— Rs. 1,000, Rs. 500, Rs. 100, Rs. 50, Rs. 10, Rs. 5, Rs. 2, and Re. 1. The present value of the rupee is about 1*s.* 6*d.*

WEIGHTS AND MEASURES.

The standard weights and measures are the English units. In conjunction with these many local weights and measures are used.

CHAPTER XVI.

Public Finance and Taxation.

Revenue and Expenditure.

The revenue of the Island in the last five completed financial years was :—

	Rs. c.		Rs. c.
1933–34 ..	104,100,361 7*	1936–37 ..	119,196,899 52†
1934–35 ..	98,993,551 55	1937–38 ..	113,347,590 59‡
1935–36 ..	102,770,506 64		

The following is a statement of the expenditure in the same financial years :—

	Expenditure chargeable to General Revenue including accumulated Surplus Balances Rs. c.	Expenditure chargeable to Revenue pending raising of Loan Funds. Rs. c.
1933–34 ..	93,444,581 34 ..	—
1934–35 ..	107,286,124 66§ ..	—
1935–36 ..	109,740,474 82‖ ..	1,177,961 81
1936–37 ..	108,778,780 43¶ ..	—
1937–38 ..	115,337,266 36** ..	—

Public Debt.

On September 30, 1938, the sterling debt of the Island stood at £12,243,775 and the rupee debt at Rs. 30,941,000 towards redemption of which were held securities and moneys amounting to £4,724,404 and Rs. 3,314,727.

Setting off the securities against the debts and effecting conversion at 1*s.* 6*d.* to the rupee the net total Public Debt of the Island amounts to Rs. 127,884,553 which is slightly greater than the revenue for the year ended September 30, 1938.

The following summary gives particulars of the public debt together with the value of the sinking fund in respect of each loan forming the debt :—

Sterling Loans. £.				Sinking Fund. £.
2,850,000	3%	Inscribed Stock,	1940	3,327,700
800,000	3¼%	,,	1959	27,721
1,000,000	4%	,,	1939/59	413,739
4,500,000	3%	,,	1959/64	222,315
1,250,000	5%	,,	1960/70	72,333
1,843,775	4½%	,,	1965	106,205
—		Supplementary Sinking Fund	.. ..	554,391
12,243,775				4,724,404
@ 1*s.* 6*d.* = Re. 1				@ 1*s.* 6*d.* = Re. 1
= Rs. 163,250,333				= Rs. 62,992,053

Rupee Loans. Rs.			Sinking Fund. Rs.
3,000,000	4%	Inscribed Stock, 1942/44	3,314,727
27,941,000	3½%	Registered Stock & Promissory Notes, 1957/62 ..	—
30,941,000			3,314,727
Rs. 194,191,333			Rs. 66,306,780

* Includes Rs. 4,339,061·10, being surplus in the Sinking Fund of the 4 per cent Inscribed Stock, 1934.

† Includes Rs. 13,847,174·87 recovered from Loan, being expenditure met from Surplus Balances in previous years pending raising of Loan.

‡ Includes Rs. 25,036·20 recovered from Loan, being expenditure met from Surplus Balances in previous years pending raising of Loan.

§ Includes Rs. 2,190,172·45, being expenditure charged to Special Reserve.

‖ Includes Rs. 1,035,442·45, being expenditure charged to Special Reserve.

¶ Includes Rs. 242,464·51, being expenditure charged to Special Reserve.

** Includes Rs. 627,075·78, being expenditure charged to Special Reserve.

ASSETS AND LIABILITIES.

The assets and liabilities of the Island on September 30, 1938, were as follows :—

The assets consisted of—

	Rs.	c.
(1) Cash in the hands of the Deputy Financial Secretary, in fixed or current deposit in Banks and with the Crown Agents in London	19,413,420	69
(2) Unissued stores, investments in rupee and sterling gilt edged securities, advances to the General Manager of the Railway, other recoverable advances, security deposits in banks, &c., remittances in transit investments on behalf of the Ceylon University Building and Equipment Fund and suspense account	35,312,683	22
	54,726,103	91

The liabilities consisted of—

(1) Widows' and Orphans' Pension Fund	12,975,946	89
(2) Ceylon University Building and Equipment Fund ..	4,969,063	39
(3) Loan Funds	6,820,488	28
(4) General Reserve Fund	10,000,000	0
(5) Special Reserve Fund	959,523	51
(6) Courts suitors and other depositors in the Treasury and the Kachcheries	7,806,409	78
(7) Other Governments and agencies, loans to local bodies (sinking funds) and unpaid drafts	687,135	13
(8) Department of Government Electrical Undertakings ..	1,045,620	45
	45,264,188	3
Surplus	9,461,915	88
	54,726,103	91

Taxation and yield thereof—

The main heads of taxation and the yield of each are as follows :—

	Rs.	c.
Customs	56,222,468	6
Salt	2,223,470	38
Country and foreign liquor	8,136,350	80
Licences	736,004	10
Tolls	39,395	91
Stamp duties, including composition duty on Bank cheques and share certificates	3,075,562	20
Estate duties	1,010,032	1
Betting tax	299,812	80
Income tax	13,456,350	53
Tax on heavy oil motor vehicles	263,417	12
Contribution by Electrical Department in lieu of income tax ..	64,722	46
	85,527,586	37

Excise and Stamp Duties (*summarized*).—The amount realized from Excise revenue during the financial year under review was Rs. 8,136,350·80 and that in respect of Stamp Duties Rs. 3,075,562·20. Compared with the revenue of the last financial year, Excise revenue shows an increase of Rs. 412,766·22 and Stamp Duties a decrease of Rs. 895,010·90.

Revision of Taxes.—During the financial year under review the following changes in taxes were made :—

	Old Rate.		New Rate.	
	Preferential.	General.	Preferential.	General.
I. (*a*) *Import duties* :—				
(i) from November 27, 1937, Goods, Wares and Merchandise—	Rs. c.	Rs. c.	Rs. c.	Rs. c.
Beedies	4 0 per lb.	4 75 per lb.	1 50 per lb. of their gross weight	2 0 per lb. of their gross weight
Beedy leaves	—	15% ad. val.	1 50 per cwt.	1 50 per cwt.

	Old Rate.		New Rate.	
	Preferential.	General.	Preferential.	General.
(ii.) from February 15, 1938—	Rs. c.	Rs. c.	Rs. c.	Rs. c.
Soap, toilet, perfumed and medicated ..	..12 0 per cwt. or 15% ad. val.*	..40 0 per cwt. or 35% ad. val.*	..15 0 per cwt. or 15% ad. val.*	..40 0 per cwt. or 35% ad. val.*
(iii.) from September 10, 1938—				
Studio cameras (including magazines, tripods, tilthead adapters, synchronous motors, camera motors, carrying cases, sound blimps and lenses), recorder outfits (including microphones for sound recorders), film printers, film editing tables, footage measures, synchronisers, microphone booms, processing plants and disc. recording machines for use in the production of 35 millimetre sound films for public exhibition, and component parts of any of the foregoing.	15% ad. val.	..25% ad. val.	..Fre e	..2½% ad. val.

(*b*) *Export Duties.*—

	Old Rate. Rs. c.	New Rate. Rs. c.
From February 26, 1938—		
Tea	..2 0 per 100 lb.	..1 50 per 100 lb.

II. *Income Tax.*—By Ordinance No. 3 of 1938 an additional income tax of 3 per cent. was imposed in lieu of estate duty upon the taxable income of every Hindu family and of every company whose shares are not movable property situate in Ceylon for the purposes of estate duty.

III. *Estate Duty.*—By Ordinance No. 1 of 1938, Estate Duty was reimposed on the estates of all persons dying on or after April 1, 1937, and leaving an estate exceeding Rs. 20,000 in value.

IV. (*a*) *Postal Rates.*—

Letters: Increase from 9 cents per oz. to 20 cents per ½ oz. to Empire Countries served by the "All-up" service.

Postcards: Increased from 6 cents per card to 10 cents per card to countries on the "All-up" service.

(*b*) *Money Order Rates* (*Changes*).—

Inland and Foreign Money Orders expressed in rupees :—

On sums not exceeding Rs. 20 = 20c. commission.
On sums exceeding Rs. 20 and not exceeding Rs. 600 = 20c. commission for each complete sum of Rs. 20 and 20c. for the remainder.

Orders expressed in Sterling :—

On sums not exceeding £1 = 25c. commission.
On sums exceeding £1 and not exceeding £40 = 25c. commission for the first sum of £1 and 20c. for each additional £1 or remainder.

Orders payable in Malaya :—

On sums not exceeding Rs. 20 or its equivalent in dollars = 20c. commission.
On sums exceeding Rs. 20 and not exceeding Rs. 600 or its equivalent in dollars = 20c. commission for each complete sum of Rs. 20 or remainder.

Orders payable in Netherlands East Indies :—

On sums not exceeding Rs. 20 or its equivalent in gilders = 30c. commission.
On sums exceeding Rs. 20 and not exceeding Rs. 600 or its equivalent in gilders = 30c. commission for each complete sum of Rs. 20 or remainder.

* Whichever produces the higher duty.

(c) *Ceylon Postal Orders.*—

50 cents to Rs. 3	=	5c. commission.
Rs. 4 to Rs. 10	=	10c. commission.

Telegraph Rates.—

Empire countries (except India and Burma)	=	85c. per word flat rate.

Imperial Coupons.—

Selling and exchange value .	=	20c. per coupon.
Penny and Half-penny stamps	=	6c. and 3c. respectively.

CURRENCY.

On September 30, 1938, the value of the currency notes in circulation amounted to Rs. 45,080,984. The Commissioners of Currency on this, date held silver rupees to the extent of Rs. 14,404,053 and British, Indian, and Colonial securities amounting to Rs. 40,207,671 (cost price) or Rs. 41,088,998 (market price).

The value of the reserve on September 30, 1938, was thus in excess of the value of the notes in circulation by Rs. 9,530,740 taking the investments at cost price.

During the year silver rupees to the extent of Rs. 192,000 were received from the public and the banks in exchange for currency notes.

Subsidiary coin of various denominations amounting in all to Rs. 12,066,529 was in circulation in the Island on September 30, 1938.

EXCHANGE.

The rates of exchange on London on December 31, 1938, were as follows :—

Selling demand	1*s.* 5 15/16*d.* to the rupee
Selling telegraphic transfer	1*s.* 5 15/16*d.* to the rupee
Buying demand	1*s.* 6*d.* to the rupee

ESTATE DUTIES.

Estate duty was reintroduced in the Island by Ordinance No. 1 of 1938 with retrospective effect from April 1, 1937. Estates which are over, Rs. 20,000 in value are chargeable to estate duty. The Ordinance introduced a new principle in determining the rate of duty, viz., that the value of property situate outside Ceylon not liable to Ceylon estate duty should be included for determining the rate of duty chargeable on the Ceylon estate. The nett revenue from Estate Duty for the financial year 1937–38 is Rs. 1,010,032, as against Rs. 607,819 for the previous year.

CHAPTER XVII.

Miscellaneous.

LAND.

THE climate varies considerably in different parts of Ceylon, and this fact has an important bearing on the development of land in the Island. There are two main climatic divisions, namely, the wet zone (comprising the centre and south-west of the Island) and the dry zone (comprising the northern and eastern parts).

The wet zone is the part of the Island, roughly a quarter of it, that receives the rain of the south-west monsoon. The rainfall in this zone is both ample and well distributed, with the result that conditions are

Photo by Werner Conitz. *Courtesy Govt. Tourist Bureau.*

TENNIS TOURNAMENT.

favourable for agriculture. Tea, rubber, coconuts, and other economic crops can be grown readily, and under normal conditions profitably. As a result of the international agreement to restrict the production of tea and rubber these products may not now be grown. In addition, village cultivation flourishes. For many years past the wet zone has steadily developed, and the population has increased considerably. At the present time, this zone contains the greater part of the population of the Island, and there is comparatively little land available for development except in remote or inaccessible districts.

In the dry zone, on the other hand, conditions are far less favourable. In the first place, the rainfall, though not really inadequate, is so unevenly distributed that the country suffers badly from drought each year, except where extensive storage tanks have been constructed. In the second place, a large part of the dry zone is extremely malarial.

For these reasons, the greater part of the dry zone is thinly populated and practically undeveloped. Where the land can be irrigated or the rainfall is favourable paddy is grown ; and a certain amount of land, chiefly near the coast, has been planted with coconuts. Most of the villagers, however, are mainly dependent on " chena " cultivation, that is to say, the periodical clearing and cultivation of tracts of jungle, which are abandoned after one or two crops of grain or vegetables have been grown on them. Systematic farming is unknown. Attempts are being made to develop this area.

A great obstacle to land development is the fact that land titles are often both complicated and uncertain. This is due to two main causes, the claims of the Crown and the absence of any system of registration of title.

In general, all undeveloped land is presumed by law to be the property of the Crown till the contrary is proved. It is clear, however, that to insist that this presumption shall be strictly applied is likely to lead to hardship in many cases. Legislation has therefore been passed providing machinery for dealing with the claims of private persons to land to which the presumption in favour of the Crown applies. The law on the subject is contained in the Land Settlement Ordinance, 1931, as amended by Ordinance No. 22 of 1932 and Ordinance No. 31 of 1933. A special department—the Land Settlement Department—has been organized for the purpose of systematically dealing with all the undeveloped land in the Island under these Ordinances. This undertaking involves a great deal of work, however, and is not likely to be completed for many years.

The need for a system of registration of titles to land has long been recognized, and in 1933 a Committee was appointed to consider this question. The Committee has submitted a report containing proposals for a system of registration of titles suitable to the conditions prevailing in Ceylon, and steps are now being taken to draft the necessary legislation.

Till recently it was the practice not to advertise any Crown land for sale or lease unless some one had applied for that land. When such an application was received, steps were taken to survey the land, and eventually to dispose of the freehold or leasehold by public auction. This system had many disadvantages. Long delays were almost inevitable ; the original applicant could not be sure of obtaining the land he wanted, at any rate at a reasonable price ; the development of the available land was haphazard rather than systematic ; and there was a tendency for the needs of the villagers to be overlooked.

The present policy is for Government to take the initiative in disposing of Crown land. As a necessary preliminary, the Crown land in each village is " mapped-out ", that is to say, it is allocated to various definite purposes in the following way. In the first place, land is set aside for the needs of the State and of the permanent village population. The next consideration is to reserve land for alienation to villagers who are unable to get land in their own villages and are prepared to move to localities where land is available. If possible, land is then provided for development by Ceylonese of moderate means. Any land remaining is made available for alienation to other persons, irrespective of their means or race. Once a village has been mapped-out, the Revenue Officer in charge of the district can dispose of the Crown land in that village without fear of overlooking the interests of any part of the community. He is therefore able to take the initiative, and periodically offer land for disposal if he thinks there is likely to be a demand for it. Persons who receive land under this system are put in possession with the least possible delay.

A further change is in the tenure of land alienated by the Crown. Hitherto the only tenures have been freehold and leasehold, but a new tenure was introduced by the Land Development Ordinance, No. 19 of 1935, which came into force on October 15, 1935. The principal features of this tenure are as follows :—

(*a*) The owner is obliged to cultivate the land, or utilize in some other way specified in the grant.

(*b*) The owner is required to make a small annual payment to the Crown in perpetuity.

(*c*) The land cannot be subdivided beyond the limit specified in the grant, or held in undivided shares smaller than the fraction specified.

(*d*) The succession to the land is not regulated by the ordinary law of inheritance, but by special rules designed to prevent the land from being subdivided.

(*e*) In certain cases, the owner is forbidden to lease or mortgage the land except to the Crown, and may not otherwise dispose of it without the Revenue Officer's consent.

In rural areas, the general policy now is to alienate Crown land required for agricultural purposes by peasants and Ceylonese of moderate means under the Land Development Ordinance. In urban areas the mode of alienation is normally by long lease. Outright sales of Crown lands have been reduced to a minimum.

The Ordinance provides adequate machinery for enforcing the conditions of the tenure.

It is the present policy of Government not only to take the initiative in bringing land forward for disposal but also to provide a positive stimulus to landless villagers to leave their homes and either take up land in less congested villages or found new villages in undeveloped districts. Thus, " colonization schemes " have been started in various parts of the Island, and those willing to take part in these schemes have been helped with grants of land and money. Provision is made for affording financial assistance to colonists and peasants who take up land under the new tenure.

The villagers are conservative, and as a rule are very reluctant to leave their homes. On that account, progress with colonization schemes has necessarily been slow, and is likely to remain so for some time to come.

Eventually, however, it is hoped that the villagers will become less reluctant to leave their homes, and the congestion caused by the growth of the population will cause an increasing number to migrate each year. In this way it should be possible gradually to reclaim large tracts of the dry zone, which are now almost uninhabited, but which formerly supported a large population.

One of the greatest difficulties that the village cultivators have to contend with is that of disposing of their produce at a remunerative price. On this account, a new department has recently been formed, which is responsible for the development of agricultural marketing. Satisfactory progress has already been made, and it is hoped that, as the organization of this department develops, it will become possible for villagers, even in remote parts of the Island, to dispose readily of their surplus produce.

Production Forests.

A large portion of the Island is still, in spite of agricultural development, &c., covered with forest of one kind or another. Most of the forests are situated in the more remote, inaccessible or sparsely populated parts of the country. Consequently the largest tracts are to be found in the Dry Zone—Northern, North-Central, Eastern and parts of the North-Western and Uva Provinces.

All the Crown land bearing forest is divided into two main categories, viz., that in charge of the Forest Department and that in charge of the Revenue Officers.

The forest land administered by the Forest Department represents practically all the forests which the Government intends to keep permanently as forest bearing land, while most of the land in the care of the Revenue Officers is available for agricultural and other developments.

The Forest Reserves and Proposed Reserves, which are the forests administered by the Forest Department, may be divided into several groups, viz., forests intended primarily for the production of timber and fuel, those intended for purely protective, climatic or scenic purposes and those intended for the protection of wild animals, birds, and plants.

The total area of Forest Reserves and Proposed Reserves at the end of 1938 is given in the table below, together with the localities in which they are situated :—

Locality.	Production Forests. (area in acres).	Protective Forests. (Climatic) (area in acres).	Protective Forests (Fauna and Flora) (area in acres).
Northern Province ..	455,743*	Nil	42,890*
	58,378		31,580
North-Central Province ..	23,959*	Nil	298,878*
	481,497		11,780
Eastern Province ..	449,557*	Nil	17,555*
	402,472		44,171
North-Western Province ..	88,372*	1,323*	117,382*
	241,571	12,136	Nil

Totals ..	1,122,118*	37,431*	689,096*
	1,385,283	65,446	188,287

Grand Total .. 3,487,661 acres.

* Areas already Reserved by Proclamation.

The forests of Ceylon vary much in appearance and composition according to the particular Climatic Zone in which they are found. These Climatic Zones are usually referred to as the " Dry Zone ", " Wet Zone ", " Intermediate Zone ", and " Montane Zone ".

The Dry Zone forests belong to the " Tropical Dry Evergreen " type. The principal economic timber trees found in this type are Satinwood (Chloroxylon swietenia), Ebony (Diospyros ebenum), Palu (Manilkara hexandra), Ranai (Alseodaphne semecarpifolia) and Halmilla (Berrya cordifolia). It is from these forests that most of the heavy hardwoods supplied to Government Departments for railway sleepers, buildings, bridges, harbour works, &c., come, while the valuable satinwood is also confined to this zone. Most of the Dry Zone forests are managed on a selection system with a girth control limit for exploitation. Some areas in this zone have been planted with teak, which does not occur naturally in Ceylon.

The Wet Zone Forests are the " Tropical Wet Evergreen " type. These forests are characterized by being composed of a very large variety of species most of which yield timber of somewhat inferior and non-durable quality. An important tree found in this zone is Hora (Dipterocarpus zeylanicus) the timber of which is of considerable commercial importance, while trees producing timbers considered suitable for box making and match making occur in large quantities. Up to the present these forests have not been brought under organized management.

The Intermediate Zone, as the name implies, is the Climatic Zone between the Dry, Wet, and Montane Zones. It is comparatively small in extent and contains little crown forest. It is in this zone several of the most valuable of the timber trees grown in Ceylon are found. The most important of these are Jak (Artocarpus integra), Lunumidella (Melia composita), Milla (Vitex pinnata) and the exotic large leaved mahogany (Swietenia macrophylla). These species are grown in artificially established plantations of which there are now approximately 4,600 acres in this zone.

The Montane Zone forests are of the usual " Tropical Montane " type. They are primarily of importance as Protective forests and for their æsthetic value. Some of these forests are at present managed on a clear felling system followed by the establishment of plantations of exotics, principally the Monterey Cypress (Cupressus macrocarpa) and a variety of different Eucalyptus species. There are approximately 5,900 acres of these plantations. These areas are utilized to supply fuel to towns and estates situated in that zone.

The Forest Policy of Ceylon is to make the Island as far as possible self-supporting in respect of its timber and fuel requirements. At present large quantities of timber are imported, principally teak for constructional purposes and softwoods for the shipment of economic products, such as tea, rubber, desiccated coconut, &c. Little timber is exported from Ceylon, except high grade satinwood. The Central Timber Depot, where Government timber for export is stored, is at Slave Island, Colombo.

The Forest Department, which is under the general control of the Executive Committee of Agriculture and Lands, has its headquarters in the Secretariat, Colombo. In addition to the Conservator of Forests, the following forest officers have their offices at Headquarters :—

The Divisional Forest Officer, Working Plans.
The Divisional Forest Officer, Silvicultural Research.
The Divisional Forest Officer, Utilization Research.

Territorial Divisional Headquarters are situated at—

Colombo	..	.. South-Western Division
Kurunegala	..	.. North-Western Division
Jaffna	..	.. Dry Zone Division
Nuwara Eliya	..	.. Up-country Division

Though for many years the forests of Ceylon have been unsystematically exploited, the activities of the Forest Department are now directed to see that the forests are brought under regular management and the yield permanently sustained. For this purpose careful stock maps showing the contents of the Forest Reserves are being prepared and Working Plans compiled to control and systematize management.

Silvicultural Research is being organized on more comprehensive and intensive lines than hitherto with a view to collecting the necessary silvicultural information on which satisfactory Plans of Management may eventually be framed. The work has a completely untapped field before it and, as is to be expected, it has almost from every aspect to start " ab initio ".

Experiments are in hand for the greater utilization of indigenous timbers. " Ascu " treated sleepers of five species along with controls have been put out on the railway lines and are under observation. Logs of seventeen species were sent to England for test as to their suitability for Plywood and Veneers. Tests are also in hand of various species for the Chest and Match Industries.

The Fauna and Flora Protection Ordinance, No. 2 of 1937, was brought into force as from March 1, 1938. Under the provisions of the Ordinance, the Conservator of Forests has been appointed Warden and an Assistant Conservator of Forests as his Deputy. All Government Agents and Assistant Government Agents have been appointed District Wardens. An extent of 508,228 acres of Crown land has been declared National Reserves under this Ordinance, and Sanctuaries covering an extent of 180,866 acres have also been proclaimed.

SURVEY.

The Survey Department.—As no land can be alienated or otherwise dealt with by the Crown until it has been surveyed and demarcated, the work of the Survey Department is of great importance. Its chief activities may be summarized as follows :—

(*a*) Application Surveys, *i.e.*, a system of sporadic surveys, usually made on " Applications " by members of the public, to buy or lease Crown land, or on " Crown Requisitions " from Government officials for such surveys.

Included under this head are :—

(i.) Acquisition Surveys, or surveys undertaken for the acquisition of private land for Government or public purposes.

(ii.) Town Surveys—to further the development, the administration, and the assessment of towns by Local Bodies, and to assist town planning schemes.

(iii.) Forest Surveys, which include the demarcation of forest boundaries and fauna or flora reserves.

(iv.) Land Development Surveys or surveys arising from the Land Development Ordinance, No. 19 of 1935, which provides for the systematic development and alienation of Crown lands in the Island.

(v.) Engineering Surveys which are chiefly undertaken with a view to providing plans and sections for use in the investigation and development of irrigation schemes by the Irrigation Department.

(*b*) Block Surveys, or the continuous survey of large areas of land for the final settlement of claims as between the Crown and private owners.

Topographical Surveys.—In addition, the Survey Department, having completed a Topographical Survey of the Island, is now engaged upon a Topographical Revision Survey. Sectional maps for the whole Island on the scale of 1 mile to the inch can be obtained at the Surveyor-General's Office, Colombo, at "Ceylon Products", Chatham street, Colombo. Numerous other small scale maps are also published. The chief of these are :—

4-mile and 8-mile to the inch maps of the Island.
6-mile to the inch motor maps.
4-mile and 24-mile to the inch agricultural maps.
Aviation map of Ceylon and South India on the scale of 1/1,000,000.

Models.—The following can also be obtained from the Surveyor-General's Office, Colombo :—

(*a*) Plaster of Paris and Paper Models on a horizontal scale of 1 mile to 1 inch, and a vertical scale of ½ mile to 1 inch.
(*b*) 8 mile Paper Models on a horizontal scale of 42,240 feet to one inch and a vertical scale of 8,290 feet to one inch.
(*c*) Bas Relief Maps on a scale of 1 : 1,000,000 or 15·78 miles to one inch.

Other Work of the Survey Department.—The other work of the Survey Department is not directly connected with the subject of this chapter. It includes—

(1) Trigonometrical Surveys.
(2) Precise Levelling.
(3) The Observatory and Meteorological Stations.
